June 2010

ABSTRACT

This Lynn Garage report belongs to a multivolume set of reports on the findings of a systemwide survey of Massachusetts Bay Transportation Authority riders that was conducted for the MBTA by the Central Transportation Planning Staff (CTPS) in 2008–09. This survey covers all of the modes operated by the MBTA: bus (including trackless trolley), bus rapid transit,¹ heavy rail (the Blue, Red, and Orange Lines), light rail (the Green Line and the Mattapan High-Speed Line), commuter rail, and boat. The most recent comparable systemwide passenger survey was conducted during 1993–2000.

The purpose of the systemwide survey was to gather data that are not easily obtained through any other means. The data are used to update the regional travel-demand model that is routinely used by the Boston Region Metropolitan Planning Organization (MPO); they are also available for use by other entities, public and private, as well as interested individuals.

This report comprises 12 chapters and two appendices. In the chapters, data tables and summary text present information about travel on Lynn Garage bus routes, including why trips are made, where riders are coming from and going to, and how riders get to and from the service. Information is also provided on the demographics of bus riders, as well as their automobile ownership, how they pay their fares, and how they perceive the quality of MBTA bus service. The second chapter of this report provides an overview of the results for the entire Lynn Garage, while each subsequent chapter covers one or more types of data on a route-by-route basis.

¹ Reports on bus rapid transit (the Silver Line) are included in the set, although their data are from surveys conducted by CTPS in 2005 and 2006.

Introduction

1.1 THE SYSTEMWIDE SURVEY

This report belongs to a multivolume set of reports on the findings of a systemwide survey of Massachusetts Bay Transportation Authority riders that was conducted for the MBTA by the Central Transportation Planning Staff (CTPS) in 2008–09. This survey covers all of the modes operated by the MBTA: bus (including trackless trolley), heavy rail (the Blue, Red, and Orange Lines), light rail (the Green Line and the Mattapan High-Speed Line), commuter rail, and boat. Reports on bus rapid transit (the Silver Line) are included in the set; their data are from surveys conducted by CTPS in 2005 and 2006. Separate survey instruments were developed for each mode, but the same categories of information were gathered through each.

The purpose of the systemwide survey was to gather data that are not easily obtained through any other means. Some of the data will be used to update the regional travel-demand model that is routinely used by the Boston Region Metropolitan Planning Organization (MPO) to estimate the future impact of projects on the transportation network. In addition, as with past surveys, the data obtained through this survey will be available for use by the MBTA, CTPS, the Massachusetts Department of Transportation, other transportation agencies, academic researchers, consultants, and private citizens.

The most recent comparable systemwide passenger survey was conducted during 1993–2000. Most of the commuter rail system was surveyed in 1993, except for the Old Colony Lines, which were surveyed in 1998. The heavy rail and light rail networks were last surveyed in 1994, and the bus and trackless trolley lines in 1995. Commuter boat and ferry services were surveyed in 2000. The results of this systemwide survey have become outdated.

1.2 LYNN GARAGE SURVEY METHOD

This volume presents the survey results for passengers riding the bus routes that are based at Lynn Garage (114, 116, 117, 119, 120, 121, 424W, 426, 428, 429, 434, 435, 436, 439, 441, 442, 448, 449, 450, 451, 455, 456, 459, 465); these routes, along with the MBTA's other bus routes, belong to the local bus component of the MBTA system.

The local bus survey form, a copy of which may be found in Appendix B, contained 24 questions (33 questions, including subquestions). The questions were designed to gather data regarding the specific trip each rider was making when he or she received the survey form (such as trip origin, destination, and purpose), as well as demographic data (such as rider age, gender, income, and ethnicity) and subjective views of the rider regarding service quality. Also, at the end of the survey form, space was provided in which the rider could write comments and suggestions of his or her own choosing.

Survey forms were offered to all riders riding Lynn Garage bus routes between 6:00 AM and 3:30 PM on a typical weekday in 2008 or 2009. This distribution strategy was designed to provide approximately 85% of the weekday riders on the bus routes with an opportunity to receive a survey form during what would be considered typical travel conditions.¹ Completed survey forms could be returned to the survey distributors or Customer Service Agents in the stations, or could be mailed in postage-free. Also, the riders were informed that they could use an online survey form instead of the paper form.

As in any survey with a response rate of less than 100%, the data that were collected needed to be “expanded.” The survey responses from each route were weighted to equal typical boardings during the survey hours using the most recently available ridership figures.

The survey results were entered into a computerized database from which responses to selected combinations of questions can be summarized at any level of aggregation. The particular data tables that have been generated and presented in this volume are ones that will be useful to this report’s anticipated users. Other, more specialized tables can be generated if needed.

1.3 ORGANIZATION OF DATA IN THIS REPORT

The types of data reported in each chapter are listed below. After Chapter 2’s overview of all of the types of data at the level of all Lynn Garage bus routes as a whole, each chapter presents a certain type (or set of types) of data by bus route. Each chapter’s data are for the passengers who rode some portion of the surveyed route. Each chapter provides any explanations of the tables that are called for and presents an overview of notable findings.

In each chapter, there is a table or set of tables for each bus route. The nature of the type (or types) of data presented in the tables is discussed and, if called for, the way in which the tables present the data is explained. In addition, an overview of notable findings is provided.

Chapter

- 2 Results for the Lynn Garage Bus Routes as a Whole:** An overview of the results for the Lynn Garage bus routes as a whole.

¹ Surveys were not distributed on Monday mornings or Friday afternoons, as the travel at these times is typically lighter than at other times during the week.

- 3 Trip Purpose, Reasons for Using the MBTA, and Alternative Means:** For each Lynn Garage bus route:
 - Why riders made their trips
 - Why riders used the MBTA to make their trips
 - What mode or modes each rider used if he or she sometimes made the same trip by means other than the surveyed bus route
- 4 Origin Locations and Activities:** For each Lynn Garage bus route:
 - Where riders started their trips (by city or town, or by neighborhood of Boston, Cambridge, Somerville, or Brookline)
 - What activities riders were engaged in at those origin locations (for example, work, home, school)
- 5 Access to the Bus:** For each Lynn Garage bus route:
 - What mode riders used to access the surveyed bus route, such as walking, biking, other transit mode, etc.
 - What mode riders who began their trip on another fixed-route transit service used to access that transit service
 - The initial transit mode riders used on their overall trips
 - Which connecting and nonconnecting bus routes, if any, riders transferred to the surveyed bus route from
 - For riders who accessed the surveyed bus route by any mode other than transferring from a fixed-route transit service, how long it took them to travel from their overall trip origin to the stop where they boarded the surveyed bus route
- 6 Egress from the Bus:** For each Lynn Garage bus route:
 - How riders completed their trips after leaving the surveyed bus route (walk, bike, bus, rapid transit, commuter rail, etc.)
 - How riders who ended the transit portions of their trips on another fixed-route transit service completed their trips
 - The final transit mode used on riders' trips
 - Which connecting and nonconnecting bus routes, if any, riders transferred from the surveyed bus route to
 - For riders who left the surveyed bus route by any mode other than transferring to a fixed-route transit service, how long it took them to travel from the stop where they left the surveyed bus route to their overall trip destination

- 7 Destination Locations and Activities:** For each Lynn Garage bus route:
 - Where riders ended their trips (by city or town, or by neighborhood of Boston, Cambridge, Somerville, or Brookline)
 - What activity riders were going to engage in after completing their trips (for example, work, home, school)
- 8 Origin-Destination Cross-tabulation:** For each Lynn Garage bus route:
 - Where riders began their trips (by city, town, or neighborhood)
 - Where riders ended their trips (by city, town, or neighborhood)
- 9 Socioeconomic Characteristics:** For each Lynn Garage bus route:
 - Riders' age, gender, household income, and ethnicity
- 10 Usage Rates and Fare Types:** For each Lynn Garage bus route:
 - How frequently riders used the system
 - How riders paid their fares
 - How the different fare-payment methods were related to how frequently riders used the system
- 11 Vehicle Availability:** For each Lynn Garage bus route:
 - How many riders had driver's licenses
 - How many vehicles riders had in their households
 - Whether riders had access to the use of household vehicles for the trips they were making when surveyed
 - The number of vehicles owned per capita for riders on the surveyed route
- 12 Service Quality:** For each Lynn Garage bus route:
 - Riders' perceptions regarding several aspects of MBTA service quality

2

Results for the Lynn Garage Bus Routes as a Whole

The tables and text in this chapter provide an overview of the survey results for the Lynn Garage bus routes as a whole and highlight some of the more important findings. Each of the subsequent chapters presents a particular category (or set of categories) of data for each Lynn Garage bus route. Explanations of the nature of the data categories are provided in the subsequent chapters. In those chapters, the data tables present, for each bus route, findings on passengers who rode some portion of that route.

Each of the following numbered sections except 2.11 corresponds to one or more tables that are located at the end of this chapter.

2.1 TRIP PURPOSE, REASONS FOR USING THE MBTA, AND ALTERNATIVE MEANS

Trip Purpose Slightly less than 90% of the trips made on Lynn Garage bus routes were in one of the seven categories that are “home-based” (that is, home was either the origin or destination of the trip). A majority of these (51% of all trips) were “home-based work” (either heading to work from home or to home from work). Of the other six types of home-based trips, “home-based school” had the second-largest percentage of all trips (10%), followed by “home-based shopping” (9%).

“Work-based” trips (those with one end at work and the other end not at home) accounted for 5% of all bus trips. Combining those trips with home-based work trips and home-based work-related trips shows that 59% of all trips had work or a work-related activity as one end of the trip.

Reasons for Using the MBTA The most common reason for using a Lynn Garage bus route was convenience (55%). The next-most-common responses were “only transportation available” (43%), “less expensive than other choices” (36%), and “avoid driving/traffic” (26%). The least common reason was “speed/travel time” (16%).

Alternative Means When asked whether they would make the same trip by other means on days that they did not use the surveyed bus route, 52% of the respondents answered “yes.” Of those riders, the largest number (42% of the surveyed bus riders) indicated that they would use another MBTA service. The

next-most-commonly selected travel mode options were “other” (27%), “drive alone” (23%), and “carpool/vanpool” (20%). (The respondents indicating “other” wrote in alternatives that included walking, taking a taxi, and being driven by someone else.) Some respondents reported more than one alternative mode.

2.2 ORIGIN LOCATIONS AND ACTIVITIES

Bus routes that are operated out of the Lynn Garage primarily serve Boston and towns lying north of Boston. The greatest number of riders on Lynn Garage bus routes reported starting their trip in these towns; the most common origins were East Boston (22%), Lynn (20%), Revere (15%), and Chelsea (12%).

The most common “activity” before boarding a Lynn Garage bus route was “home” (72%), followed by “work” (9%) and “personal business” (6%). These proportions of reported activities reflect a traditional morning commute pattern.

2.3 ACCESS TO THE BUS

The most common mode of access to Lynn Garage bus routes was walking, which accounted for 80% of the trips. The next-most-common access modes were transferring from rapid transit (11%), transferring from another MBTA bus (5%), and driving (2%). Private transportation modes (that is, any means other than using a fixed-route transit service) accounted for 84% of all access trips.

