Transportation Improvement Program and Air Quality Conformity Determination: Federal Fiscal Years 2016–20

> BOSTON REGION METROPOLITAN PLANNING ORGANIZATION

Endorsed by the Boston Region Metropolitan Planning Organization on July 30, 2015 TRANSPORTATION IMPROVEMENT PROGRAM AND AIR QUALITY CONFORMITY DETERMINATION: FEDERAL FISCAL YEARS 2016–20

Boston Region Metropolitan Planning Organization Staff

Directed by the Boston Region Metropolitan Planning Organization, which is composed of the:

MassDOT Office of Planning and Programming	City of Somerville (Inner Core Committee)		
Massachusetts Bay Transportation Authority	City of Woburn (North Suburban Planning Council)		
Massachusetts Bay Transportation Authority Advisory Board	Town of Arlington (At-Large Town)		
MassDOT Highway Department	Town of Bedford		
Massachusetts Port Authority	(Minuteman Advisory Group on Interlocal Coordination)		
Metropolitan Area Planning Council	Town of Braintree (South Shore Coalition)		
Regional Transportation Advisory Council	Town of Framingham (MetroWest Regional Collaborative)		
City of Boston	Town of Lexington (At-Large Town)		
City of Beverly (North Shore Task Force)	Town of Medway (South West Advisory Planning Committee)		
City of Everett (At-Large City)	Town of Norwood (Three Rivers Interlocal Council)		
City of Newton (At-Large City)	Federal Highway Administration (nonvoting)		
	Federal Transit Administration (nonvoting)		

Boston Region Metropolitan Planning Organization Municipalities

The Boston Region Metropolitan Planning Organization (MPO) complies with Title VI of the Civil Rights Act of 1964, the Americans with Disabilities Act (ADA) and other federal and state nondiscrimination statutes and regulations in all programs and activities. The MPO does not discriminate on the basis of race, color, national origin, English proficiency, income, religious creed, ancestry, disability, age, gender, sexual orientation, gender identity or expression, or military service. Any person who believes herself/himself or any specific class of persons has been subjected to discrimination prohibited by Title VI, ADA, or other non-discrimination statute or regulation may, herself/himself or via a representative, file a written complaint with the MPO. A complaint must be filed no later than 180 calendar days after the date on which the person believes the discrimination occurred. A complaint form and additional information can be obtained by contacting the MPO (see below) or at www.bostonmpo.org.

Please visit **www.ctps.org** to view the full TIP. To request a copy of the TIP in CD or accessible formats, please contact us by any of the following means:

Certification of the Boston Region MPO Transportation Planning Process

The Boston Region Metropolitan Planning Organization certifies that its conduct of the metropolitan transportation planning process complies with all applicable requirements, which are listed below, and that this process includes activities to support the development and implementation of the Regional Long-Range Transportation Plan and Air Quality Conformity Determination, the Transportation Improvement Program and Air Quality Conformity Determination, the Transportation Improvement Program and Air Quality Conformity Determination, and the Unified Planning Work Program.

- 1. 23 USC 134, 49 USC 5303, and this subpart.
- 2. Sections 174 and 176 (c) and (d) of the Clean Air Act, as amended (42 USC 7504, 7506 (c) and (d) and 40 CFR Part 93.
- 3. Title VI of the Civil Rights Act of 1964, as amended (42 USC 2000d-1) and 49 CFR Part 21.
- 4. 49 USC 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity.
- 5. Section 1101(b) of the SAFETEA-LU (Pub. L. 109-59) and 49 CFR Part 26 regarding the involvement of disadvantaged business enterprises in U.S. DOT-funded projects.
- 6. The provisions of the Americans with Disabilities Act of 1990 (42 USC 12101 et seq.) and 49 CFR Parts 27, 37, and 38.
- 7. The Older Americans Act, as amended (42 USC 6101), prohibiting discrimination on the basis of age in programs or activities receiving federal financial assistance.
- 8. Section 324 of Title 23 USC regarding the prohibition of discrimination based on gender.
- 9. Section 504 of the Rehabilitation Act of 1973 (29 USC 794) and 49 CFR Part 27 regarding discrimination against individuals with disabilities.
- 10. Anti-lobbying restrictions found in 49 USC Part 20. No appropriated funds may be expended by a recipient to influence or attempt to influence an officer or employee of any agency, or a member of Congress, in connection with the awarding of any federal contract.

ESE EXECUTIVE SUMMARY Federal Fiscal Years 2016-20 Transportation Improvement Program

INTRODUCTION

The Boston Region Metropolitan Planning Organization's (MPO's) five-year, nearly \$2 billion transportation capital plan, the Transportation Improvement Program (TIP), is the near-term investment program for the region's transportation system. Guided by the MPO's visions and policies, the TIP prioritizes investments that preserve the current transportation system in a state of good repair, provide safe transportation for all modes, enhance livability, and improve mobility throughout the region. These investments fund major highway reconstruction, arterial and intersection improvements, maintenance and expansion of the public transit system, bicycle path construction, and improvements for pedestrians.

The Boston Region MPO is a 22-member board with representatives of state agencies, regional organizations, and municipalities; its jurisdiction extends from Boston north to Ipswich, south to Duxbury, and west to Interstate 495. Each year, the MPO conducts a process to decide how to spend federal transportation funds for capital projects. The Central Transportation Planning Staff (CTPS), which is the staff to the MPO, manages the TIPdevelopment process.

MPO staff coordinate the evaluation of project requests, propose the programming of current and new projects based on anticipated funding levels, support the MPO in the development of a draft document, and facilitate a public review of the draft document before the MPO endorses the final document.

FEDERAL FISCAL YEARS 2016–20 TIP OVERVIEW

The federal fiscal years (FFYs) 2016–20 TIP consists of approximately \$940 million worth of transportation investments in the Highway Program and more than \$1 billion in the Transit Program. These investments reflect the MPO's goal of targeting a majority of transportation resources to preserve and modernize the existing roadway and transit system and maintain it in a state of good repair.

This TIP devotes a more significant portion of funding for the targeted expansion of the rapid transit system and new shared-use paths than previous TIPs. In addition, a number of the infrastructure investments in this TIP address needs identified in the MPO's LongRange Transportation Plan (LRTP), *Charting Progress to 2040,* or implement recommendations from past studies and reports that were funded through the MPO's Unified Planning Work Program.

FFYS 2016–20 TIP INVESTMENTS

Transit Program

The Transit Program of the TIP provides funding for projects and programs that address capital needs that have been given priority by the three transit agencies in the region: the Massachusetts Bay Transportation Authority (MBTA), the Cape Ann Transportation Authority (CATA), and the MetroWest Regional Transit Authority (MWRTA). The Transit Program is predominantly dedicated to achieving and maintaining a state of good repair for all assets throughout the transit system.

Over the next four fiscal years, the MBTA will invest heavily in its bus fleets.

The MBTA will also invest in the MBTA's bridges and tunnels. Funds will also be dedicated to improving accessibility at MBTA subway stations and other light rail, commuter rail, and bus stations throughout the system, as well as the Silver Line. Transit expansion will be funded in the Highway Program as discussed below.

Highway Program

The Highway Program of the TIP funds priority transportation projects advanced by the Massachusetts Department of Transportation (MassDOT) and cities and towns within the 101municipality MPO region. The program is primarily devoted to preserving and modernizing the existing roadway network through the resurfacing of highways, replacement of bridges, and reconstruction of arterial roadways.

Over the next five years, more than \$230 million (25 percent) of funds in the Highway Program will be used to resurface interstate and state routes, replace highway lighting and signage, and add travel lanes and shoulders to more than three miles of Route 128. Approximately \$260 million (27 percent) will be spent to modernize roadways in order to balance the needs of all users—motorists, bicyclists, and pedestrians. Multimodal projects, such as the improvements to Route 9 in Brookline, will improve safety and enhance access for pedestrians, bicyclists, transit riders, and automobiles. In total, roadway modernization projects will improve nearly 50 lane miles of substandard pavement traveled by nearly 500,000 vehicles. These

corridor investments will also add 24 miles of new onroad bicycle accommodations.

Nearly \$260 million (27 percent) of the Highway Program will be used to address functionally obsolete and structurally deficient bridges. These improvements will benefit the more than 600,000 vehicles that cross these substandard bridges on a typical weekday.

