Additional District 4 Projects

Project Overview	Current Project Information	Notes
		Use this space to make notes on the project
Municipality	Arlington/Cambridge	
Project Proponent	Needs Assessment	
Project Name	Arlington, Cambridge - Routes 2A/16	
Project Description	This project will design and implement as appropriate safety and	
- <b>1</b>	operational improvements to the intersection of Routes 16 and 2A.	
	The scope could extend north and south along 2A (Massachusetts	
	Avenue) and east and west along Route 16 (Alewife Brook	
	Parkway) to create more comprehensive bus priority and	
	improved bicycle facilities in both municipalities and along Route	
	16. Route 16 and a small portion of Route 2A is owned by DCR. The	
	intersection signal equipment is owned by Cambridge. The project	
	area is in both Cambridge and Arlington.	
Project Impacts by MPO Goal Area		
Safety	Over the 2014-2016 period this location experienced 39 crashes, 7	
	of which involved bodily injury.	
System Preservation	N/A	
Capacity Management and Mobility	This intersection experiences severe AM and PM peak-period	
	congestion and is an MPO designated bottleneck. Improvements	
	are intended to focus on public transit and other sustainable	
	modes (to provide benefits to current riders and incentivize mode	
	shift) while improving flow and safety overall.	
Clean Air/Sustainable Community		
Transportation Equity	N/A	
Economic Vitality	The economic benefits of reducing transit delay and mitigating the	
	impacts of congestion at this intersection and along these	
	roadways will accrue to the entire region.

and intend to continue those facilities. There have been some         incremental changes to the Route 2A/15 intersection as a part of         the Arlington BRT pilot that took place in October 2018. DCR owns         the intersection here and Cambridge owns the traffic signals.         Cambridge changed the lane assignments going westbound and         eastbound on Mass Ave at this intersection, and changed the         signal phasing to accommodate the new assignments. They made         the EB/WB phases a split phase to allow eastbound and         westbound traffic to go independently from one another and allow         buses to travel EB from Arlington in the new right-turn only lane.         The phasing for Route 16/Alewife Brook Parkway did not change.         Cambridge has indicated that the signal changes have improved         traffic flow and they intend to do additional improvements in         spring 2019, specifically to include pavement markings to allow         northbound lefts from the center lane and installing upgraded         detection to optimize the signal. Both municipalities feel that these         improvements: can be built upon to create greater opportunities         for transit priority and improve bicycle and pedestrian safety and         connectivity to incentivize sustainable modes, better manage         regional congestion and meet transportation needs. All roadway         user should see safety and operational improvements at the

Project Overview	Current Project Information	Notes
		Use this space to make notes on the project
Municipality	Everett	
Project Proponent	City of Everett	
Project Name Project Description	Everett - Sweetser Circle (Route 16 and Route 99) This project will study and implement as appropriate safety and	
	operational improvements to the intersection of Route 16 and	
	Route 99. The parkway-style interchange is referred to as	
	Sweetser Circle and is owned by the DCR.	
	Project goals include creating dedicated ROW for bus lanes on	
	Route 99, dedicated ROW and possible station area for future	
	Silver Line, connections to regional trail system (Northern	
	Strand, Malden River and Chelsea Greenway, reclamation and	
	access to approximately 13 acres of green-space "trapped"	
	within the interchange.	
Project Impacts by MPO Goal Area		
Safety	Over the 2014-2016 period this location experienced 81	
	crashes, 27 of which involved bodily injury. The current facility	
	contains no bicycle facilities and pedestrian facilities that compete with high-speed vehicle traffic entering and exiting	
	the circle.	
System Preservation	The interchange contains four bridge structures, two over the	
	MBTA railroad and two over Route 16. At least one of the	
	bridges is structurally deficient. MassDOT project #608706	
	proposes to replace the bridge decks on all four bridges at an	
	estimated contract cost of \$16 million.	
Capacity Management and Mobility	This location experiences severe AM and PM peak-period	
	congestion and is an MPO designated bottleneck.	
	Serves all Wellington, Sullivan and Malden Center bus routes	
	running through Everett (8 total) carrying 11,413 daily bus riders in addition to 53,107 AADT vehicles. Currently contains	
	no transit priority despite existing dedicated bus lanes	
	operating north of the interchange and proposed lanes south	
	of the interchange. Currently contains no bike facilities despite	
	all approaches from Broadway, Main Street and Revere Beach	
	Parkway having bike facilities.	
	City of Everett is the only Inner Core community without rapid	
	transit or key bus route service. High dependency on local bus service of which all route utilize the Sweetser Circle	
	Interchange as well as all alternative modes including bicycles	
	and pedestrians intending to reach Boston/Cambridge. The City	
	of Everett is investing heavily in dedicated transit facilities as	
	well as bicycle facilities and bike sharing, all of which must	
	utilize Sweetser Circle. Improving service for all of these modes	
	depends on substantial improvements to Sweetser Circle to	
	match the City's investments.	
Clean Air/Sustainable Community	Dedicated ROW for bicycles local buses and future Silver Line	
	will reduce vehicle dependency and contribute to clean air and	
	a sustainable community.	
Transportation Equity	N/A	

This project is in an area which has some of the most convenient and cost-effective access the Boston and the Region for commercial activities, including heavy industry. Industrial and commercial activity are both increasing, and there is some housing creation at and near the edge of the industrial area. The Route 99, and Route 16, Second Street, Marginal Street (in Chelsea) and Eastern Avenue corridor has been designated by the MPO as a Critical Urban Freight Corridor and has been incorporated into the National Highway Freight Network. The City of Everett has permitted over 1,000 new residential units within a 1-mile radius of Sweetser Circle in the past two years. The inclusion of bicycle and rapid transit components to this project will increase mobility in nearby redevelopment areas including the Commercial Triangle (bounded by Rte 99, Rte 16 and MBTA rail) and Lower Broadway.	
Pre-PRC	
4	
process for Sweetser Circle. Implementation of dedicated bus lane on Route 99 SB approaching Sweetser Circle, 25% design plans for dedicated bus lane on Rte 99 SB leaving Sweetser Circle, Design an Construction of Northern Strand Bike Path extension (in progress), Construction of dedicated bicycle facilities on Route 99, Funding and implementation of Blue Bikes bike share system (launching spring 2019), Transit signal priority on Rte 99.