Public transportation modes accounted for the remaining 16% of all access trips to the bus; as for how these modes had themselves been accessed by riders, the most common method was walking, which accounted for 13% of the preliminary access trips. Of the first transit mode used on public transportation access trips to the bus, the most common mode was rapid transit (8% of the preliminary access trips) followed by another MBTA bus (6%).

The greatest number of riders directly transferring to the surveyed bus route from a connecting bus route transferred from Route 116 (10%). The greatest number of riders on the surveyed bus route who transferred from a nonconnecting bus route (that is, via an intermediate transit mode) transferred from the Massport shuttle at Logan Airport (18%).

Overall, people who walked to the place where they boarded the bus made the shortest access trips (7 minutes on average). People who drove themselves had the second-lowest average access time (9 minutes), and riders who were dropped off had the longest (11 minutes). Slightly more than 55% of the respondents made access trips of less than or equal to 5 minutes, and 84% made access trips of less than or equal to 10 minutes.

2.4 EGRESS FROM THE BUS

The most common mode of egress from Lynn Garage bus routes was walking, which accounted for 64% of the trips. The next-most-common egress modes

were transferring to rapid transit (28%) and transferring to another MBTA bus (4%). Private transportation modes (that is, any means other than using a fixed-route transit service) accounted for 68% of all egress trips.

Public transportation modes accounted for the remaining 32% of all egress trips from the bus; as for how riders left these modes themselves, the most common method was walking, which accounted for 28% of the preliminary egress trips. Of the final transit mode used on public transportation egress trips from the bus, the most common mode was rapid transit (25% of the preliminary egress trips) followed by another MBTA bus (5%).

The greatest number of riders directly transferring from the surveyed bus route to a connecting bus route transferred to Route 116 (16%). While the greatest number of riders on the surveyed bus route who transferred to a nonconnecting bus route (that is, via an intermediate transit mode) transferred to the Silver Line Washington Street (Route 749–15%).

Overall, people whose egress mode was walking made the shortest egress trips (7 minutes on average). People who drove themselves had the second-lowest average egress time (12 minutes), and riders who were picked up had the longest (16 minutes). Slightly less than 55% of the respondents made egress trips of less than or equal to 5 minutes, and 80% made egress trips of less than or equal to 10 minutes.

2.5 DESTINATION LOCATIONS AND ACTIVITIES

Bus routes that are operated out of the Lynn Garage primarily serve Boston and towns lying north of Boston. The greatest number of riders on Lynn Garage bus routes reported being destined for these neighborhoods; the most common destinations were East Boston (17%), Lynn (13%), Revere (11%), and Chelsea (10%).

The most common “activity” after leaving a Lynn Garage bus route was “work” (45%), followed by “home” (15%) and “other” (8%). These proportions of reported activities reflect a traditional morning commute pattern.

2.6 ORIGIN-DESTINATION CROSS-TABULATION

The most common origin-destination pair was a trip within East Boston (9% of all trips). The next-most-common pairs were trips within Lynn (6%) and East Boston to Chelsea (4%). In the top 25 origin-destination pairs, which make up 48% of all trips, Boston neighborhoods represent 20% of the origins and 40% of the destinations.

2.7 SOCIOECONOMIC CHARACTERISTICS

Slightly less than 75% of the riders were between the ages of 25 and 64, and 13% were college age (19–24). Fewer respondents to the survey were over the age of 65 (10%), and 3% were under the age of 19. This may be due to under-sampling and/or a low response rate among these two age groups.

Women made up 62% of Lynn Garage ridership, while men accounted for 38%. Two surveyed riders identified themselves as transgender.

Slightly more than 45% of the riders reported household incomes greater than \$60,000. The single most common income brackets selected were “under \$20,000” (29%) and “\$20,000–\$30,000” (12%). Unlike other garages, the smallest percentage of respondents selected “\$100,000 or more” (7%).¹ The average household size across all Lynn Garage bus routes was 2.64.

Slightly more than 65% of the riders self-identified themselves as white. The next-most-common race was “other” (15%), followed by black or African-American (14%). Of those respondents who chose “other,” which called for writing something in, many wrote in “Hispanic.” In response to a separate question, which asked riders if they were “Hispanic/Latino,” 23% of the respondents answered “yes.”

2.8 USAGE RATES AND FARE TYPES

Slightly less than 50% of those surveyed indicated that they used the surveyed bus route five days per week, and another 24% used it six or seven days per week. Only 4% of the riders reported that they used the route less than one day per week.

Of the riders who used the surveyed bus route on the weekend, the largest percentage used it “occasionally” on both Saturday and Sunday (35%), and another 19% of the weekend users used it “regularly” on both Saturday and Sunday. Slightly less than 30% of all Lynn Garage bus riders responded “not at all” to both the Saturday and Sunday usage questions.

Slightly more than 45% of the Lynn Garage bus riders paid their fares using a monthly pass, which they used 5.0 days per week on average. The largest percentage of monthly pass riders (24% of all riders) used the LinkPass, followed by the Local Bus Pass (7%). Slightly less than 50% of riders paid by the ride, with 30% using CharlieCards and 3% using CharlieTickets. It is not surprising that many more riders who paid by the ride used the CharlieCard, as single-ride CharlieTicket users pay a surcharge.

2.9 VEHICLE AVAILABILITY

A majority of Lynn Garage bus riders (56%) are licensed to drive, and 55% live in households with at least one vehicle. However, only 23% of the respondents had a household vehicle available to use for the surveyed trip instead of riding the bus, and, on a per capita basis, 66% of the riders owned fewer than 0.5 vehicles.

¹ The income ranges were selected to be consistent with the ranges used by the U.S. Census Bureau and in earlier MBTA systemwide passenger surveys.

2.10 SERVICE QUALITY

Survey respondents were asked to rate Lynn Garage bus service on a scale of “1” (poor) to “5” (excellent) by twelve measures of service quality. The rating “3” was labeled “average.” Most respondents rated the service quality for most measures as “3” or “4.” The two measures with the highest percentage of “excellent” (“5”) ratings were “announcement of stops” (40%) and “fare collection system” (28%), while the measure with the highest percentage of “2” ratings was “stop amenities (shelters, benches)” (17%).

Based on an averaging of all respondents’ ratings, the three measures rated most favorably were stop announcement, “safety and security,” and “signage on vehicles,” and the three measures rated least favorably were stop amenities, “frequency of service,” and “reliability (on-time performance).”

Respondents were also asked to indicate which three of the twelve service quality measures were most important to them. The top three were reliability, frequency, and safety and security.

2.11 COMMENTS AND SUGGESTIONS

Approximately half of the returned survey forms had comments written on them (either in the form’s Comments/Suggestions field or in the margins). These comments varied from vague positive and negative statements such as “Great job!” or “The T is run poorly” to specific suggestions such as “Need more bus service on #121 on Lexington Street. Need more weekend and evening service.” Many riders used the Comments/Suggestions field to complain about a specific issue; others used the space to suggest ideas about how the MBTA could improve their transit experience. The most common comments were complaints about unreliable service, discourtesy of MBTA personnel, overcrowded vehicles during peak hours, uncleanliness, and jerky stops and starts. Other common comments included requests for:

- More service (peak hour, early morning, late night, and weekend)
- More bus shelters, benches, and other station amenities
- Better communication about delays
- Real-time information available online and at bus stops
- Better coordination of schedules between different modes

In general, the passengers who wrote comments felt that the service reliability and frequency should be improved; however, a significant number of them indicated that they were satisfied with the existing service.

* The number of respondents who indicated that this service quality measure was one of the three most important to them. Many respondents checked no measures, while others checked more than three.

Trip Purpose, Reasons for Using the MBTA, and Alternative Means

The three types of data presented in this chapter, taken as a whole, could be said to “frame” the trips the riders made. These data help answer the questions: What kinds of trips were riders on the surveyed bus routes making? Why did they choose to use bus service? What were their alternatives?

The tables (at the end of the chapter) present these data by bus route. For each route, three tables presenting the three respective types of data are grouped on a single page. The data for each route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

3.1 TRIP PURPOSE

3.1.1 DESCRIPTION OF TABLE

The trip purposes table for each route shows the allocation of the trips among nine categories: home-based work, home-based school, home-based shopping, home-based social activity, home-based personal business, home-based work-related, home-based other, work-based, and non-home/non-work-based. This allocation was done using information from survey questions 4a and 9a: “Where were you before starting this entire one-way trip?” and “Where will/did this one-way trip end?” The actual origins and destinations (by municipality or neighborhood) of the trips by purpose are shown in Chapters 4 and 7, respectively.

Trips with home at either end were classified as home-based. For example, trips either from home to work or from work to home were counted as home-based work trips, and there was no “work-based home” category. Work-based trips were those with work at one end and an activity other than home at the other end. Non-home/non-work-based trips did not have home or work at either end.

For each of the trip purposes, the table shows the number of riders and the percentage that these riders represent relative to the total number of riders using the respective route who specified their activities at both trip ends. It also

gives the cumulative percentages that result as one adds each trip purpose category of riders to the ones preceding it in the table.

3.1.2 OVERVIEW OF RESULTS

On every route belonging to the Lynn Garage, the percentage of home-based trips exceeded that of non-home-based trips, and the most common trip purpose category was home-based work. The bus routes with the highest percentages of home-based work trips were Routes 439 (100%), 448 (96%), and 449 (95%).

Work-based trips typically composed a much smaller percentage of trips. This category included trips such as from an office to an off-site meeting, a restaurant, or a shop. The percentages of work-based trips across all Lynn Garage bus routes ranged between 0% on several routes and 10% on Route 117.

The percentages of home-based shopping trips across all Lynn Garage bus routes ranged between 0% on several routes and 26% on Route 114; the percentages of home-based school trips ranged between 0% on several routes and 25% on Route 455. Home-based other trips (trips for which riders identified home as the purpose at one end of the trip and “other” at the other end) ranged between 0% on several routes and 17% on Route 442.

The trip purpose results may have been affected by the survey distribution strategy, which captured riders on buses between the hours of 6:00 AM and 3:30 PM. The scope of the project did not allow for all-day distribution, although it was designed to provide 85% of weekday riders the opportunity to receive and complete surveys. In particular, trips in the evening to socialize and personal trips completed on the way home from work may have been underrepresented.

3.2 REASONS FOR USING THE MBTA

3.2.1 DESCRIPTION OF TABLE

The table for each route showing the reasons for using MBTA bus service summarizes the results from question 22 on the survey. This question listed eight possible reasons riders might have for using bus transit rather than some other mode of transportation. These were “convenience,” “speed/travel time,” “avoid driving/traffic,” “avoid parking at destination,” “environmentally responsible,” “less expensive than other choices,” “can read/do work on the train,” and “only transportation available.” There was also a space for writing in other reasons.

The table presents both the number and percent of riders who selected each reason. Riders were allowed to check as many reasons as they felt were relevant. Therefore the values in the “Number of Riders” column have not been totaled in the table; the number at the bottom of that column is the number of riders who checked at least one reason. The values in the “Percent of Riders”

column may add up to more than 100%. The percentages were calculated by dividing the number of responses for each reason by the total number of people who checked at least one reason.

3.2.2 OVERVIEW OF RESULTS

Responses varied across routes. The most frequently selected reason for using bus transit was “convenience.” The percentage of riders choosing “convenience” was highest on Route 434 (75%), followed by Routes 424W (73%) and 448 (71%).