The program also invests in the targeted expansion of transit service and bicycle and pedestrian facilities to grow the transit, bicycle, and pedestrian networks. In the TIP, \$158 million (17 percent) of the Highway Program funds are allocated to transit to extend the Green Line beyond College Avenue to Route 16/Mystic Valley Parkway in Medford. Lastly, the MPO will invest nearly \$35 million (4 percent) to

extend rail trails, construct shared-use paths, and improve bicycle and pedestrian facilities around schools. A majority of these facilities will also provide direct access to MBTA stations: the Bruce Freeman Rail Trail will link to the West Concord Station, the Cochituate Rail Trail will connect to the Natick Station, and the New Fenway Multi-use Path will improve access to the Fenway Station and the Yawkey Station.

FINANCING THE FFYS 2016–20 TIP

Transit Program

Funds programmed in the Transit Program of the TIP are allocated by the Federal Transit Administration by formula. The three regional transit authorities in the Boston Region MPO area that are recipients of these funds are the MBTA, CATA, and MWRTA. The MBTA, with its extensive transit program and infrastructure, is the recipient of the preponderance of federal transit funds in the region.

Under the federal transportation legislation, Moving Ahead for Progress in the 21st Century Act (MAP-21), funding is allocated by the following categories:

- Section 5307 (Urbanized Area Formula Grants): provides grants to urbanized areas to support public transportation based on the level of transit service, population, and other factors
- Section 5337 (Fixed Guideway/Bus): seeks to maintain public transportation systems in a state of good repair through replacement and rehabilitation capital projects

• Section 5339 (Bus and Bus Facilities): provides funding to replace, rehabilitate, and purchase buses and related equipment, and to construct bus-related facilities

Highway Program

The Highway Program of the TIP was developed under the assumption that there would be \$600 million of federal dollars available annually over the next five years for highway projects statewide. In Massachusetts, federal highway program funding is allocated to several main funding categories.

First, MassDOT allocates federal funding to Grant Anticipation Notes (GANs) payments. Over the four years of this TIP, approximately \$245 million of the Highway Program is dedicated to GANs payments for the Accelerated Bridge Program. MassDOT matches the remaining amount of federal funding with an 80 percent (federal) and 20 percent (state) split.

Next, MassDOT allocates funding across the following funding categories:

- Statewide Infrastructure Items: interstate highway maintenance, intelligent transportation systems, Safe Routes to School programs, and other infrastructure needs
- Bridge Program: replacement or rehabilitation of public bridges
- Regional Major Infrastructure Projects: modernization of major highway infrastructure (funding for this category will conclude in 2017 after reconstruction of the I-91 Viaduct in Springfield has been completed)

• Other Statewide Items: change orders for existing contracts

After these needs have been satisfied, MassDOT allocates the remaining federal funding among the state's MPOs for programming. This discretionary funding for MPOs is suballocated by formula to determine "Regional Target" amounts. MassDOT develops these targets in consultation with the Massachusetts Association of Regional Planning Agencies. Each MPO can decide how to prioritize their Regional Target funding.

THE TIP DEVELOPMENT PROCESS

Overview

In order to determine which projects to fund through the Regional Target funding process, MPO members collaborate with municipalities, state agencies, members of the public, advocacy groups, and other stakeholders. The MPO's project selection process uses evaluation criteria to help identify and prioritize projects that advance the MPO's goals. The criteria are based on the MPO's visions and policies, which were adopted for its current LRTP, *Paths to a Sustainable Region*. These criteria closely align with the LRTP, *Charting Progress to 2040*, and MPO staff plan to update the evaluation criteria to guide future TIP investments after *Charting Progress to 2040* is finalized.

Outreach and Data Collection

The outreach process begins early in the fiscal year when MPO staff begin to brief local officials and members of the public on the upcoming year's development process. Each November, MPO staff ask the staffs of cities and towns in the region to identify their priority projects for consideration for federal funding. MPO staff compile the project requests and relevant information into a Universe of Projects list for the MPO. The Universe of Projects list includes projects in varied stages of development, from projects in the conceptual stage to those that are fully designed and ready to be advertised for construction. MPO staff also collect data on each project in the universe so that the projects can be evaluated.

Project Evaluation

Once project updates are complete, the staff evaluates projects based on how well they address the MPO's policies in the following categories:

- System Preservation, Modernization, and Efficiency
- Livability and Economic Benefit
- Mobility
- Environment and Climate Change
- Environmental Justice
- Safety and Security

This year, the staff completed evaluations for approximately 50 projects. A basic level of design is needed to provide enough information to fully evaluate a potential TIP project. In some cases, not enough information is available to fully evaluate a project across all six policy categories. The evaluation results are posted on the MPO's website, allowing municipal officials and members of the public to view and provide feedback on the evaluation results.

Staff Recommendation and Draft TIP

MPO staff use the project information and evaluation results to prepare a First-Tier List of Projectsprojects that have received high scores through the TIP evaluation process and could be made ready for advertisement within the time frame of the upcoming TIP. MPO staff then prepare a recommendation for the TIP considering the First-Tier list and other factors, such as the construction readiness of a project, the estimated project cost, community priority, geographic equity (to ensure that needs are addressed throughout the region), and consistency with the MPO's LRTP. The staff recommendation proposes the projects to be funded with the MPO's Regional Target funding over the next five years. This year, the MPO voted to add a fifth year to the TIP in order to align with the first time band of the LRTP.

The staff recommendation is always financially constrained. This year, there was approximately \$440 million available for MPO Regional Target projects in FFYs 2016–20. In April 2015, the staff recommendation was submitted to the MPO and was discussed.

APPROVING THE TIP

The MPO considers the evaluation results, First-Tier List of Projects, and staff recommendation when prioritizing which projects should receive Regional Target funding. In addition to prioritizing the Regional Target funding, the MPO also reviews the Statewide Infrastructure Items and Bridge Programs, as well as the capital programs for the MBTA, CATA, and MWRTA before voting to release a draft TIP for public review.

In mid-June of 2015, the MPO voted to release the draft FFYs 2016–20 TIP for a 30-day public comment period. The MPO invited members of the public, regional and local officials, and other stakeholders in the Boston region to review the proposed program during this period. In addition, several outreach sessions are held during the public comment period to solicit comments on the draft TIP.

After the comment period, the MPO reviewed all of the comments and endorsed the FFYs 2016–20 TIP on July 30, 2015. The MPO-endorsed TIP will be incorporated into the State Transportation Improvement Program (STIP), which is a compilation of TIPs from all of the MPOs in Massachusetts, and sent to the Federal Highway Administration and Federal Transit Administration to enable the document to be approved by the federal agencies by September 30, 2015 before the start of FFY 2016.

UPDATES TO THE TIP

Even after the TIP has been finalized, administrative modifications and amendments often must be introduced because of changes in project status, project cost, or available revenues. This may necessitate reprogramming a project to a later funding year or programming additional funds for a project.

Notices of amendments and administrative modifications are posted on the MPO's website. If an amendment is necessary, the Regional Transportation Advisory Council is informed, and the affected municipalities and other stakeholders are notified through the MPO's email listserv, MPOinfo. The MPO holds a 30-day public comment period before taking action on an amendment. Administrative modifications are generally minor adjustments that usually do not warrant a public comment period.

STAY INVOLVED WITH THE TIP

Public input is an important aspect of the transportation-planning process. Please visit **www.bostonmpo.org** for more information about the MPO, to view the full TIP, and to submit your comments. You may also want to sign up for our email news updates by contacting us at **publicinformation@ctps.org**.

INTRODUCTION TO THE 3C PROCESS

Decisions about how to spend transportation funds in a metropolitan area are guided by information and ideas from a broad group of people, including elected officials, municipal planners and engineers, transportation advocates, other advocates, and other interested persons. Metropolitan planning organizations (MPOs) are the bodies responsible for providing a forum for this decision-making process. Each metropolitan area in the United States with a population of 50,000 or more has an MPO, which decides how to spend federal transportation funds for capital projects and planning studies.

In order to be eligible for federal funds, metropolitan areas are required to maintain a continuing, cooperative, and comprehensive (3C) transportationplanning process that results in plans and programs consistent with the planning objectives of the metropolitan area.¹ The 3C transportation-planning process in the Boston region is the responsibility of the Boston Region MPO, which has established the following objectives for the process:

• Identify transportation problems and develop possible solutions.