The second- and third-most frequently selected reasons were “only transportation available” and “less expensive than other choices.” The percentage of riders choosing “only transportation available” was highest on Route 451 (57%), and the percentage of riders choosing “less expensive than other choices” was highest on Route 428 (62%).

The fourth- and fifth-most frequently selected reasons were “avoid driving/traffic” followed by “environmentally responsible.” The percentage of riders choosing “avoid driving/traffic” was highest on Route 424W (55%), and the percentage of riders choosing “environmentally responsible” was highest on Route 448 (71%).

3.3 ALTERNATIVE MEANS OF TRANSPORTATION

3.3.1 DESCRIPTION OF TABLES

The two tables for each route on alternative means of transportation summarize the results of question 13b, which asked riders to indicate whether they used other means of making the same trip on days when they did not use the surveyed bus route, and, if so, what mode or modes of transportation they used. The first table shows the breakdown of passengers responding “yes” and “no” to use of alternative modes. The second table shows, for riders responding “yes,” the number and percent checking off each listed mode. The modes listed were “drive alone,” “non-MBTA bus,” “carpool/vanpool,” “bicycle,” “other MBTA service,” and “other” with a write-in option.

Riders were allowed to check more than one mode. Therefore the values in the “Number of Riders” column have not been totaled in the table; the number at the bottom of that column is the number of riders who checked at least one mode. The values in the “Percent of Riders” column may add up to more than 100%. The percentages were calculated by dividing the number of responses for each mode by the total number of people who checked at least one alternative mode. Some riders indicated that they do use alternative modes of transportation but did not check any listed options (including “other”).

3.3.2 OVERVIEW OF RESULTS

Between 37% and 82% of the riders indicated that they had used other means of making the same trip. The percentage of riders answering affirmatively to

this question was highest on Route 121. The most common alternative mode of transportation reported by riders who made the same trip using other means when not riding the surveyed bus route was “other MBTA service.” The percentage of riders choosing “other MBTA service” was highest on Route 434 (80%).

“Other” was the second-most-commonly selected alternative mode. The percentage of riders choosing “other” was highest on Route 465 (48%). The “other” responses that had write-in mode descriptions were most often “walk,” “taxi,” or “dropped off.” After “other,” “drive alone” was the third-most-commonly selected alternative mode on most routes. The percentage of riders choosing “drive alone” was highest on Route 449 (59%). “Carpool/vanpool” and “bicycle” were the next-most-frequently selected transportation alternatives. The percentage of riders choosing “carpool/vanpool” was highest on Route 439 (52%) and the percentage of riders choosing “bicycle” was highest on Route 436 (13%).

Origin Locations and Activities

The data presented in this chapter show where riders on Lynn Garage bus routes started their trips (by city, town, or neighborhood) and indicate what their activities were at each of those origin locations. This information is useful in defining the market area of each bus route and for understanding the types of trips made on each route. Additional information regarding the reasons for making trips is presented in Chapters 3 and 7.

A table presenting these data is provided for each bus route; the tables are at the end of the chapter. Each table shows both the origins and origin activities for passengers who rode some portion of the surveyed route. The data include not only the riders for whom the surveyed bus route was the point of entry into the entire transit system, but also riders who had transferred to that route from other bus routes or from rapid transit, commuter rail, or boat. (Details on the means of transportation between origins and surveyed bus trips are provided in Chapter 5.)

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

4.1 ORIGIN LOCATIONS

4.1.1 DESCRIPTION OF THE ORIGIN LOCATIONS SECTION OF THE TABLE

In each route's table, the left side summarizes the results of survey question 4b, which asked where riders began the entire one-way trips they were making when surveyed. The data show origin location by city, town, or neighborhood. In the systemwide passenger survey of which this bus survey is a part, the responses about origin locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips originating from outside of Massachusetts, the city and the state are given.

Origins reported by less than 0.5% of riders at a station were aggregated and placed in the "other" category; therefore, not all cities, towns, and

neighborhoods from which bus trips originated are represented individually in the table. Some survey responses did not contain enough information to determine an origin city, town, or neighborhood; these responses were aggregated into the “unspecified” category. The origin locations are listed in descending order, based on the number of riders.

4.1.2 OVERVIEW OF RESULTS

The size of the market for each bus route depends on a number of factors that influence a rider’s choice to use that route instead of another transportation mode. These include, in addition to the route’s proximity to the rider’s origin, its proximity to other transit services and the relative ease of access. Lynn Garage bus routes had varying market sizes. For example, if origins that were reported by less than 0.5% of the riders are included, the highest number of origin locations was 16, the number for people boarding Routes 426 and 441, while the lowest was 1, the number for Routes 121 and 424W. The origin locations with the highest percentages of riders were generally those that the specific bus route served.

4.2 ORIGIN ACTIVITIES

4.2.1 DESCRIPTION OF THE ORIGIN ACTIVITIES SECTION OF THE TABLE

In each route’s table, the right side of the table summarizes the results of survey question 4a, “Where were you before starting this entire one-way trip?” The survey form provided eight check-off choices: “at work,” “at school,” “at home,” “at a store,” “at a doctor or other personal business,” “at a work-related errand or meeting,” “at a restaurant, or social or recreational activity,” and “other” (with a space for write-ins). For each origin location, the table shows the percentages of riders who reported starting from each of these eight “activities.” The absolute number of riders starting from each activity can be determined by multiplying these percentages by the origin location totals on the left side of the table.

For each bus route, the number of survey responses from which the results in the table were expanded was greater for locations in the upper rows and smaller for those in the lower rows. Consequently, the higher the row, the more reliable the distribution of activities given for that origin location. For similar reasons, if one combines the data from groups of bus routes in the same general area, the resulting distribution of activities by origin location is more reliable than the results for individual routes.

4.2.2 OVERVIEW OF RESULTS

For the most part, the origin activity of people boarding each bus route was home: looking at the riders from the top 10 origin locations for these routes, home was the origin activity for 76%. This is partly a reflection of the hours when the survey was handed out (6:00 AM to 3:30 PM). Had the survey been handed out later, more people would likely have been starting from an activity

other than home. The survey result regarding the predominant origin activity is in accord with the result regarding the predominant trip purpose category, which was home-based work (see Chapters 3 and 7).

Most of the remainder of the origin activities of the surveyed riders were split between work, personal business, and store. Looking at the riders with the top 10 origin locations for all Lynn Garage bus routes, work was the origin activity for 6%, followed by personal business with 5% and store with 4%.

The percentages of riders whose origin activity was home were the highest on Routes 121, 424W, and 434 (all 100%) and were the lowest on Routes 459 (49%), 435 (50%), and 436 (51%). The percentages of riders with work, personal business, and store origin activities, respectively, were the highest for Routes 439 (40%), 117 (11%), and 459 (11%).

Access to the Bus

The data presented in this chapter describe aspects of riders' travel between the origins of their entire trips and the bus stops where they began their surveyed bus trips. These data consist of two primary types. One is the modes of transportation used by riders immediately before boarding the surveyed bus routes; these are referred to in this chapter as the access modes or trips. The other primary type of data in this chapter pertains only to the riders whose access trips were made via private transportation modes; it is the trip times for riders' entire trips from their trip origins to the bus stops where they began their bus trips.

For trips on the surveyed bus routes in which the access mode was a public transportation mode, additional details are given about the service used. The private transportation access mode to the transit system and the initial transit mode (which may or may not correspond to the access mode) used on the trip are both summarized for each route. In addition, other bus routes with the highest number of riders who transferred to the surveyed route are listed.

The tables (at the end of the chapter) present all of these data by route. The data for each bus route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

5.1 ACCESS MODE

5.1.1 DESCRIPTION OF TABLE

The access mode table for each bus route shows the distribution of trips among 13 transportation modes that riders used immediately before boarding that route. Seven of the modes are private: walk, drive/park, drop-off, taxi, shuttle/van, bicycle, and "other." Six are public: MBTA bus, other bus, rapid transit, commuter rail, boat, and "other." The access modes are grouped separately in the table by private and public transportation. As explained above, further details on the access trips made by public transportation are given in four subsequent tables.

In the access mode table, two columns present, respectively, the number and the percent of riders who reported using each mode to access the bus route for which the table was generated. Each column includes subtotals for the private and public modes. The number of expanded survey responses that provided no answer about the access mode appears in the table, but those responses are excluded from the percentage calculations.

5.1.2 OVERVIEW OF RESULTS

Walking was the most frequently reported access mode to every Lynn Garage bus route. The highest walk access rates were on Routes 121, 424W, and 439 (all 100%). Driving access trips were the second-largest private access mode. The highest driving access rates were on Routes 426 (10%), 449 (5%), and 428 (4%). Route 434 had the highest drop-off rate of the bus routes in Lynn Garage (42%); the next highest rate was on Route 465 (14%) followed by Route 436 (7%).

The public access modes most used by riders on Lynn Garage routes were MBTA bus and rapid transit. The highest bus access rates were on Routes 456 (13%), 448 (10%), and 119 (9%). The highest rapid transit access rates were on Routes 442 (28%), 117 (21%), and 441 (18%). The highest rate of commuter rail access trips was reported on Route 465 (7%).

5.2 TRIP TIME FOR ACCESS VIA PRIVATE TRANSPORTATION

5.2.1 DESCRIPTION OF TABLE

For each bus route, this table summarizes the reported access times, from trip origins to bus stops on that route, for riders who made their access trips entirely by private transportation. Trips in which private transportation was used to access an intermediate, public mode that was then used to reach the surveyed bus route are not included. The access times are summarized by seven ranges starting with 0 to 5 minutes and continuing at varying intervals up to an open-ended range of anything over 45 minutes.

The table shows the number of riders with reported times in each range for the walk, drive/park, and drop-off access modes individually and for all other private access modes combined. Within each of these four groups, it also shows the percent of access trips in each time range and the average access time for the mode.

5.2.2 OVERVIEW OF RESULTS

The lowest average walk access times were reported by riders on Routes 434 (3 minutes) and 424W and 448 (both 5 minutes). The highest walk access times were reported by riders on Routes 439 (16 minutes), 435 (10 minutes), and 451 (9 minutes). The highest reported drive/park access times were on Routes 428 (20 minutes), 449 (12 minutes), and 426 (10 minutes), and the highest reported

drop-off access times were on Routes 120 (30 minutes), 465 (20 minutes), and 442 (15 minutes).

Walk access times to all Lynn Garage bus routes combined averaged 7 minutes. Only 16% exceeded 10 minutes, or about one-half mile for an average person.

5.3 RIDERS WHO ACCESSED THE SURVEYED BUS ROUTE VIA PUBLIC TRANSPORTATION: FURTHER DATA

5.3.1 DESCRIPTION OF TABLES

For each bus route, four tables provide further details on the trips whose access mode was public transportation. The first of these tables lists the private modes by which riders initially accessed the transit system, while the second table lists the initial transit modes used on their trips. Two other tables indicate specific bus routes for riders who transferred from an MBTA or non-MBTA bus to the surveyed bus route; one table shows connecting routes, the other nonconnecting routes. Connecting routes are those from which riders transferred directly to the surveyed bus route; nonconnecting routes are those from which riders transferred to an intermediate public transportation mode before riding the surveyed bus route. Non-MBTA routes are identified as shown below:

TABLE 5-1
Designations Used for Private and
Other Non-MBTA Bus Services

Designation	Definition
BAT	Brockton Area Transit
BEX	Boston Express Bus
CJT	C&J bus
DAT	DATTCO bus
EZ	EZRide
LEX	LEXPRESS
LRTA	Lowell Regional Transit Authority
MART	Montachusett Regional Transit Authority
MIS	Mission Hill Link
MPA	Massport shuttle at Logan Airport
MWRTA	MetroWest Regional Transit Authority
PLB	Plymouth & Brockton Street Railway Co.
RIPTA	Rhode Island Public Transit Authority
SCH	School bus (generic)
UMB	UMass Boston shuttle

The bus routes listed in the transfer tables are those reported in response to question 5a as the first bus used, if applicable, before the surveyed bus route. In cases involving multiple transfers (bus transfers from nonconnecting routes), the intermediate link or links are not specified. Few riders make such multiple transfers.

For surveyed routes where there were too many bus transfer routes to list all individually on one page, the table combines those beyond a set number of rows as “other.” Because the bus routes are listed in descending order by number of riders, it is the less used ones that are combined.

Differences between the totals of the values shown in the transfer tables and those in the access mode tables are a result of rounding weighted records at different levels of aggregation.

5.3.2 OVERVIEW OF RESULTS

As with access to the surveyed bus routes, the most frequently reported mode for accessing the transit system (for those riders who transferred to the surveyed bus route from another transit mode) was walking. The highest walk rates for this part of the trips were on Routes 442 (32%), 441 (25%), and 117 (22%). The highest drive/park access and drop-off access rates were, respectively, 4% on Route 459 and 5% on Route 117.

The highest percentages of riders who transferred to the surveyed bus route from another transit mode and had begun their transit trip on another MBTA bus route were on Routes 456 (13%) and 448 and 117 (both 10%). The highest percentages of riders who transferred to the surveyed bus route from another transit mode and had begun their transit trip on rapid transit were on Routes 442 (26%), 117 (15%), and 441 (14%).

The most commonly listed connecting bus route from which bus riders on the surveyed routes transferred was Route 116, followed by Routes 429 and 111. The most commonly listed nonconnecting bus route from which bus riders on the surveyed routes transferred (with an intermediate transit link or links between the listed route and the surveyed route) was the Massport shuttle at Logan Airport, followed by Routes 7 and 11.

Egress from the Bus

The data presented in this chapter describe aspects of riders' travel between the bus stops where they ended their bus trips and the destinations of their entire trips. These data consist of two primary types. One is the modes of transportation used by riders immediately after alighting from the surveyed bus route; these are referred to in this chapter as the egress modes or trips. The other primary type of data in this chapter pertains only to the riders whose egress trips were made via private transportation modes; it is the trip times for riders' entire trips from the bus stops where they ended their bus trips to their trip destinations.

For trips on the surveyed bus route in which the egress mode was a public transportation mode, additional details are given about the service used. The private transportation egress mode from the transit system and the final transit mode (which may or may not correspond to the egress mode) used on the bus trip are both summarized for each route. In addition, other bus routes with the highest number of riders who transferred from the surveyed route are listed.

The tables (at the end of the chapter) present all of these data by route. The data for each bus route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

6.1 EGRESS MODE

6.1.1 DESCRIPTION OF TABLE

The egress mode table for each bus route shows the distribution of trips among 13 transportation modes that riders used immediately after alighting from that route. Seven of the modes are private: walk, drive/park, pick-up, taxi, shuttle/van, bicycle, and "other." Six are public: MBTA bus, other bus, rapid transit, commuter rail, boat, and "other." The egress modes are grouped separately in the table by private and public transportation. As explained above, further details on the egress trips made by public transportation are given in four subsequent tables.

In the egress mode table, two columns present, respectively, the number and the percent of riders who reported using each mode immediately after alighting from the bus route for which the table was generated. Each column includes subtotals for the private and public modes. The number of expanded survey responses that provided no answer about the egress mode appears in the table, but those responses are excluded from the percentage calculations.

It should be noted again that the data in these tables are only for riders on the bus system between 6:00 AM and 3:30 PM. Therefore, these results are dominated by passengers making their first trips of the day. After 3:30 PM (a period which, again, is not reflected in the survey results), the return segments of round-trips would be dominant. That is, riders alighting a given bus route after 3:30 would be predominantly the same riders who had boarded that morning, and on their PM trips they would alight from the bus route at mostly the same stops where they had boarded the bus route that morning.

6.1.2 OVERVIEW OF RESULTS

Walking was the most frequently reported private egress mode from every Lynn Garage bus route. The highest walk egress rates were on Routes 435 (91%) and 456 and 459 (both 90%). Pick-up and driving egress trips were the second- and third-largest private egress modes. Route 436 had the highest pick-up rate of the Lynn Garage bus routes (7%). Route 429 had the highest driving egress rate (12%). Several routes did not report any pick-up or driving egress trips.

The two public egress modes most used by riders on Lynn Garage routes were MBTA bus and rapid transit. The highest bus egress rates were on Routes 439 (24%), 451 (15%), and 119 (11%). The highest rapid transit egress rates were on Routes 424W (91%), 121 (84%), and 428 (54%).

6.2 TRIP TIME FOR EGRESS VIA PRIVATE TRANSPORTATION

6.2.1 DESCRIPTION OF TABLE

For each bus route, this table summarizes the reported egress times, from the surveyed bus route stops to the trip destinations, for riders who made their egress trips entirely by private transportation. Trips in which private transportation was used upon alighting from an intermediate, public mode that was used after the surveyed bus route are not included. The egress times are summarized by seven ranges starting with 0 to 5 minutes and continuing at varying intervals up to an open-ended range of anything over 45 minutes.

The table shows the number of riders with reported times in each range for the walk, drive/park, and pick-up egress modes individually and for all other private egress modes combined. Within each of these four groups, it also shows the percent of egress trips in each time range and the average egress time for the mode.

6.2.2 OVERVIEW OF RESULTS

The lowest average walk egress times were reported by riders on Routes 449, 121, and 439 (all 5 minutes). The highest walk egress times were reported by riders on Routes 424W (10 minutes) and 119 and 441 (both 9 minutes). The highest reported driving egress times were on Routes 426 (20 minutes) and 429 and 450 (both 10 minutes), and the highest reported pick-up egress times were on Routes 116 and 441 (both 20 minutes) and 436 (15 minutes).

Walking egress times from all Lynn Garage bus routes combined averaged 7 minutes. Slightly more than 20% exceeded 10 minutes, or about one-half mile for an average person.

6.3 RIDERS WHO EGRESSED FROM THE SURVEYED BUS ROUTE VIA PUBLIC TRANSPORTATION: FURTHER DATA

6.3.1 DESCRIPTION OF TABLES

For each bus route, four tables provide further details on the trips whose egress mode was public transportation. The first of these tables shows the usage of private modes by these riders after finally leaving the transit system, while the second table shows the final transit modes used on their trips. Two other tables show, respectively, the specific connecting and nonconnecting bus routes (either MBTA or non-MBTA) to which the riders transferred from the surveyed bus route. Connecting routes are those to which riders transferred directly from the surveyed bus route; nonconnecting routes are those to which riders transferred after riding the surveyed bus route and an intermediate public transportation mode. Non-MBTA routes are designated with the abbreviations given in Table 5-1.

The bus routes listed in the transfer tables are those reported in response to question 8b as the last bus used, if applicable, following the surveyed bus route. In cases involving multiple transfers (bus transfers to nonconnecting routes), the intermediate link or links are not specified. Few riders make such multiple transfers.

For surveyed routes where there were too many bus transfer routes to list all individually on one page, the table combines those beyond a set number of rows as “other.” Because the bus routes are listed in descending order by number of riders, it is the less used ones that are combined.

Differences between the totals of the values shown in the transfer tables and those in the egress mode tables are a result of rounding weighted records at different levels of aggregation.

6.3.2 OVERVIEW OF RESULTS

As with private egress from the surveyed bus routes, the most frequently reported mode used after finally leaving the entire transit system (for those riders who transferred from the surveyed bus route to another transit mode)

was walking. The highest walk rates for this part of the trips were on Routes 424W (91%), 121 (84%), and 439 (48%). The only route in the Lynn Garage with a drive rate was Route 439 with 12%, and the highest pick-up rate was 8% on Route 451.

The highest percentages of riders who transferred from the surveyed bus route to another transit mode and ended their transit trip on another MBTA bus route were on Routes 121 (47%), 451 (15%), and 119 (13%). The highest percentages of riders who transferred from the surveyed bus route to another transit mode and ended their transit trip on rapid transit were on Routes 424W (82%), 428 (46%), and 119 (38%).

The most commonly listed connecting bus route to which bus riders on the surveyed routes transferred was Route 116, followed by Routes 441 and 111. The most commonly listed nonconnecting bus route to which bus riders on the surveyed routes transferred (with an intermediate transit link or links between the surveyed route and the listed route) was the Silver Line Washington Street (Route 749), followed by Routes 10 and 73.

Destination Locations and Activities

The data presented in this chapter show where riders on Lynn Garage bus routes ended their trips (by city, town, or neighborhood) and indicate what their activities were at each of those destination locations. This information is useful in defining the market area of each bus route and for understanding the types of trips made on each route. Additional information regarding the reasons for making trips is presented in Chapters 3 and 4.

A table presenting these data is provided for each bus route; the tables are at the end of the chapter. Each table shows both the destinations and destination activities for passengers who rode some portion of the surveyed route. The data include not only the riders who left the entire transit system when they alighted from these routes, but also riders who continued on the system through transfers to other bus routes or to rapid transit, commuter rail, or boat. (Details on the means of transportation between surveyed bus routes and destinations are provided in Chapter 6.)

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

7.1 DESTINATION LOCATIONS

7.1.1 DESCRIPTION OF THE DESTINATION LOCATIONS SECTION OF THE TABLE

In each route's table, the left side summarizes the results of survey question 9b, which asked where riders ended the entire one-way trips they were making when surveyed. The data show destination location by city, town, or neighborhood. In the systemwide passenger survey of which this bus survey is a part, the responses about destination locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips ending outside of Massachusetts, the city and the state are given.

Destinations reported by less than 0.5% of riders at a station were aggregated and placed in the “other” category; therefore, not all cities, towns, and neighborhoods in which bus trips ended are represented individually in the table. Some survey responses did not contain enough information to determine a destination city, town, or neighborhood; these responses were aggregated into the “unspecified” category. The destination locations are listed in descending order, based on the number of riders.

7.1.2 OVERVIEW OF RESULTS

The size of the market for each bus route depends on a number of factors that influence a rider’s choice to use that route instead of another transportation mode. These include, in addition to the route’s proximity to the rider’s destination, its proximity to other transit services and the relative ease of access. Lynn Garage bus routes had varying market sizes. For example, if destinations that were reported by less than 0.5% of the riders are included, the highest number of destination locations was 29, the number for people boarding Route 455, while the lowest was 3, the number for Routes 451 and 456. The destination locations with the highest percentages of riders were generally those that the specific bus route served.