- Balance short- and long-range considerations so that beneficial incremental actions adequately reflect an understanding of probable future consequences and possible future options.
- Represent both regional and local considerations as well as both transportation and nontransportation objectives and impacts when analyzing project issues.
- Assist implementing agencies in effecting timely policy and project decisions with adequate consideration of environmental, land-use, social, fiscal, and economic impacts, and with adequate opportunity for participation by other agencies, local governments, and members of the public.
- Help implementing agencies to prioritize transportation activities in a manner consistent with the region's needs and resources.
- Comply with the requirements of Moving Ahead for Progress in the 21st Century (MAP-21); the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU); the Transportation Equity Act for the 21st Century (TEA-21); the Americans with Disabilities Act (ADA); the Clean Air Act; Title VI of the Civil Rights Act of 1964; and Executive Order 12898: Federal Actions to Address Environmental Justice

¹ Section 134 of the Federal-Aid Highway Act and Section 5303 of the Federal Transit Act, as amended.

in Minority Populations and Low-Income Populations.

THE BOSTON REGION MPO

The Boston Region MPO is a 22-member board consisting of state agencies, regional organizations, and municipalities; its jurisdiction extends from Boston north to Ipswich, south to Duxbury, and west to Interstate 495. There are 101 cities and towns that make up this area (as shown in Figure 1-1).

As part of its 3C process, the Boston Region MPO annually produces the Transportation Improvement Program (TIP) and the Unified Planning Work Program (UPWP). These documents, along with the Long-Range Transportation Plan (LRTP), are required for the MPO's process to be certified as meeting federal requirements; this certification is a prerequisite for receiving federal transportation funds.

This TIP was developed and approved by the MPO members listed below. The permanent MPO voting members are the Massachusetts Department of Transportation (MassDOT), Metropolitan Area Planning Council (MAPC), Massachusetts Bay Transportation Authority (MBTA), MBTA Advisory Board, Massachusetts Port Authority (Massport), City of Boston, and Regional Transportation Advisory Council. The elected MPO voting members and their respective seats are:

City of Beverly: North Shore Task Force City of Everett: At-Large City City of Newton: At-Large City City of Somerville: Inner Core Committee City of Woburn: North Suburban Planning Council Town of Arlington: At-Large Town Town of Bedford: Minuteman Advisory Group on Interlocal Coordination Town of Braintree: South Shore Coalition Town of Braintree: South Shore Coalition Town of Framingham: MetroWest Regional Collaborative Town of Lexington: At-Large Town Town of Medway: SouthWest Advisory Planning Committee Town of Norwood: Three Rivers Interlocal Council In addition, the Federal Highway Administration

(FHWA) and the Federal Transit Administration (FHWA) and the Federal Transit Administration (FTA) participate in the MPO as advisory (nonvoting) members. Figure 1-2 shows the organization chart of the MPO membership and the MPO's staff, the Central Transportation Planning Staff (CTPS).

• *MassDOT* was established under Chapter 25 ("An Act Modernizing the Transportation Systems of the Commonwealth of Massachusetts") of the Acts of 2009. It includes four Divisions: Highway, Rail and Transit, Aeronautics, and Registry of Motor Vehicles.

*Several communities are represented by more than one subregional group. Dover is in TRIC and SWAP; Milton and Needham are in ICC and TRIC.

- The MassDOT Highway Division has jurisdiction 0 over the roadways, bridges, and tunnels of the former Massachusetts Highway Department and the Massachusetts Turnpike Authority. It also has jurisdiction over many bridges and parkways previously under the authority of the Department of Conservation and Recreation (DCR). The Highway Division is responsible for the design, construction, and maintenance of the Commonwealth's state highways and bridges. It is also responsible for overseeing traffic safety and engineering activities for the state highway system. These activities include operating the Highway Operations Control Center to ensure safe road and travel conditions
- The *Rail and Transit Division* is responsible for all rail and transit initiatives, and it oversees the MBTA and all Regional Transit Authorities of the Commonwealth. The MassDOT Board of Directors also serves as the governing board of the MBTA.

MassDOT has three seats on the MPO, including one for the Highway Division.

• The *MBTA* has the statutory responsibility within its district, under the provisions of Chapter 161A of the Massachusetts General Laws (MGLs), of preparing the engineering and architectural designs for transit development projects, constructing and operating transit development projects, and operating the public transportation system. The MBTA district comprises 175 communities, including all of the 101 cities and towns of the Boston Region MPO area. A sevenmember board of directors was appointed by the governor of Massachusetts to be the governing body of both MassDOT and the MBTA, which is part of MassDOT but retains a separate legal existence.

- The MBTA Advisory Board was created by the Legislature in 1964 through the same legislation that created the MBTA. The Advisory Board consists of representatives of the 175 cities and towns that compose the MBTA district. Cities are represented by either the city manager or mayor, and towns are represented by the chairperson of the board of selectmen. Specific responsibilities of the Advisory Board include review of and comment on the Program for Mass Transportation (PMT), proposed fare increases, and the annual MBTA Capital Investment Program; review of the MBTA's documentation of its net operating investment per passenger; and review of the MBTA's operating budget.
- Massport has the statutory responsibility under Chapter 465 of the Acts of 1956, as amended, of planning, constructing, owning, and operating such transportation and related facilities as may be necessary for developing and improving commerce in Boston and the surrounding metropolitan area. Massport owns and operates Boston's Logan International Airport, Conley Terminal, Cruiseport Boston, Hanscom Field, Worcester Regional Airport, and various maritime/waterfront properties, including parks, in East Boston, South Boston, and Charlestown.

- The MAPC is the regional planning agency for the • 101 cities and towns in the MAPC/MPO district. It is composed of the chief executive (or her/his designee) of each city and town in the district, 21 gubernatorial appointees, and 12 ex officio members. It has statutory responsibility for comprehensive regional planning in the district under Chapter 40B of the MGLs. It is the Boston Metropolitan Clearinghouse under Section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 and Title VI of the Intergovernmental Cooperation Act of 1968. Its district also has been designated an economic development district under Title IV of the Public Works and Economic Development Act of 1965, as amended. MAPC's responsibilities for comprehensive planning include technical assistance to communities, transportation planning, and the development of zoning, land use, and demographic and environmental studies.
- The City of Boston, six elected cities (currently Beverly, Braintree, Everett, Newton, Somerville, and Woburn), and six elected towns (currently Arlington, Bedford, Framingham, Lexington, Medway, and Norwood) represent the region's 101 municipalities in the Boston Region MPO. The City of Boston is a permanent MPO member (with two seats). There is one elected municipal seat for each of the eight MAPC subregions, and there are four at-large elected municipalities (two cities and two towns). The elected at-large municipalities serve staggered three-year terms, as do the eight municipalities representing the MAPC subregions.

• The *Regional Transportation Advisory Council*, the MPO's public advisory group, provides the opportunity for transportation-related organizations, agencies, and municipal representatives to become actively involved in the decision-making processes of the MPO for planning and programming transportation projects in the region. The Advisory Council reviews, comments on, and makes recommendations for certification documents. It also provides information about transportation topics in the region, identifies issues, advocates for ways to address the region's transportation needs, and generates interest in the work of the MPO among members of the general public.

Two members participate in the Boston Region MPO in an advisory (nonvoting) capacity, reviewing the LRTP, the TIP, and the UPWP to ensure compliance with federal planning and programming requirements:

• The *FHWA* and *FTA* oversee the highway and transit programs of the US Department of Transportation under pertinent legislation and the provisions of MAP-21.

Two other entities assist MPO members in carrying out the responsibilities of the MPO's 3C planning process through policy implementation, technical support, and public participation:

• The *CTPS* was created by the MPO to carry out general and 3C transportation-planning activities on behalf of the MPO and to provide agencies with analyses required for their decision-making.

Figure 1-2: Boston Region MPO Organizational Chart

 The MAPC subregional groups bring together representatives (usually appointed or elected officials or their staff) of the communities within a subregion of the MAPC district to address shared concerns regarding transportation and land-use issues. MAPC has promoted and supported the formation of subregional groups in order to foster better communication and cooperation among communities. It has played an important role in the MPO's participatory process, including developing the TIP and UPWP project priorities.