7.2 DESTINATION ACTIVITIES

7.2.1 DESCRIPTION OF THE DESTINATION ACTIVITIES SECTION OF THE TABLE

In each route’s table, the right side of the table summarizes the results of survey question 9a, “Where will/did this one-way trip end?” The survey form provided eight check-off choices: “at work,” “at school,” “at home,” “at a store,” “at a doctor or other personal business,” “at a work-related errand or meeting,” “at a restaurant, or social or recreational activity,” and “other” (with a space for write-ins). For each destination location (city, town, or neighborhood), the table shows the percentages of riders who reported ending at each of these eight “activities.” The absolute number of riders ending at each activity can be determined by multiplying these percentages by the destination location totals on the left side of the table.

For each bus route, the number of survey responses from which the results in the table were expanded was greater for locations in the upper rows and smaller for those in the lower rows. Consequently, the higher the row, the more reliable the distribution of activities given for that destination location. For similar reasons, if one combines the data from groups of bus routes in the same general area, the resulting distribution of activities by destination location is more reliable than the results for individual routes.

7.2.2 OVERVIEW OF RESULTS

For the most part, the largest destination activity of people boarding each bus route was work: looking at the riders from the top 10 destination locations for

these routes, work was the destination activity for 37%. This is partly a reflection of the hours when the survey was handed out (6:00 AM to 3:30 PM). Had the survey been handed out later, more people would likely have been destined for an activity other than work. The survey result regarding the predominant destination activity is in accord with the result regarding the predominant trip purpose category, which was home-based work (see Chapters 3 and 4).

Most of the remainder of the destination activities of the surveyed riders were split between home, store, other activities, and school. Looking at the riders with the top 10 destination locations for all Lynn Garage bus routes, home was the destination activity for 19%, followed by store, other, and school each with 8%.

The percentages of riders whose destination activity was work were the highest on Routes 449 (95%) and 448 and 424W (both 82%) and were the lowest on Routes 429 (21%), 435 (22%), and 436 (27%). The percentages of riders with home, store, other, and school destination activities, respectively, were the highest for Routes 439 (40%), 435 (18%), 121 (16%), and 455 (23%).

Origin-Destination Cross-tabulation

The data in Chapter 4 of this report show, for riders who made their bus trips on Lynn Garage bus routes, the origin locations of their entire trips by city, town, or neighborhood. The data in Chapter 7 show the final destination locations, by city, town, or neighborhood, of these riders.

In this chapter, the type of table presented provides, for the passengers who boarded the bus on each surveyed route, a cross-tabulation between the origins of the passengers' entire trips and the final destinations of these trips, regardless of where they entered or exited the transit system.

The tables (at the end of the chapter) present all of these data by route. The data for each bus route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

8.1 DESCRIPTION OF TABLE

The origin-destination cross-tabulation table for each entry station is based on the responses to survey questions 4b and 9b, which asked riders to state the location of the starting and ending points of the trips they were making when they received the survey forms. Respondents were asked to provide the following information about these locations: address, or nearest intersection or landmark; city, town, or neighborhood; state; and zip code. However, many of the responses were less detailed than this. In such cases, missing details were inferred to the extent possible from other information provided, such as the transit boarding and alighting points, the modes of access and egress, and the access and egress times.

In the systemwide passenger survey of which this bus survey is a part, the responses about origin locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips originating from outside of Massachusetts, the city and the state are given.

The neighborhood names and boundaries used in the survey databases conform

to definitions that have been used by CTPS in previous surveys, and they do not all match the names used by survey respondents. For example, locations reported as “Chinatown” in survey responses were included in “Boston: Park Square” in the databases.

The table for each entry station shows a maximum of 18 origins (in rows) and 10 destinations (in columns). For each bus route, the origins included are those with the largest total numbers of reported trip beginnings, regardless of reported destination. The rows of origins are arranged in descending order of size. Any origins below the top 18 are combined as “Other” in a nineteenth row.

Similarly, the destinations included in each table are those with the largest total numbers of trip ends, regardless of reported origin. The columns of destinations are arranged in descending order of size. Any origins below the top 10 are combined as “Other” in an eleventh column.

For each surveyed route, the destination most frequently reported by all riders combined was often, though not always, the same as the one most frequently reported by the riders who were coming from the most frequently reported origin. Therefore, the most common origin-destination pair was often, though not always, the one in the first column of the first row in the table.

The entries in the “Other” row and “Other” column show, both in absolute numbers and in percentages, the importance, respectively, of origins not shown for each destination listed and of destinations not shown for each origin listed. If information on specific “other” origins or destinations is desired, custom reports can be generated.

8.2 OVERVIEW OF RESULTS

The most common origin-destination pair for all Lynn Garage bus routes as a whole was East Boston to East Boston, which was reported by 9% of all riders. This combination was one of the top five origin-destination pairs for three of the 24 Lynn Garage routes: Routes 120 (57% of the route’s riders), 121 (16%), and 114 (15%). The highest percentages of riders, by route, in one origin-destination pair were on Routes 120 (57%, East Boston to East Boston), 424W (46%, Lynn to the Financial/Retail District in Boston), and 451 (45%, Salem to Beverly).

Socioeconomic Characteristics

This chapter presents data on the age, gender, income, and ethnicity of the riders on Lynn Garage bus routes. Tables (at the end of the chapter) present these data by route. For each route, three tables presenting, respectively, the age, gender, and income data are grouped on one page. Ethnicity data for that route's riders are shown in two tables on the following page. The data for each bus route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

9.1 AGE OF RIDERS

9.1.1 DESCRIPTION OF TABLE

The first table for each bus route summarizes the results from survey question 16, "What is your age?" It shows the number of riders and the percent of riders relative to the station total (excluding "no answer") in each of six age groups: 18 or under, 19 to 24, 25 to 34, 35 to 44, 45 to 64, and 65 or over. It also gives the cumulative percentages that result as one adds each age group to the ones preceding it in the table.

9.1.2 OVERVIEW OF RESULTS

Across all bus routes, most respondents were between the ages of 25 and 64. On one bus route, however, less than 60% of the responding population belonged to this age group: Route 436 (54%). Members of the workforce are most likely to be somewhere in this age range, and, indeed, 59% of the riders on all bus routes reported work or work-related trip purposes (see Chapter 3 for a full discussion of trip purposes).

Overall, the 45-to-64 age bracket had the highest share of riders (36%); its highest shares by route were on Routes 439 (76%), 448 (72%), and 449 (69%). The 25-to-34 age bracket had the second-highest share of riders (20%); its highest shares by route were on Routes 456 (39%) and 116 and 114 (both 32%).

The percentages of responses in the 19-to-24 category varied widely among bus routes. The highest percentages were observed on Routes 455 (24%), 459 (23%), and 451 (22%). Several routes were observed with 0% of riders in this age category.

On the Lynn Garage routes overall, 3% of survey respondents were age 18 or under. The highest percentages were observed on Routes 121 (11%), 436 (9%), and 455 (8%). At the other end of the spectrum, 10% of the respondents on all surveyed routes were age 65 or older. The highest percentages were observed on Routes 465 (26%), 120 (23%), and 119 (18%).

9.2 GENDER OF RIDERS

9.2.1 DESCRIPTION OF TABLE

The gender table for each bus route summarizes the responses to survey question 20, “What is your gender? (For example: Male, Female),” with space for a write-in answer. The open-ended format of the question allowed survey respondents to self-identify as transgender. The table displays, for each gender, the number of riders and the percentage of the total number of riders who answered the question.

9.2.2 OVERVIEW OF RESULTS

On every Lynn Garage bus route except Routes 117 and 439, female riders outnumbered male riders. The highest percentage of male respondents was 64%, on Route 439. The highest percentage of female respondents was 76%, on Route 459.

Two surveys were returned by transgender riders.

9.3 ANNUAL HOUSEHOLD INCOME

9.3.1 DESCRIPTION OF TABLE

Each station’s table on annual household income summarizes the responses to survey question 19, “What is your annual combined household income?” The survey form provided eight income-range choices: “under \$20,000,” “\$20,000–\$29,999,” “\$30,000–\$39,999,” “\$40,000–\$49,999,” “\$50,000–\$59,999,” “\$60,000–\$74,999,” “\$75,000–\$99,999,” and “\$100,000 or more.” The table shows the number and percent of riders who checked each income range, as well as giving the cumulative percentages that result as one adds each income group to the ones preceding it in the table. Riders who did not answer this question are not reflected in the percentages. Below this table is a line that reports the average household size for riders on the bus route.

9.3.2 OVERVIEW OF RESULTS

The results regarding household income varied considerably among bus routes. On the Lynn Garage routes overall, the highest percentage of survey

respondents were in the under-\$20,000 range (29%). The routes with the highest percentages in this range were Routes 429 (56%), 436 (54%), and 456 (51%); several routes were observed with 0% of riders in this income category.

The average household size varied across the bus routes from as high as 3.7 on Route 424W to as low as 1.6 on Route 439.

9.4 ETHNICITY OF RIDERS

9.4.1 DESCRIPTION OF TABLES

For each bus route, ethnicity is reported using two tables. The first summarizes the results from survey question 21a, “How do you self-identify by race?” Six check-off choices were provided: “American Indian or Alaska native,” “black or African-American,” “native Hawaiian or other Pacific islander,” “Asian,” “white,” and “other” with space for write-ins. These categories were those used in the U.S. census. Respondents were instructed to check as many as applied. The table shows the number and percent of responses for each race category. Because riders were allowed to check more than one box, percentages generally add up to more than 100%.

The second table shows the results from survey question 21b, “Are you Hispanic/Latino?”, which provided the check-off options “yes” and “no.” The table shows the number and percent of “yes” and “no” responses. The data reported in this table are independent of those in the preceding table. Riders who self-identified as Hispanic or Latino in question 21b could have checked any of the races listed in question 21a.

9.4.2 OVERVIEW OF RESULTS

The route with the highest percentage of white riders was Route 121 (100%). The route with the highest percentage of nonwhite riders was Route 455, where 17% of the riders self-identified as black or African-American and 19% as “other.” Most of the riders who checked “other” also checked that they were Hispanic/Latino. As in the table, each of the percentages given in this discussion for a race includes any respondents who checked not only that race but one or more others as well.

The bus routes with the highest percentages of riders who answered “yes” as to whether they were Hispanic/Latino were Routes 116 (40%), 424W (33%), and 121 (31%). The routes with the lowest percentages of Hispanic/Latino riders were Routes 428, 439, and 448 (all with 0%).

Usage Rates and Fare Types

The data presented in this chapter show how frequently the riders of each Lynn Garage bus route used the route. They also show how the riders paid their fares and how frequently the users of each fare type rode the route.

The tables (at the end of the chapter) present data by bus route. For each route, two tables are grouped on one page, and a third table appears on a second page. The first table shows the number of days per week riders used the surveyed bus route; the second shows their weekend use patterns. The third table shows how many riders used each fare type and how often the users of each fare type rode the surveyed bus route. The data for each bus route are based on the survey responses from passengers who rode some portion of that route.

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

10.1 NUMBER OF DAYS USED PER WEEK

10.1.2 DESCRIPTION OF TABLE

The first table for each bus route summarizes the results of survey question 11, which asked how many days a week riders used the route. Nine check-off boxes were provided on the survey form: one for each possible number of days per week, plus “less than 1 day” and “I’m only visiting Boston.” For each usage level, the table shows the number and percent of riders; it also gives the cumulative percentages that result as one adds each category of user to the ones preceding it in the table.