CERTIFICATION DOCUMENTS

The following section briefly describes the three documents produced by the MPO as part of its federally required 3C process:

The Long-Range Transportation Plan and Air Quality Conformity Determination (LRTP) guides investment in the transportation system of the Boston metropolitan region for at least the next 20 years. It defines an overarching vision of the future of transportation in the region, establishes goals and objectives that will lead to the achievement of that vision, and allocates projected revenue to transportation projects and programs consistent with established goals and objectives. The Boston Region MPO produces an LRTP every four years. Paths to a Sustainable Region, the LRTP endorsed by the MPO in 2011, was in effect during development of this document. The MPO is schedule to endorse its next LRTP, Charting Progress to 2040, in 2015.

- The Transportation Improvement Program and Air Quality Conformity Determination (TIP) is a multivear, intermodal program of transportation improvements that is consistent with the LRTP. It describes and prioritizes transportation projects that are expected to be implemented during a fouryear period. The types of transportation projects funded include major highway reconstruction and maintenance, arterial and intersection improvements, public transit expansion and maintenance, bicycle paths and facilities, and improvements for pedestrians. The TIP contains a financial plan that shows the revenue source or sources, current or proposed, for each project. The TIP serves as the implementation arm of the MPO's LRTP, and the Boston Region MPO updates the TIP annually. An MPO-endorsed TIP is incorporated into the State Transportation Improvement Program for its submission to FHWA, FTA, and the Environmental Protection Agency for approval.
- The UPWP contains information about surface transportation planning projects that will be conducted in the Boston metropolitan region. The UPWP has a one-year scope and is produced annually. The UPWP is an essential planning tool for the region and often a first step in determining whether or not a project will be implemented. It is integrally related to other planning initiatives conducted by the Boston Region MPO, as well as by MassDOT, the MBTA, and Massport.

CONSISTENCY WITH FEDERAL PLANNING REGULATIONS

MAP-21 Legislation

MAP-21 legislation requires all MPOs to carry out the 3C process. To meet this requirement, MPOs must perform the following activities:

- Produce the LRTP, the TIP, and the UPWP.
- Establish and oversee the public-participation process.
- Maintain transportation models and data resources to support air-quality conformity determinations as well as long- and short-range planning work.

MAP-21 legislation establishes national goals for federal highway programs, including:

- 1. Safety: Achieve significant reduction in traffic fatalities and serious injuries on all public roads.
- 2. Infrastructure condition: Maintain the highway infrastructure asset system in a state of good repair.
- 3. Congestion reduction: Achieve significant reduction in congestion on the National Highway System.
- 4. System reliability: Improve efficiency of the surface transportation system.

- 5. Freight movement and economic vitality: Improve the national freight network, strengthen the ability of rural communities to access national and international trade markets, and support regional economic development.
- 6. Environmental sustainability: Enhance performance of the transportation system while protecting and enriching the natural environment.
- 7. Reduced project delivery delays: Reduce project costs, promote jobs and the economy, and expedite movement of people and goods by accelerating project completion while eliminating delays in the development and delivery process, lessening regulatory burdens, and improving work practices of the agencies.

MAP-21 also establishes performance-based planning as an integral part of the metropolitan planning process. Under MAP-21, states will develop performance goals, guided by the national goals cited in MAP-21, and MPOs will work with state departments of transportation (DOTs) to develop MPO performance targets. The TIP will integrate the MPO's performance measures and link transportation-investment decisions to progress toward achieving performance goals.

CONSISTENCY WITH OTHER FEDERAL LEGISLATIVE REQUIREMENTS

The Clean Air Act of 1990

Air-quality conformity determinations must be performed for capital improvement projects that receive federal funding and for those that are considered regionally significant, regardless of the funding source. These determinations must show that the MPO's LRTP and TIP will not cause or contribute to any new air-quality violations, will not increase the frequency or severity of any existing air-quality violations in any area, and will not delay the timely attainment of the air-quality standards in any area.

Transportation control measures identified in the State Implementation Plan for the attainment of airquality standards are federally enforceable and must be given first priority when using federal funds. Such projects include parking-freeze programs in Boston and Cambridge, statewide rideshare programs, rapidtransit and commuter-rail extension programs, parkand-ride facilities, residential parking-sticker programs, and the operation of high-occupancyvehicle lanes.

Nondiscrimination Mandates

The Boston Region MPO complies with Title VI of the Civil Rights Act of 1964, the ADA, and other federal and state nondiscrimination statutes and regulations in all of its programs and activities. The MPO does not discriminate on the basis of race, color, national origin, English proficiency, income, religious creed, ancestry, disability, age, gender, sexual orientation, gender identity or expression, or military service. The major federal requirements are discussed below.

Title VI of the Civil Rights Act of 1964

This statute requires that no person be excluded from participation in, be denied the benefits of, or be subjected to discrimination on the basis of race, color, or national origin under any program or activity provided by an agency receiving federal financial assistance.

Executive Order 13166, dated August 11, 2000, extends Title VI protections to persons who, as a result of national origin, have limited English-language proficiency (LEP). Specifically, it calls for improved access to federally conducted and assisted programs and activities and requires MPOs to develop and implement a system by which LEP persons can meaningfully participate in the transportation-planning process.

Environmental Justice Executive Orders

Executive Order 12898, dated February 11, 1994, further expands upon Title VI, requiring each federal agency to achieve environmental justice by identifying and addressing any disproportionately high adverse human health or environmental effects, including interrelated social and economic effects, of its programs, policies, and activities on minority or lowincome populations.

On April 15, 1997, the US Department of Transportation issued its Final Order to Address Environmental Justice in Minority Populations and Low-Income Populations. Among other provisions, this order requires programming and planning activities to:

- Explicitly consider the effects of transportation decisions on minority and low-income populations.
- Provide meaningful opportunities for public involvement by members of minority and low-income populations.
- Gather (where relevant, appropriate, and practical) demographic information such as the race, color, national origin, and income level of the populations affected by transportation decisions.
- Minimize or mitigate any adverse impact on minority or low-income populations.

The ADA

Title III of the ADA requires all transportation projects, plans, and programs to be accessible to people with disabilities. At the MPO level, this means that public meetings must be held in accessible buildings and MPO materials must be made available in accessible formats.

Executive Order 13330

This executive order, dated February 26, 2004, calls for the establishment of the Interagency Transportation Coordinating Council on Access and Mobility under the aegis of the Secretary of Transportation. This executive order reinforces both environmental justice and ADA requirements by charging the Council with developing policies and methods for improving access for people with disabilities, low-income persons, and older adults.

CONSISTENCY WITH STATE REQUIREMENTS

Global Warming Solutions Act

The Global Warming Solutions Act (GWSA) makes Massachusetts a leader in setting aggressive and enforceable greenhouse gas (GHG) reduction targets and implementing policies and initiatives to achieve these targets. In keeping with this law, the Massachusetts Executive Office of Energy and Environmental Affairs, in consultation with other state agencies and the public, developed the Massachusetts Clean Energy and Climate Plan for 2020. This implementation plan, released on December 29, 2010, establishes the following targets for overall statewide GHG emissions:

- By 2020: 25 percent reduction below statewide 1990 GHG emission levels
- By 2050: 80 percent reduction below statewide 1990 GHG emission levels

GREENDOT POLICY

The transportation sector is the single largest contributor of GHGs, accounting for more than onethird of GHG emissions, and therefore is a major focus of the Clean Energy and Climate Plan for 2020. MassDOT's approach to supporting implementation of the plan is presented in its GreenDOT Policy Directive, a comprehensive sustainability initiative that sets three principal objectives:

• **Reduce GHG emissions.** MassDOT will achieve this by taking GHG emissions into account in all of

its responsibilities, from strategic planning to project design and construction and system operations.

- Promote the healthy transportation modes of walking, bicycling, and taking public transit. MassDOT will achieve this by pursuing multimodal Complete Streets design standards, providing choices in transportation services, and working with MPOs and other partners to prioritize and program a balance among projects that serve drivers, pedestrians, bicyclists, and public transit riders.
- To support smart-growth development. MassDOT will achieve this by working with MPOs and other partners to make transportation investments that make denser smart-growth development patterns, which support reduced GHG emissions, possible.

The Commonwealth's 13 MPOs are integrally involved in helping to achieve the GreenDOT objectives and supporting the GHG reductions mandated under the GWSA. The MPOs seek to realize these objectives by prioritizing projects in the LRTP and TIP. The Boston Region MPO's TIP project evaluation criteria are used to score projects based on GHG emissions impacts, multimodal Complete Streets accommodations, and their ability to support smart-growth development. Tracking and evaluating GHG emissions by project will enable the MPOs to identify anticipated GHG impacts of the planned and programmed projects and also to use GHG impacts as a criterion to prioritize transportation investments.