10.1.2 OVERVIEW OF RESULTS

The most common reported usage frequency across all Lynn Garage bus routes except Route 436 was five days per week. However, many riders reporting occasional or regular weekend usage also rode the bus route throughout the week, as indicated by their reported usage rates of six or seven days. Therefore, in the following comparisons of reported usage by bus route, the category of five or more days is used instead of five days.

For the Lynn Garage overall, 72% of the riders reported usage rates of five or more days per week. The highest percentages of riders on the surveyed routes reporting five-day-or-more usage were on Routes 424W and 434 (both 100%) and 428 (81%). The highest percentages of six-or-seven-day usage were on Routes 119 (37%) and 436 and 117 (both 35%). The highest percentages of less-than-one-day usage were on Routes 429 (13%) and 442 and 441 (both 7%).

10.2 WEEKEND USAGE

10.2.1 DESCRIPTION OF TABLE

The weekend usage table for each bus route summarizes the results of survey question 12, which asked how frequently riders used the surveyed bus route on Saturdays and Sundays. For each weekend day, riders could check one of three frequency-of-use categories: regularly, occasionally, or not at all.

In the table, Sunday usage categories are displayed across the top of the table, and Saturday down the left side. The table cells show cross-tabulated data for Saturdays and Sundays. For example, the cells in the first data row show the numbers and percentages of Sunday riders, by usage category, who used the bus route regularly on Saturday. Likewise, the cells in the first data column show the numbers and percentages of Saturday riders, by usage category, who used the bus route regularly on Sunday.

The far-right column shows the total numbers and percentages of Saturday riders by usage category, and the bottom row shows the same for Sunday. These totals reflect only riders who described their usage for both Saturday and Sunday.

10.2.2 OVERVIEW OF RESULTS

For the Lynn Garage overall, the most frequently reported combinations of Saturday and Sunday usage were occasional use on both days (35%), followed by no use on both days (29%), and regular use on both days (19%).

The bus routes with the highest reported regular usage on both Saturday and Sunday were Routes 119 (36%) and 442 and 435 (both 23%). Route 119 also had the highest reported percentages of regular or occasional usage on Saturday and Sunday individually (89% and 77%, respectively).

10.3 FARE TYPES AND PASS USAGE

10.3.1 DESCRIPTION OF TABLE

The third table for each bus route, on a separate page, presents three data points for each fare type: the number of riders using the fare type (data column one), the percentage of riders using the fare type (column two), and the number of days per week that the riders using each fare type rode the surveyed bus route (column three). The first two data columns are based on the results of survey

question 7: “What type of fare did you pay for this bus trip?” Ten check-off choices were provided, including “other” with space for write-ins. Riders using commuter rail monthly passes could also write in the zone number. The data in the third column are based on the assumption that each rider used the fare payment type reported in question 7 on the same number of days per week that the rider reported using the surveyed bus route in question 11.

10.3.2 OVERVIEW OF RESULTS

Mix of Fare Types

For the Lynn Garage overall, the most common method of fare payment was some form of monthly pass, reported by 46% of all riders. Pay-per-ride using a CharlieCard was second, at 30% overall. Monthly pass use was most common on each surveyed bus route except Routes 429, 435, 436, 439, 450, 451, 456, and 459.

The type of monthly pass most commonly used on each route varied by type of service. On express bus routes, the Inner Express Bus Pass was the most commonly used. On most local bus routes, the LinkPass was the most commonly used pass, followed by the Local Bus Pass. After the LinkPass, the Local Bus Pass, and the Inner Express Bus Pass, the next-most-common monthly pass category, reported by 3% of the riders on all surveyed bus routes, were Senior and Disability monthly passes. Senior monthly passes are used by riders over age 65. Zone passes were reported by 2% of riders. These passes are used by passengers who also use MBTA commuter rail or Inner Harbor ferry services.

After monthly passes and pay-per-ride using CharlieCards, the two most common fare types overall were reduced-fare pay-per-ride (including Student, Senior, and Disability) and 7-Day LinkPasses. The percentages of riders using either of these types varied considerably among bus routes. Reduced-fare pay-per-ride use ranged from 0% on several bus routes to 17% on Route 435. The use of 7-Day LinkPass ranged from 0% on several bus routes to 15% on Route 117.

Usage Rates by Fare Type

As explained above, the third column of the Fare Types and Pass Usage table shows the average number of days per week that riders reporting use of each fare type used the surveyed bus route.

Pay-per-Ride CharlieCard

The CharlieCard, a plastic card containing a radio-frequency identification (RFID) chip, was launched in 2006. The user can simply tap the pass on a reader to pay a fare. At the time of the survey, riders who used the CharlieCard to pay-per-ride paid 17% less per ride than those who used the paper CharlieTicket (\$1.25 versus \$1.50). Using the CharlieCard also took less time than paying using a CharlieTicket. The average usage rate by bus route of the

CharlieCard to pay-per-ride ranged from 3.0 days per week on Route 121 to 6.0 days per week on Route 428; the overall Lynn Garage average was 4.6 days.

Pay-per-Ride CharlieTicket

The CharlieTicket, a paper ticket with a magnetic strip, has been in use since early 2005. The average usage rate by bus route of the CharlieTicket to pay-per-ride ranged from 3.0 days per week on Route 435 to 6.0 days per week on Routes 120, 121, and 451; the overall Lynn Garage average was 5.0 days.

Monthly Pass

Monthly passes, which allow unlimited use, typically show higher average usage rates than pay-per-ride options, because the most frequent riders have the most incentive to purchase such passes. The average usage rate by bus route for all monthly pass forms combined ranged from 4.0 days per week on Route 451 to 6.0 days per week on Route 456; the overall Lynn Garage average was 5.0 days.

Full Cash Fare On-Board

In addition to using the CharlieCard or CharlieTicket on a pay-per-ride basis, passengers may also use cash to pay their fare on-board the bus. The adult cash fare is set at the same level as the CharlieTicket pay-per-ride fare. The average usage rate by bus route of full cash fare on-board to pay-per-ride ranged from 0.5 days per week on Route 442 to 5.9 days per week on Route 450; the overall Lynn Garage average was 3.5 days.

Reduced Fare

This category includes pay-per-ride reduced fares for students from age 12 through high school, for seniors (age 65 and over), and for passengers with disabilities. Monthly passes for riders eligible for reduced fares are included in the data for monthly passes. The average usage rate by bus route of pay-per-ride reduced fare ranged from 2.4 days per week on Route 455 to 7.0 days per week on Route 451; the overall Lynn Garage average was 4.2 days.

Child Under Age 12 Free Fare

Children under age 12 seldom fill out passenger surveys, so little information is available about riders in that group. No riders in the entire Lynn Garage reported “Child Under Age 12 Free Fare.”

Blind Access Card

Only one survey was returned by a Lynn Garage bus rider using a Blind Access Card as the fare type. This respondent rode an average of 3.0 days per week.

1-Day LinkPass

Only one survey was returned by a Lynn Garage bus rider using a 1-Day LinkPass as the fare type. This respondent rode an average of 5.0 days per week.

7-Day LinkPass

The average usage rate by bus route for the 7-Day LinkPass ranged from 3.8 days per week on Route 120 to 7.0 days per week on Route 119; the overall Lynn Garage average was 5.2 days.

Other

On the bus system overall, most riders who checked the box for “other” fare type and also wrote in which type were authorized free riders, including MBTA employees. For the Lynn Garage, only four returned surveys had the “other” fare type checked. These respondents rode an average of 4.2 days per week.

Vehicle Availability

The four types of data presented in this chapter describe the potential for riders on Lynn Garage bus routes to have used personal vehicles (autos, trucks, or motorcycles) as alternatives to the trips they were making when surveyed. More specifically, the survey asked whether or not riders were licensed to drive, how many vehicles were owned by the riders' households, and whether these vehicles were available for use by the riders. Per capita vehicle ownership was calculated from the answers to the household vehicle ownership question and the household size question (for the latter, see Chapter 9).

Tables (at the end of the chapter) present these data by bus route. For each route, four tables presenting the four respective types of data are grouped on a single page. The data for each route are based on the survey responses from passengers who rode some portion of that route. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

11.1 LICENSED DRIVERS

11.1.1 DESCRIPTION OF TABLE

Each bus route's table on licensed drivers shows both the numbers and percentages of the route's riders who are licensed and not licensed to drive a vehicle. Also shown is the number of survey respondents who did not answer the question; however, the percentages in the table exclude riders who did not respond.

11.1.2 OVERVIEW OF RESULTS

For all Lynn Garage bus routes combined, 56% of survey respondents were licensed to drive. The lowest percentages of riders with licenses were on Routes 435 and 436 (both 34%) and 429 (36%). The highest percentages were on Routes 448 (92%), 424W (91%), and 449 (90%).

11.2 USABLE VEHICLES PER HOUSEHOLD

11.2.1 DESCRIPTION OF TABLE

Each bus route's table showing usable vehicles per household summarizes the results of survey question 15a, which asked how many usable vehicles (including autos, trucks, and motorcycles) riders' households had. Respondents could check one of four boxes that corresponded to zero, one, two, and three or more vehicles. The table shows the number and percentage of riders who checked each choice. Riders who did not answer this question are not counted in the percentages.

11.2.2 OVERVIEW OF RESULTS

The number of vehicles owned per household generally correlates with each bus route's respective rate of licensed drivers. The highest percentages of riders with two or more household vehicles were on Routes 449 (54%), 428 (46%), and 426 (43%). The bus routes with the highest percentages of riders with no household vehicle were Routes 451 (71%) and 459 and 120 (both 63%).

11.3 RIDERS WITH A HOUSEHOLD VEHICLE AVAILABLE FOR THE TRIP

11.3.1 DESCRIPTION OF TABLE

Each bus route's table on vehicle availability for the surveyed trip summarizes the results for question 15b, which asked if the rider could have used a household vehicle instead of riding the surveyed bus route on the day of the survey. The numbers and percentages of riders who responded "yes" and "no" to the question are shown in the table. Riders who did not answer the question were not counted in the percentages.

11.3.2 OVERVIEW OF RESULTS

The bus routes with the highest percentages of riders with an available vehicle were Routes 439 (76%), 449 (67%), and 448 (63%). These riders most likely used the surveyed bus route by choice, since they did not use their available vehicles instead. The bus routes with the lowest percentages of vehicle availability were Routes 451 (8%), 120 (10%), and 429 (12%).

11.4 VEHICLES OWNED PER CAPITA

11.4.1 DESCRIPTION OF TABLE

For each bus route's table on per capita vehicle ownership in the survey respondents' households, that rate was calculated by dividing the number of usable household vehicles reported in question 15a by the household size reported in question 18. The table presents six ownership ranges: no vehicles,

0.01 to 0.49 vehicles, 0.50 to 0.99 vehicles, 1.00 to 1.49 vehicles, 1.5 to 1.99 vehicles, and 2 or more vehicles. For each range, the table shows the number and percent of riders; it also gives the cumulative percentages that result as one adds each category of user to the ones preceding it in the table. Riders who did not answer both question 15a and question 18a were not included in the calculations.

11.4.2 OVERVIEW OF RESULTS

The highest percentages of riders from households with 1.0 or more vehicles per capita were Routes 439 (86%), 449 (47%), and 448 (38%). The highest percentages of riders from households with no vehicles were Routes 451 (75%), 459 (64%), and 120 (61%).

Although households with no vehicles would also have no vehicles per capita, the latter value in this table differs slightly from the value for the former (in a preceding table), because some riders who reported that their household had no vehicles did not answer the household size question (and therefore are not included in the present table, as has been explained).

Service Quality

The data presented in this chapter summarize the ratings that riders on each Lynn Garage bus route gave to MBTA service quality in terms of 12 measures that were listed in question 24 on the survey form. The question asked for the riders' feelings "about MBTA bus service," as opposed to service on the surveyed bus route in particular. This question differed from the others on the form in that it dealt with subjective opinions rather than objective characteristics of riders and their trips.

There may be some bias in the results, for two reasons. Riders with strong positive or negative opinions of service may have been more inclined to complete question 24 than those without strong opinions. Also, the survey did not capture opinions of potential riders who do not use the surveyed bus route because of strong negative perceptions of one or more service attributes.

After rating the 12 listed service attributes, respondents were asked to indicate which three were most important to them. Based on the weighted number of survey forms on which each attribute was marked as one of the most important, one of the following importance levels was assigned to each attribute: very low (first quartile), low (second quartile), moderate (third quartile), and high (fourth quartile). The results vary from route to route; significant variations are noted in the text. It should be noted that these are *relative* importance levels. Each rider indicated only which three attributes were most important. It does not necessarily follow that the other attributes were unimportant to that rider—they were simply not as important as the top three.

The 12 attributes and the ratings they received are discussed below in the order in which they appeared on the survey form. The importance level of each attribute is given in its section heading. Tables (at the end of the chapter) present the service quality data by bus route. For each route, one table presents both the ratings and data on importance rankings for each of the service quality measures. The data for each route are based on the survey responses from riders who rode some portion of that route.

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Lynn Garage as a whole. It includes tables and discussion.

12.1 DESCRIPTION OF TABLE

Respondents ranked the quality of 12 attributes of MBTA bus service on a scale from poor (1) to excellent (5) and also indicated which three of the 12 attributes were most important to them. The table for each surveyed bus route gives, for each attribute, the percent of respondents on that route who checked each of the ratings (excluding those who gave no ratings), and it also gives the average rating. The final column in the table shows the number of riders who checked each attribute as one of the three most important.

12.2 OVERVIEW OF RESULTS

Reliability (On-Time Performance) *Relative Importance: High*

The bus routes on which riders gave the highest average ratings for “reliability (on-time performance)” to MBTA bus service were Routes 424W (4.3), 439 (4.0), and 435 (3.9). The lowest average ratings were given by the riders of Routes 459 (2.5) and 116 and 117 (both 2.8). The average rating for reliability across all Lynn Garage bus routes was 3.1.

Reliability ranked as the most important service quality among the riders of each bus route except Route 429.

Safety and Security *Relative Importance: High*

The bus routes on which riders gave the highest average ratings for “safety and security” to MBTA bus service were Routes 424W (4.4) and 435 and 436 (both 4.3). The lowest average ratings were given by the riders of Routes 455 (3.4) and 459 and 114 (both 3.6). The average rating for safety/security across all Lynn Garage bus routes was 3.8.

Safety/security ranked as the third-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as tied for the most important, based on the responses of riders by route (Route 451).

Cleanliness/Condition of Vehicles *Relative Importance: Low*

The bus routes on which riders gave the highest average ratings for “cleanliness/condition of vehicles” to MBTA bus service were Routes 424W and 465 (both 4.0) and 435 (3.9). The lowest average ratings were given by the riders of Routes 455, 434, and 426 (all 3.0). The average rating for cleanliness/condition of vehicles across all Lynn Garage bus routes was 3.3.

Cleanliness/condition of vehicles ranked as the seventh-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the second-most-important, based on the responses of riders by route (Routes 434 and 465).

Courtesy of Drivers *Relative Importance: Medium*

The bus routes on which riders gave the highest average ratings for “courtesy of drivers” to MBTA bus service were Routes 439 (4.9), 424W (4.4), and 435 (4.3). The lowest average ratings were given by the riders of Routes 114 (2.8), 455 (3.1), and 117 (3.2). The average rating for courtesy across all Lynn Garage bus routes was 3.5.

Courtesy ranked as the fifth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as tied for the most important, based on the responses of riders by route (Routes 429, 439, and 456).

Announcement of Stops *Relative Importance: Very Low*

The bus routes on which riders gave the highest average ratings for “announcement of stops” to MBTA bus service were Routes 439 (4.9) and 451 and 435 (both 4.5). The lowest average ratings were given by the riders of Routes 114 (3.6) and 455 and 459 (both 3.7). The average rating for stop announcements across all Lynn Garage bus routes was 4.0.

Stop announcements ranked as the tenth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the fourth-most-important, based on the responses of riders by route (Routes 114, 439, and 456).

Availability of Seating on Buses *Relative Importance: Medium*

The bus routes on which riders gave the highest average ratings for “availability of seating on buses” to MBTA bus service were Routes 451 (4.5), 439 (4.4), and 424W (4.3). The lowest average ratings were given by the riders of Routes 434 (2.8), 114 (2.9), and 117 (3.0). The average rating for seating availability across all Lynn Garage bus routes was 3.5.

Seating availability on buses ranked as the sixth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the third-most-important, based on the responses of riders by route (Routes 435 and 448).

Frequency of Service *Relative Importance: High*

The bus routes on which riders gave the highest average ratings for “frequency of service” to MBTA bus service were Routes 436 (4.0) and 435 and 426 (both 3.5). The lowest average ratings were given by the riders of Routes 434 (2.1), 465 (2.6), and 117 (2.7). The average rating for frequency of service across all Lynn Garage bus routes was 3.1.

Frequency ranked as the second-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as tied for the most important, based on the responses of riders by route (Routes 114, 439, and 451).

Travel Time/Speed *Relative Importance: Medium*

The bus routes on which riders gave the highest average ratings for “travel time/speed” to MBTA bus service were Routes 439 and 436 (both 4.1) and 435 (4.0). The lowest average ratings were given by the riders of Routes 449 (3.0) and 114 and 455 (both 3.1). The average rating for travel time/speed across all Lynn Garage bus routes was 3.4.

Travel time/speed ranked as the fourth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the second-most-important, based on the responses of riders by route (Route 424W).

Parking Availability *Relative Importance: Very Low*

The bus routes on which riders gave the highest average ratings for “parking availability” to MBTA bus service were Routes 424W (4.3), 436 (4.1), and 435 (3.9). The lowest average ratings were given by the riders of Routes 434 (2.3), 448 (2.4), and 114 (2.7). The average rating for parking availability across all Lynn Garage bus routes was 3.4.

Parking availability ranked as the twelfth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the fourth-most-important, based on the responses of riders by route (Routes 439 and 456).

Stop Amenities *Relative Importance: Low*

The bus routes on which riders gave the highest average ratings for “stop amenities” to MBTA bus service were Routes 436 (3.6), 435 (3.4), and 121 (3.2). The lowest average ratings were given by the riders of Routes 434 and 449 (both 1.9) and 448 (2.1). The average rating for stop amenities across all Lynn Garage bus routes was 2.8.

Stop amenities ranked as the eighth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the fourth-most-important, based on the responses of riders by route (Routes 424W, 439, 456 and 465).

It is worth noting that, as “amenities” is subject to interpretation, there were presumably some variations among riders’ ideas of what they were rating.

Fare Collection System *Relative Importance: Low*

The bus routes on which riders gave the highest average ratings for “fare collection system” to MBTA bus service were Routes 121 (4.6), 436 (4.1), and 435 (4.0). The lowest average ratings were given by the riders of Routes 456 (2.8), 455 (3.0), and 114 (3.1). The average rating for the fare collection system across all Lynn Garage bus routes was 3.5.

The fare collection system ranked as the ninth-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as

high as the fourth-most-important, based on the responses of riders by route (Routes 439, 456, and 465).

Signage *Relative Importance: Very Low*

The bus routes on which riders gave the highest average ratings for “signage on vehicles” to MBTA bus service were Routes 436 (4.3), 121 (4.2), and 435 (4.1). The lowest average ratings were given by the riders of Routes 459 (3.4) and 455 and 114 (both 3.5). The average rating for signage across all Lynn Garage bus routes was 3.7.

Signage ranked as the eleventh-most-important service quality, based on the overall response of all riders on Lynn Garage bus routes, and as high as the fourth-most-important, based on the responses of riders by route (Routes 436, 439, and 456).

APPENDIX A

Survey Distribution, Response, Processing, and Expansion

A.1 SURVEY DISTRIBUTION STRATEGIES

A.1.1 TIME SPAN OF SURVEY DISTRIBUTION

The first step in designing the distribution strategy was determining the time span of the survey distribution. Except for the commuter rail system, the time spans used in the 2008–09 surveys were the same as those used in the most recent previous surveys on each mode. In the 1994 rail rapid transit, 1995 bus, and 2000 water transportation surveys, forms were distributed between approximately 6:00 AM and 3:00 or 3:30 PM to passengers traveling in either direction. This strategy was based on experience from a systemwide survey conducted in 1978, when forms were distributed over the entire service day. Response rates to that survey showed sharp declines after 3:30 PM. In devising the distribution plan for the 1994 survey and subsequent surveys, CTPS examined patterns in MBTA ridership counts and concluded that close to 85% of the passengers who used most services on a given day traveled in at least one direction before 3:30 PM. Consequently, with thorough coverage before 3:30, the majority of riders boarding after 3:30 would already have had an opportunity to receive survey forms earlier in the day.

The strategy for the 1993 commuter survey had been developed earlier, and consisted of distributing surveys on all inbound trains scheduled to arrive in Boston on each line between approximately 6:00 AM and midnight, but no distribution on outbound trains. For consistency, the 1998 Old Colony commuter rail surveys used the same distribution strategy as the 1993 surveys. However, in planning the 2008–09 commuter rail surveys, CTPS concluded that distribution on trains in both directions between about 6:00 AM and 3:30 PM, similar to the strategy to be used on other modes, would be more efficient and would produce satisfactory results.

The strategy used on all modes in 2008–09 did not reach riders whose entire trips were made after 3:30 PM. Some common purposes for trips beginning after that time would include travel to night-shift jobs, to evening classes, to

theaters, and to sporting events. The last two trip purposes are nonrepetitive, at least on a daily basis. Experience has shown that people that do not use the system frequently are less likely than regular riders to accept survey forms because infrequent riders often assume that the survey would not apply to them.

A.1.2 SURVEY DISTRIBUTION METHODS BY MODE

After determining the span of hours in which surveys were to be distributed, the next step was to determine the methods for survey distribution on each mode. Passengers entering each heavy rail rapid transit station and each Green Line Central Subway station have to pass through fare gates at limited numbers of locations. At such stations, survey distributors were positioned either just inside or just outside the faregates, and instructed to offer survey forms to as many entering passengers as possible. At most stations, only one distributor was assigned to each fare collection area at any given time, but at stations where heavy passenger volumes were anticipated, two distributors were assigned at some times.