COORDINATION WITH OTHER PLANNING ACTIVITIES

LRTP

The MPO considered the degree to which a proposed TIP project would advance the goals and objectives that guided the development of its LRTP. The MPO also reviewed TIP projects within the context of the recommended projects included in the LRTP.

UPWP

The MPO aims to implement the recommendations of past studies and reports of the UPWP. This information was considered by the MPO in the development of the draft TIP.

Congestion Management Process

The purpose of the Congestion Management Process (CMP) is to 1) monitor and analyze the performance of facilities and services; 2) develop strategies for the management of congestion based on the results of monitoring; and 3) move these strategies into the implementation stage by providing decision makers in the region with information and recommendations for the improvement of transportation system performance. The CMP monitors roadways and park-and-ride facilities in the MPO region for safety, congestion, and mobility, and identifies "problem" locations. Projects that help address problems identified in the most recent CMP monitoring were considered for inclusion in this TIP.

The MBTA's PMT

In 2009, the MBTA adopted its current PMT, which is the MBTA's long-range capital plan. The PMT was

developed with extensive public involvement and was approved by the MBTA Advisory Board. The next PMT development process will begin in 2015 and identify a set of achievable investments that will help the MBTA and MassDOT advance towards a future transit system that meets our statewide mobility goals and objectives.

MetroFuture

MetroFuture, which was developed by MAPC and adopted in 2008, is the long-range plan for land use, housing, economic development, and environmental preservation in the Boston region. It includes a vision for the region's future and a set of strategies for achieving that future, and it was adopted as the future land-use scenario for the MPO's LRTP, *Paths to a Sustainable Region*. MetroFuture's goals, objectives, and strategies were considered in the development of this TIP.

youMove Massachusetts and weMove Massachusetts

A statewide initiative designed as a bottom-up approach to transportation planning, youMove Massachusetts (YMM) developed 10 core themes derived from a broad-based public participation process that articulated the expressed concerns, needs, and aspirations of Massachusetts residents related to their transportation network. These themes formed the basis for the YMM Interim Report (2009), and they were considered in the development of this TIP.

MassDOT's statewide strategic multimodal plan, weMove Massachusetts (WMM) is a product of the

transportation reform legislation of 2009 and the YMM civic engagement process. In May 2014, MassDOT released *WMM: Planning for Performance*, the Commonwealth of Massachusetts' 2040 LRTP. WMM identifies high-level policy priorities that were considered in the development of this TIP. WMM also incorporates performance management into investment decision-making to calculate the differences in performance outcomes resulting from different funding levels available to MassDOT. In the future, MassDOT will use this scenario tool to update and refine investment priorities. The TIP builds on this data-driven method to prioritize transportation investments.

Healthy Transportation Compact

The Healthy Transportation Compact (HTC) is a major requirement of the Massachusetts landmark transportation reform legislation that took effect on November 1, 2009. It is an interagency initiative that will help ensure that the transportation decisions made by the Commonwealth balance the needs of all transportation users, expand mobility, improve public health, support a cleaner environment, and create stronger communities.

The agencies work together to achieve positive health outcomes by coordinating land use, transportation, and public health policy. HTC membership is made up of the Secretary of Transportation or designee (cochair), the Secretary of Health and Human Services or designee (co-chair), the Secretary of Energy and Environmental Affairs or designee, the Administrator of Transportation for Highways or designee, the Administrator of Transportation for Mass Transit or designee, and the Commissioner of Public Health or designee.

The HTC also promotes improved coordination among the public and private sectors and advocacy groups, as well as transportation, land-use, and public health stakeholders. As part of the framework for the HTC, MassDOT established a Healthy Transportation Advisory Group comprised of advocates and leaders in the fields of land-use, transportation, and public health policy.

Accelerated Bridge Program

The \$3 billion Patrick-Murray Accelerated Bridge Program (ABP) represents a monumental investment in Massachusetts' bridges. This program will greatly reduce the number of structurally deficient bridges in the state system while creating thousands of construction jobs.

To complete this program, MassDOT and the DCR have relied on innovative and accelerated project development and construction techniques. As a result, projects have been completed on time, on budget, and with minimal disruption to people and commerce.

Since 2008, the number of former structurally deficient bridges has dropped from 543 to 416, a decline of more than 23 percent. As of May 1, 2015, the ABP has completed 167 bridge projects, with another 26 bridge projects in construction and an additional 6 bridge projects scheduled to start construction within the next calendar year. Over the course of the eight-year ABP program, more than 250 bridges will be replaced or repaired.

MassDOT Mode Shift Goal

In the fall of 2012. MassDOT announced a statewide mode shift goal: to triple the share of travel in Massachusetts that uses bicycling, transit, and walking. The mode shift goal aims to foster improved quality of life by enhancing our environment and preserving the capacity of our highway network. In addition, positive public health outcomes will be achieved by providing more healthy transportation options. On September 9, 2013, MassDOT passed the Healthy Transportation Policy Directive to formalize its commitment to implementing and maintaining transportation networks that serve all mode choices. This directive will ensure that all MassDOT projects are designed and implemented in ways that would provide all customers with access to safe and comfortable walking, bicycling, and transit options.

CONSISTENCY WITH MPO POLICIES

In choosing projects to include in the TIP, the Boston Region MPO considers the degree to which a project promotes the following MPO policies that were adopted in April 2010 and are the basis for the TIP evaluation process:

System Preservation, Modernization, and Efficiency

Maximizing efficiency, reliability, mobility, and accessibility within our existing infrastructure while taking into account current and ongoing fiscal constraints will require following a program of strategic needs-based investments. To accomplish this, the MPO will put a priority on programs, services, and projects that will:

- Develop low-cost strategies and pursue alternative funding sources and mechanisms.
- Use intelligent transportation systems (ITS), new technologies, transportation systems management, and management and operations and will turn to technology before expansion.
- Bring the transportation network—particularly the transit, bicycle, and pedestrian systems—into a state of good repair, maintain them at that level, and set funding levels to make this possible.
- Maintain bridges and roads.
- Support the increase of Chapter 90 (the grant program to fund municipalities' highway capital improvements) funding so that local road maintenance can remain funded by that program.

Livability

To make livability a hallmark of communities in the MPO region and to achieve mobility, foster sustainable communities, and expand economic opportunities and prosperity, the MPO will put a priority on programs, services, and projects that:

 Are consistent with MetroFuture land-use planning. This means supporting transportation projects serving already-developed locations of residential or commercial/industrial activity; locations with adequate sewer and water infrastructure; areas identified for economic development by state, regional, and local planning agencies; and areas with relatively high-density development. $^{2} \ensuremath{\mathsf{C}}$

- Support health-promoting transportation options, such as bicycle and pedestrian modes, and activities that reduce single-occupant-vehicle use and overall vehicle-miles (VMT) traveled.
- Expand and close gaps in the bicycle and pedestrian network and promote a Complete Streets philosophy.
- Support transportation design and reasonably priced enhancements that protect community cohesiveness, identity, and quality of life.

Mobility

To improve mobility for people and freight, the MPO will put a priority on programs, services, and projects that:

- Strengthen existing connections and create new connections within and between modes.
- Improve access to transit for all persons and provide accessibility of transit for people with disabilities.
- Improve the frequency, span, and reliability of transit services.

² MetroFuture is MAPC's 30-year plan for our region, which serves as a guide for work in all areas of the agency. The MetroFuture plan supports a vision of smart growth and regional collaboration through the promotion of efficient transportation systems, conservation of land and natural resources, improvement of residents' health and education, and an increase in equitable economic-development opportunities for prosperity.

- Expand transit, bicycle, and pedestrian networks while focusing bicycle investments (lanes and paths) on moving people between activity centers and linking with transit.
- Integrate payment methods for fares and parking across modes.
- Support transportation-demand management, Transportation Management Associations, shuttles, and carpooling.
- Address capacity constraints and bottlenecks in the existing roadway system using low-cost approaches (transportation system management strategies, management and operations strategies, ITS, and new technologies) before expansion.