Passengers boarding Green Line trains at all surface stops on the B, C, D, and E Branches, except Riverside on the D Branch, either pay fares or display passes when boarding. In 1994, survey forms were distributed to passengers waiting on platforms on the D Branch, but were distributed by surveyors on-board trains on the other lines. However, because of crowding on peak-period trains, it was increasingly difficult to distribute surveys to passengers boarding at stops closer to the subway portals. Therefore, at all stops on all four branches, surveys in 2008–09 were distributed to passengers waiting on the platforms. Depending on the platform configuration and expected ridership volumes, either one distributor offered surveys to both inbound and outbound riders, or separate distributors were assigned to the inbound and outbound platforms.

The Mattapan High-Speed Trolley Line also has on-board fare collection, but the expected average trip loads were low enough that the survey distribution was done, at all times of the day, by one distributor riding on-board each inbound and outbound trip from one end of the route to the other, between approximately 6:00 AM and 3:30 PM. All of the survey distribution on the bus system was done by distributors on-board buses. The distribution plan called for coverage of every route in the system except for the Silver Line routes (which had been surveyed in 2005 and 2006), and routes that operated only outside of the survey hours. For efficiency, the set of trips to be covered in each distributor's assignment was to be based on trip sequences in bus operator assignments (runs). The amount of the project budget allocated for bus surveys allowed for only about half of all operator runs during the survey hours to be covered. However, by selecting runs that included above-average numbers of trips, the percentage of trips covered was greater than the percentage of runs covered. An attempt was made to survey approximately the same percentages of operator runs at each garage, but to maximize the statistical validity of the

results, the routes with lower ridership were surveyed at higher percentages (in some cases up to 100% of the scheduled trips) than routes with higher ridership. After completing the initial round of surveys, supplemental distribution was done on some routes that had low return totals in the initial round.

For each commuter rail line, the more efficient of two potential survey distribution strategies was used. One strategy called for surveys to be distributed at all times to passengers waiting at stations. The other strategy called for surveys to be distributed on-board all trains, either over the length of the route or on the inner half. (Very few commuter rail riders make trips entirely between stations on the outer halves of routes.) Depending on route length, number of stations, service frequency, train length, and expected ridership, on some routes on-board distribution was the most efficient strategy during AM peak hours, but on other routes, on-platform distribution was more efficient. Most survey distribution for outbound and off-peak trains on all lines was done on-board.

On the rapid transit, bus, and commuter rail systems, it was not feasible to have vehicle operators or in-station MBTA personnel distribute survey forms, so distribution was done by CTPS employees or temporary help hired specifically for the project. However, on the commuter boats and the Inner Harbor Ferry, it was expected that during the relatively long times between docks, surveys could be distributed by boat crew members, as they were in the 2000 surveys. This strategy worked satisfactorily on most trips, but it was necessary to have CTPS distributors re-survey some trips.

A.2 SURVEY RESPONSE

For purposes of discussion here, the survey response rate for each mode is defined as the number of usable surveys returned divided by the number of surveys distributed. The sampling rate is defined as the number of usable surveys returned divided by the estimated total number of riders boarding a given line or entering a given station during the survey span. The sampling rate was always lower than the response rate, because some riders who were offered survey forms did not take them, and because it was not feasible to contact every rider to offer a survey form. The response rate figures are understated to the extent that survey forms provided to distributors were left over at the end of assignments but not returned to inventory.

As in past surveys, response rates to the 2008/2009 surveys varied both between modes, and between services within each mode. The table below summarizes the number of surveys distributed, number of usable surveys returned, response rates, estimated total ridership, and sample rates for each of the modes surveyed.

TABLE A-1
2008-2009 Survey Distribution and Response by Mode

Mode	Surveys Distributed	Surveys Returned	Response Rate	Ridership	Sample Rate
Rapid Transit	122,000	22,767	18.7%	296,200	7.7%
Bus	72,000	12,313	17.1%	209,700	5.9%
Commuter Rail	42,000	12,440	29.6%	55,550	22.4%
Greenbush CRR	1,475	526	35.7%	2,075	25.3%
Commuter Boat	1,500	693	46.2%	2,035	34.1%
Inner Harbor Ferry	300	178	59.3%	525	33.9%
Total	239,275	48,917	20.4%	566,085	8.6%

Results for the Greenbush commuter rail line are shown separately from those of the rest of the commuter rail system, because the Greenbush surveys included some questions pertaining only to the line, and the results are in a separate database. It should be noted that from a statistical standpoint, the absolute number of surveys returned may be more important than the percent sample rate, depending on the size of the population being surveyed.

Each survey form included a web address that respondents could use to fill out forms on-line instead of returning the paper form, but only small percentages of riders on each mode used the on-line option. On-line responses are included in the response and sampling rate calculations in the table above.

Passengers who made trips involving more than one of the modes in the table above would be included in the ridership totals for each of the modes they used, but if they received survey forms for more than one of these modes, they probably only completed one of them. To the extent that this occurred, the sample rate shown for the system as a whole understates the percentage of distinct individuals who were surveyed.

A.3 PROCESSING THE SURVEY FORMS

Before being entered in the databases, each survey form was checked for completeness. Forms which did not include responses to enough of the questions to be useful were either included only in the written comments databases, if applicable, or discarded completely. Likewise, forms on which most of the responses were evidently facetious were discarded. Forms that were mostly complete but were missing entries such as boarding station or stop that could be deduced from answers to other questions were corrected as needed.

The survey instructions called for passengers to describe one-way trips that they were making, but some described round trips and reported the same boarding and alighting station. If the correct alighting station could be determined from answers to other questions, it was used in place of the round-trip alighting station. For example, many of the surveys that reported the same boarding and alighting station nevertheless gave different addresses for origin and destination. If the alighting station could not be determined, it was changed to “unspecified.” If the reported origin and destination addresses were the

same, the destination was changed to “unspecified.” Other editing changes included correcting transposition of lines in multi-line entries, such as town name on line for street address and vice-versa.

After the records were entered in the databases, additional checks were made for errors missed in the earlier editing process, and for data-entry errors. Missing boarding or station entry times were filled in based on the times reported on surveys from the same route or stations with serial numbers similar to the ones on the forms with the missing numbers. On surveys with origin or destination addresses in Boston, Cambridge, Somerville, or Brookline, standard neighborhood designations used by CTPS were added to the city or town based on the rest of the reported address or other information on the survey.

A.4 EXPANSION METHODS

To prevent differences in sampling rates among stations or routes from skewing the overall results, it was necessary to apply a weight factor to each survey record. These factors were calculated using the best available ridership data for each mode and line or station. The project budget did not allow for special control counts of ridership to be conducted. However, since the surveys were, to the extent possible, distributed on “representative” weekdays, any ridership count that is also supposed to be for a “representative” weekday should be acceptable for purposes of survey expansion.

As in the case of past surveys, separate weight factors were used for different times of day if enough surveys were returned from different time periods. In the 2008/2009 surveys, the maximum breakdown of time periods used for most modes was 6:00 to 8:29 AM and 8:30 AM or later. Separate weight factors were calculated for inbound and outbound travel unless there were too few responses from one of the directions to use separately.

For the rapid transit system, station entry totals by time period were calculated from the averages of Automated Fare Collection (AFC) data from several days in the Spring of 2009. At most stations, inbound and outbound riders use the same faregates. The AFC totals were split by direction on the basis of past CTPS counts. Similarly, at stations such as Downtown Crossing where faregates are shared by riders going to more than one route, past CTPS counts were used to split AFC totals by route as well as by direction.

Boarding totals for surface Green Line stops were estimated from the most recent CTPS counts at each stop, with adjustments for elimination of outbound free fares in 2007. (Boarding counts at about half of the stops had been done in the fall of 2006.) Boarding totals for stations on the Mattapan High Speed Line were based on counts conducted by CTPS in 2005.

For each bus route, ridership totals by direction and time period were based on the trip summaries from the most recent CTPS ridecheck. In several cases, two or more bus routes overlap for substantial portions of their routes, and riders who could make their trips interchangeably on any of them often listed all or

none of them as the route they were riding when surveyed. For such routes, composite weight factors were usually calculated for the combined routes and applied to all of them.

For the commuter rail system, peak loads by train were taken from the latest figures used by the MBTA's contract operator, Massachusetts Bay Commuter Railroad (MBCR) for purposes of equipment assignment. For inbound trains, boardings by station were estimated by applying factors from MBCR Train Audit reports to the peak load totals. These figures were then grouped to provide one weight factor for peak trains and one for off-peak trains for each station. During the survey hours, commuter rail ridership was much lower outbound than inbound, and no breakdowns of boardings by station were available. Therefore, weight factors were based on peak loads and survey responses, with separate factors at most for peak and off-peak trains but not for different boarding stations.

For the commuter boat and Inner Harbor Ferry services, ridership figures for each boat trip on each day in the week when surveys were distributed were obtained from the MBTA's contract operators of the boats. Ridership totals for the trip with each scheduled departure time on the three mid-week days (July 29, 30, and 31, 2008) were averaged and divided by the number of returned surveys from passengers who were surveyed on a boat departing at that time. In most cases, the ratio calculated for each trip in this manner was used as the weight factor for the records from surveys for that trip. However, when large differences in sampling in a sequence of trips would have resulted in large variations in the weights given to their records, composite factors based on the total ridership and returns for these trips were used instead.

A.5 POTENTIAL PROBLEMS WITH EXIT STATION TABLES

Because the surveys were expanded only to boarding counts, the summaries of data for exit stations for the rapid transit and commuter rail lines and exit docks for the boat lines, may not be well calibrated to the actual number of exits at each location. To the extent that there was bias in the response rates with respect to the exit station or dock, the total passengers shown exiting at that station or dock will vary from the number one would get through a passenger count. For example, suppose that during a certain time interval, 100 passengers enter Station A, and that of these, 50 are going to Station B and 50 are going to Station C. Further suppose that for whatever reason (amount of time on the train, general propensity to fill out surveys, ease of turning in completed surveys at stations), 20% of the riders going to Station C, but only 10% of those going to Station B return surveys. Ten surveys will be received from riders going to Station C, and 5 surveys from riders going to Station B, or a total of 15. Using a weight factor based only on the entry totals at Station A, each survey will be given a weight of $100/15 = 6.67$. The summary tables will therefore show 33 passengers going from Station A to Station B and 67 from Station A to Station C instead of 50 to each.

Calculation of weight factors adjusted both for entry totals at boarding stations and exit totals at alighting stations would require a complex iterative procedure using data that cannot be readily obtained at present. Even then, because of the many different boarding and alighting station combinations and large differences in the actual numbers of riders traveling between each pair, survey samples much larger than those obtained either in 2008/2009 or in past MBTA surveys would be needed in order to obtain highly reliable data on station-to-station travel. When station-to-station totals from the 2008/2009 survey are further divided into origin-destination pairs by city, town, or neighborhood or to even finer levels of detail, very few have sufficient numbers of responses needed for high confidence levels and narrow confidence intervals.

MBTA Bus Passenger Survey

This survey is being conducted to help determine how MBTA bus service can be improved. Please help us by answering as many questions as you can. After completing this survey, please either hand it to a survey distributor on the bus or to a Customer Service Agent at a rapid transit station, or drop it in the mail (no stamp is needed). You may fill out the survey online or get more information about the survey at www.ctps.org/survey/bus/. All answers are confidential. You will not be put on any mailing lists.

THANK YOU!