Environment

To protect the environment and minimize the impacts from transportation systems, the MPO will put a priority on programs, services, and projects that:

- Improve transportation in areas of existing development, which will reduce pressure to develop greenfields and possibly support development that will clean up brownfields for productive use.
- Promote energy conservation, fleet management and modernization, and high-occupancy travel options to reduce fuel consumption and emissions of pollutants.
- Protect community character and cultural resources.

- Protect natural resources by planning early to avoid or mitigate impacts on storm water or groundwater and on other resources.
- Protect public health by reducing air pollutants, including fine particulates, and avoid funding projects that increase exposure of at-risk populations to ultrafine particulates.
- Lower the life-cycle costs from construction to operation.
- Increase the mode share for transit and nonmotorized modes.
- Promote energy conservation and the use of alternative energy sources.
- Promote a context-sensitive design philosophy consistent with the MassDOT Highway Division design guidelines.

Transportation Equity

To provide for the equitable sharing of the benefits and burdens of transportation investments among all residents of the region, the MPO will put a priority on programs, services, and projects that:

- Continue outreach to low-income and minority residents and expand data collection and analysis that include the elderly, youth, and LEP populations in order to identify transportation needs.
- Continue to monitor system performance.
- Address identified transportation equity issues and needs related to service and to removing or

minimizing burdens (air pollution, unsafe conditions, community impacts).

- Track implementing agencies' actions responding to transportation needs identified in MPO outreach and analysis that are related to transportation equity and encourage action to address these needs.
- Strengthen avenues for involving low-income and minority persons in decision-making.
- Reduce trip times for residents of low-income and minority neighborhoods and increase transit service capacity.
- Give priority to heavily used transit services over new, yet-to-be-proven services.

Climate Change

To meet targets for reducing GHG emissions, the MPO will put a priority on programs, services, and projects that:

- Implement action to meet defined targets for reducing VMT and tie transportation funding to VMT reduction.
- Support stronger land-use and smart growth strategies.
- Increase transit, bicycle, and pedestrian options.
- Invest in adaptations that protect critical infrastructure from the effects of climate change.
- Encourage strategies that utilize transportationdemand management.

- Promote fleet management and modernization, idling reduction, and alternative fuel use.
- Contribute to reduced energy use in the region. Energy use will be part of the environmentalimpact analysis of all projects.

Safety and Security

To provide for maximum transportation safety and to support security in the region, the MPO will put a priority on programs, services, and projects that:

- Implement actions stemming from all-hazards planning.
- Maintain the transportation system in a state of good repair.
- Use state-of-the-practice safety elements, address roadway safety deficiencies (after safety audits) in order to reduce crashes, and address transit safety (which will include following federal mandates).
- Support incident-management programs and ITS.
- Protect critical transportation infrastructure from natural hazards and human threats, address transit security vulnerabilities, and upgrade key transportation infrastructure to a "hardened" design standard.
- Improve safety for pedestrians and cyclists and ensure that safety provisions are incorporated into shared-use corridors.

- Reduce the severity of crashes, especially via measures that improve safety for all.
- Promote safety through supporting the reduction of base speed limits (in municipalities) to 25 mph and through education about and enforcement of rules of the road for all modes of transportation that use the roadways.
- Improve the transportation infrastructure to better support emergency response and evacuations.

In the development of the LRTP, *Charting Progress to 2040* (endorsed in July 2015), the Boston Region MPO updated its vision, goals, and objectives. These updated goals and objectives, listed on the following pages, will guide future investment decisions through the LRTP, TIP, and UPWP. Following the MPO's endorsement of *Charting Progress to 2040*, MPO staff will update the TIP evaluation criteria to align future investment decisions with the new goals and objectives.

CENTRAL VISION STATEMENT

The Boston Region Metropolitan Planning Organization envisions a modern transportation system that is safe, uses new technologies, provides equitable access, excellent mobility, and varied transportationoptions—in support of a sustainable, healthy, livable, and economically vibrant region.

GOALS	OBJECTIVES	
SAFETY		
Transportation by all modes will be safe	 Reduce number and severity of crashes, all modes Reduce serious injuries and fatalities from transportation Protect transportation customers and employees from safety and security threats (Note: The MPO action will be to incorporate security investments into capital planning.) 	
SYSTEM PRESERVATION		
Maintain the transportation system	 Improve condition of on- and off-system bridges Improve pavement conditions on MassDOT-monitored roadway system Maintain and modernize capital assets, including transit assets, throughout the system Prioritize projects that support planned response capability to existing or future extreme conditions (sea level rise, flooding, and other natural and security-related man-made hazard Protect freight network elements, such as port facilities, that are vulnerable to climate-chang impacts 	
CLEAN AIR/CLEAN COMMUNI	TIES	
Create an environmentally friendly transportation system	 Reduce greenhouse gases generated in the Boston region by all transportation modes as outlined in the Global Warming Solutions Act 	

- Reduce other transportation-related pollutants
- · Minimize negative environmental impacts of the transportation system
- Support land use policies consistent with smart and healthy growth

ECONOMIC VITALITY Ensure our transportation network provides a strong foundation for economic vitality Minimize the burden of housing and transportation costs for residents in the region Prioritize transportation investments that serve targeted development sites Prioritize transportation investments consistent with the compact-growth strategies of MetroFuture

CENTRAL VISION STATEMENT (CONT.)

The Boston Region Metropolitan Planning Organization envisions a modern transportation system that is safe, uses new technologies, provides equitable access, excellent mobility, and varied transportationoptions—in support of a sustainable, healthy, livable, and economically vibrant region.

GOALS	OBJECTIVES	
CAPACITY MANAGEMENT/MC	BILITY	
Use existing facility capacity more efficiently and increase healthy transportation capacity	 Improve reliability of transit Implement roadway management and operations strategies, constructing improvements to the bicycle and pedestrian network, and supporting community-based transportation Create connected network of bicycle and accessible sidewalk facilities (at both regional and neighborhood scale) by expanding existing facilities and closing gaps Increase automobile and bicycle parking capacity and usage at transit stations Increase percentage of population and places of employment within one-quarter mile of transit stations and stops Increase percentage of population and places of employment with access to bicycle facilities Improve access to and accessibility of transit and active modes Support community-based and private-initiative services and programs to meet last mile, reverse commute and other non-traditional transit/transportation needs, including those of the elderly and persons with disabilities Eliminate bottlenecks on the freight network Enhance intermodal connections Emphasize capacity management through low-cost investments; give priority to projects that focus on lower-cost O&M-type improvements such as intersection improvements and Complete Streets solutions 	
TRANSPORTATION EQUITY		
Provide comparable	 Target investments to areas that benefit a high percentage of low-income and minority 	

Provide comparable transportation access and service quality among communities, regardless of income level or minority population

- Target investments to areas that benefit a high percentage of low-income and minority populations
- Minimize any burdens associated with MPO-funded projects in low-income and minority areas
- Break down barriers to participation in MPO-decision making

INTRODUCTION TO THE TIP PROCESS

How to allocate scarce funds while realizing the best possible transportation system is one of the most important decisions an MPO faces in planning for its region's future. Transportation improvements form part of the solution to many critical regional, state, national, and even global problems, such as traffic congestion, air pollution, traffic fatalities and injuries, climate change, and environmental justice. Because there is not nearly enough funding available to build all of the necessary and worthy projects that would address these problems, MPOs' investments choices must be guided by policies that help identify the most viable solutions.

Thus, each year, the Boston Region MPO conducts a TIP development process that prioritizes transportation investments and helps the MPO decide how to spend federal transportation funds for capital projects. The Central Transportation Planning Staff to the Boston Region MPO manages the annual development process for the TIP. MPO staff help evaluate project requests, propose programming of new and current projects based on anticipated funding levels, support the MPO by creating a draft TIP document, and facilitate a public review of the draft before the MPO endorses the final document.

FINANCING THE PROGRAM

Federal Framework

The first step in allocating federal transportation funds is a multiyear authorization act that establishes a maximum level of federal transportation funding per federal fiscal year. Establishing this level of funding is referred to as an authorization. The most recent authorization act is Moving Ahead for Progress in the 21st Century (MAP-21), which was signed into law on July 6, 2012.

Once the authorization level has been established, the United States Department of Transportation annually allocates funding among the states, based on various federal formulas. This allocation is referred to as an apportionment. The annual apportionment rarely represents the actual amount of federal funds that are committed to a state because of federally imposed funding limitations on spending in a given fiscal year, referred to as the obligation authority.

Obligation authority may be imposed in a multiyear authorization act, in the annual appropriations act, or in both. Obligation authority is typically less than a state's apportionment. In Massachusetts, TIPs are developed based on the estimated obligation authority.

Two of the most important distinctions between apportionment and obligation authority are: 1) apportionment is allocated on a per-program basis, while obligation authority is generally allocated as a lump sum; and 2) unused apportionment carries forward into successive federal fiscal years (FFYs), but unused obligation authority does not. Unused apportionment that is carried forward is referred to as an unobligated balance. Although a state's unobligated balance can be used to increase the amount of federal aid programmed within a particular funding category in a given FFY, it cannot be used to increase the total amount of the state's highway apportionment.

Federal Highway Program

Federal regulations require states to "provide MPOs with estimates of Federal and State funds which the MPOs shall utilize in developing financial plans" for TIPs.¹ The FFYs 2016–20 TIP was developed with the assumption that the Statewide Federal Highway Program funding would be \$600 million annually for the next four years. In Massachusetts, federal highway program funding is allocated to several major funding categories. First, MassDOT allocates federal funding to repay Grant Anticipation Notes (GANs) used to fund the Accelerated Bridge Program. During the four years of this TIP, approximately \$245 million of the Highway Program is dedicated to GANs payments for the Accelerated Bridge Program. MassDOT matches the remaining amount of federal funding with an 80 percent (federal) and 20 percent (state) split. Next, MassDOT allocates funding based on the following categories:

- Statewide Infrastructure Items: interstate highway maintenance, intelligent transportation systems, Safe Routes to Schools programs, and other infrastructure needs
- **Bridge Program**: replacement or rehabilitation of public bridges
- **Regional Major Infrastructure Projects:** modernization of major highway infrastructure
- Other Statewide Items: change orders for existing contracts

In FFY 2017, MassDOT will end funding for the Regional Major Infrastructure Program after reconstruction of the I-91 Viaduct in Springfield has been completed. These funds will be reallocated to the Regional Target program for prioritization by MPOs across the state.

After these needs have been satisfied, the remaining federal funding is allocated to the state's MPOs for programming. This discretionary funding for MPOs is suballocated by formula to determine "regional target" amounts, which are developed in consultation with the Massachusetts Association of Regional Planning Agencies. Each MPO decides how its Regional Target funding is prioritized. During the next five years, the Boston Region MPO's total Regional Target Program funding is approximately \$440 million, an average of \$88 million annually. To decide how to

¹ From the 23 Code of Federal Regulations (CFR) 450.324(e).

spend its Regional Target funding, the Boston Region MPO engages its 101 cities and towns in an annual development process.

Federal Transit Program

The Federal Transit Program is allocated within the Boston Urbanized Area (UZA) by formula to the transit service operators. The formula considers passenger-miles, population density, and other factors associated with each transit provider. The three regional transit authorities (RTAs) in the Boston Region MPO area are the MBTA, MWRTA, and CATA. The MBTA, with its extensive transit program and infrastructure, is the recipient of the preponderance of federal transit funds in the region.

Funding Programs

Many federal-aid transportation programs support transportation activities in metropolitan areas, each area having different requirements and program characteristics. Non-federal aid (state funds) for the statewide infrastructure items, the bridge program, and the regional targets is derived from various sources, including the Commonwealth's Transportation Bond Bill. Under MAP-21, federal programs that fund projects in the FFYs 2016–20 TIP are listed in the following two tables.

MAP-21 Program	Eligible Uses	Examples
Urbanized Area Formula Grants (Section 5307)	Transit capital and operating assistance in urbanized areas. Under MAP-21, job access and reverse-commute activities (formerly funded under Section 5316) are now eligible for funding under Section 5307.	Preventive Maintenance – FFYs 2016–19
Fixed Guideway/Bus (Section 5337)	Replacement, rehabilitation, and other state-of-good-repair capital projects.	MBTA Bridge and Tunnel Program – FFYs 2016–19
Bus and Bus Facilities (Section 5339)	Capital projects to replace, rehabilitate, and purchase buses and related equipment, and to construct bus-related facilities.	MBTA Systems Upgrades Program – FFYs 2016–19
Enhanced Mobility of Seniors and Individuals with Disabilities (Section 5310)	Capital expenses that support transportation to meet the special needs of older adults and persons with disabilities. Under MAP-21, New Freedom program (Section 5317) activities are now eligible under Section 5310.	

TABLE 2-1 Federal Transit Administration Programs

MAP-21 Program **Eligible Uses Examples** A wide range of projects in air quality nonattainment Congestion Mitigation and Air Quality Green Line Extension Project and maintenance areas for ozone. carbon monoxide. (Phase 2), College Avenue to Improvement (CMAQ) and small particulate matter, which reduce Mystic Valley Parkway/Route transportation-related emissions. 16- FFYs 2016-20 Highway Safety Improvement Program Implementation of infrastructure-related highway Reconstruction of Route 85/ (HSIP) safety improvements Maple Street (Marlborough) -FFY 2017 National Highway Performance Improvements to interstate routes, major urban and Route 128 Improvement Program (**NHPP**) Program (Needham and rural arterials, connectors to major intermodal facilities, and the national defense network. Also Wellesley) - FFYs 2016-18 includes replacing or rehabilitating any public bridge, and resurfacing, restoring, and rehabilitating routes on the Interstate Highway System. Surface Transportation Program (**STP**) A broad range of surface transportation capital needs, Reconstruction and Widening including roads; transit, sea, and airport access; and on Route 18 (Weymouth and vanpool, bicycle, and pedestrian facilities. Abinaton) – FFYs 2016–19 **Transportation Alternatives Program** Construction of infrastructure-related projects (for Veterans Memorial School (TAP) example, sidewalk, crossing, and on-road bicycle (Saugus) - FFY 2016 facility improvements). Under MAP-21, Safe Routes to School Program and Recreational Trails Program are now eligible under TAP. Specific, named projects for which funds are carried High-Priority Projects (HPP) Traffic Signal Improvements on over from previous authorizations. Blue Hill Avenue and Warren [Carried over from SAFETEA-LU] Street (Boston) - FFY 2018 **Discretionary Funding** Specific projects included annual appropriations that are funded through grant programs such as the Transportation, Community, and System Preservation Program; Value Pricing Pilot Program; and Transportation Infrastructure Finance and Innovation Act Program.

TABLE 2-2 Federal Highway Administration Programs
DEVELOPING THE TIP

Highway Discretionary ("Regional Target") Funding Project Selection Process

Overview

The MPO's project selection process for highway discretionary ("regional target") funding uses evaluation criteria to help identify and prioritize projects that advance the MPO's goals. The criteria are based on the MPO's visions and policies, which were adopted for its current Long-Range Transportation Plan, *Paths to a Sustainable Region*. These criteria closely align with the LRTP, *Charting Progress to 2040*, and MPO staff plan to update the evaluation criteria to guide future TIP investments after *Charting Progress to 2040* is finalized.

All projects are required to show consistency with the Long-Range Transportation Plan and other statewide and regional plans.

The MPO staff evaluates each project that is considered for inclusion in the TIP based on the specific criteria that were developed by the MPO. Other criteria include project readiness and municipal support. Background information about the TIP project evaluation process is presented in Appendix B and on the MPO's website, www.bostonmpo.org. The MPO reviews the effectiveness of this evaluation method and alters the process as appropriate.

Outreach and Data Collection (November 2014– February 2015)

The outreach process begins early in the federal fiscal year, when MPO staff begin to brief local officials and members of the public on the year's development process. Each November. MPO staff asks the staffs of cities and towns in the region to identify their priority projects for consideration for federal funding. The MPO also solicits input from interested parties and members of the general public. The staff then compiles the project funding requests and relevant information into a Universe of Projects list for the MPO. The Universe of Projects list consists of all of the identified projects being advanced for possible funding; including projects in various stages of development, from the conceptual stage to the stage when a project is fully designed and ready to be advertised for construction.

New projects must be initiated by the MassDOT Highway Division before they can be considered for programming in the TIP. Details of the project initiation process and relevant documents can be found on MassDOT's Project Review Committee's webpage, www.mhd.state.ma.us. Municipal TIP Contacts and the MPO staff coordinate with each other to update each project's Project Funding Application Form through the MPO's Interactive TIP Database, www.bostonmpo.org. The form provides information on a project's background, conditions and needs of the existing infrastructure, development status, and a project's potential to help the region attain the MPO's visions. More information on the Project Funding Application Forms is presented in Appendix B.

The MPO has begun to monitor the anticipated greenhouse gas (GHG) emission impacts of planned and programmed projects, in order to consider these impacts when prioritizing transportation investments. For more information on the GHG emission monitoring and evaluation, see Appendix C.

Evaluation of Projects (February–March 2015)

The MPO uses TIP project-evaluation criteria to develop a numeric score that indicates how well a project would help the region attain the MPO's visions. This score can be used to guide the MPO in selecting the projects that would be most successful in this regard. The MPO's visions include: maintain a state of good repair, focus investments on existing activity centers, improve mobility for people and freight, reduce the level GHG emissions, minimize environmental burdens from transportation facilities on low-income and minority populations, and provide safe transportation for all modes. Projects with components and outcomes that help attain the MPO's goals receive higher scores.

The project evaluation criteria consist of 35 questions across six policy categories. A figure that illustrates the TIP evaluation criteria (on the following page) provides an overview of the policy categories, their point values, and the criteria measures.

The MPO staff requires a functional design report (FDR) to conduct a complete evaluation (see MassDOT's *Project Development and Design Guide* for information about what is included in an FDR). If not enough information is available, a project cannot be fully evaluated across all categories.

The summary of evaluation results for projects being considered for the federal fiscal years (FFYs) 2016– 20 TIP is available in Table A-1, Appendix A. The table contains the total project rating for each project. For more details about the evaluation criteria used to score projects, see Appendix B.

Staff Recommendation (April 2015)

The MPO staff used evaluations and project readiness information to prepare a first-tier list of projects. This is a list of the projects with the highest ratings that could be made ready for advertising within the TIP's time horizon (the next four federal fiscal years). The staff relies on the MassDOT Highway Division to provide information about what year a project would be ready for advertising. In developing its recommendations for the draft TIP, MPO staff strongly considered the first-tier list of projects. The MPO staff also factored in projects that are listed in the LRTP, considered geographic equity to help ensure that the list of projects addresses needs throughout the region, and accounted for costs to comply with the fiscal constraint requirement.

Bridge Program—Project Selection Process

The project selection criteria for the bridge program are based on MassDOT's continuous, ongoing prioritization process. The underlying basis of this prioritization is the condition of the bridges, based largely on information gathered through the Bridge Inspection Management System.

TIP Evaluation Criteria

SUBCATEGORY		CATEGORY		
 Improves substandard pavement Improves substandard signal equipment condition Improves traffic signal operations In a Congestion Management Process–identified area Improves intermodal accommodations/connections to transit Implements ITS strategies other than traffic signal operations 	\rightarrow	System Preservation, Modernization and Efficiency	36	
 Design is consistent with complete streets policies Provides multimodal access to an activity center Reduces auto dependency Serves a targeted development site Provides for development consistent with the goals of MetroFuture Improves the quality of life 		Livability and Economic Benefit	29	
 Existing peak-hour level of service (LOS) Improves an MPO- or state-identified freight movement issue Improves proponent-identified primary mobility issue Improves MPO-identified mobility issue Reduces congestion Improves transit reliability 		Mobility>	25 CJ	Droioot
 Air quality (improves/degrades) CO₂ reduction Is in an EOEEA-certified Green Community Reduces VMT/VHT Improves identified environmental impact 	\rightarrow	Environment and Climate Change	25 C	Doting
 Improves transit for an EJ population Design is consistent with complete streets policies in an EJ area Improves an MPO-identified EJ transportation issue 	\rightarrow	Environmental Justice ——>	10	
 Improves emergency response Improves ability to respond to extreme conditions EPDO/Injury Value Improves proponent-identified primary safety need Improves MPO-identified primary safety issue Improves freight-related safety issue Improves bicycle safety Improves pedestrian safety Improves safety or removes an at-grade railroad crossing 		Safety and Security ──→	29	

Statewide Infrastructure Items—Project Selection Process

The project selection process for the statewide infrastructure items involves coordination between the MassDOT divisions to review and prioritize projects that advance important statewide policy goals for improving mobility, protecting the environment, promoting economic growth, and improving public health and quality of life. Other prioritization factors include project readiness and consistency with MassDOT's GreenDOT sustainability policy, the Bay State Greenway Priority 100, and the Safe Routes to School Program.

Transit–Project Selection Process

The process of selecting transit projects for the TIP draws primarily from the MBTA Capital Investment Program (CIP). The CIP is a rolling five-year plan that outlines the transit system's infrastructure needs and planned investments within that short-range time frame. The MBTA updates the CIP annually. Prioritization of projects for inclusion in the CIP is based on their impacts on the following, as defined in the MBTA's enabling legislation: effectiveness of the commonwealth's transportation system; service quality; the environment, health, and safety; the state of good repair of MBTA infrastructure; and the MBTA's operating costs and debt service.

Projects that receive the highest priority are those with the greatest benefit and the least cost, as prioritized by the following criteria:

- Health and the Environment: To qualify for points in this area, proposed projects must correct an existing deficiency for passengers and/or employees in matters of their health and/or the environment.
- State of Good Repair: This criterion measures the degree to which proposed projects improve the condition of the MBTA's existing infrastructure.
- Cost-Benefit: Projects receive scores based on the number of passengers they benefit, their net operating costs, and the debt service necessary to support their capital costs.
- Operational Impact: This measures the extent to which proposed projects are deemed operationally critical, as well as a project's ability to improve the effectiveness of the commonwealth's transportation network in general.
- Legal Commitments: To qualify for points in this area, projects must contribute to fulfilling a legal obligation of the MBTA, such as the MBTA's Key Station Plan.

The transit element of the TIP also includes the federal-aid programs of the other two transit authorities in the region, the Cape Ann Transportation Authority (CATA) and MetroWest Regional Transit Authority (MWRTA). CATA and MWRTA coordinate with the MassDOT Rail and Transit Division to develop their capital programs.

APPROVING THE TIP

Approval of the Draft TIP for Public Review

The MPO considers the evaluation results, first-tier list of projects, and staff recommendation in prioritizing projects for regional target funding. They also consider public input, regional importance, and other factors in developing the draft TIP. In addition to prioritizing the regional target funding, the MPO reviews statewide infrastructure items, the bridge program, and the capital programs for the MBTA, CATA, and MWRTA, before voting to release a draft TIP for public review.

In early-June 2015, the MPO voted to release the draft FFYs 2016–20 TIP for a 30-day public review and comment period. The MPO invited members of the public, regional and local officials, and other stakeholders in the Boston region to review the proposed program. Several TIP outreach sessions were held during the public comment period to solicit comments on the draft TIP; summaries of these are listed in Appendix F.

Approval of the Draft TIP

After the comment period, the MPO reviewed all of the comments it received and endorsed the FFYs 2016–20 TIP on July 30, 2015. The MPO-endorsed TIP will be incorporated into the State Transportation Improvement Program (STIP) and sent to the Federal Highway Administration and Federal Transit Administration so that the document may be approved by the federal agencies by September 30, 2015 before the start of FFY 2016.

UPDATING THE TIP

The TIP is a dynamic program that is amended and adjusted throughout the year. Administrative modifications and amendments often must be introduced because of changes in project status, project cost, or available revenues.

Consistent with federal guidelines, if a project is valued at \$5 million or less, the threshold for defining an amendment is a change of \$500,000 or more. The threshold for projects valued at greater than \$5 million is 10 percent or more of the project value. Changes that are less than these thresholds may be considered administrative modifications. The MPO acts on administrative modifications, and, although a public review period is not required, one may be provided at the MPO's discretion.

Affected municipalities and constituencies are notified of pending amendments. Legal notices of amendments are placed in the region's major newspaper, in its most widely read minority newspaper and Spanish-language newspaper, and on the MPO's website, www.bostonmpo.org. In addition, a notice of a pending amendment is distributed to the MPO's email contact list, MPOinfo, and, along with the actual amendment, is posted on the MPO's website. These notices include information on the 30day public comment period that precedes MPO action on an amendment. The Regional Transportation Advisory Council is notified and briefed during this period and provides comments to the MPO. Municipal representatives and members of the public may also submit written or oral testimony at the MPO meetings at which amendments are discussed

Because the print version of the TIP is prepared prior to the start of each federal fiscal year, it may not reflect all of the changes to the program and projects that occur during the course of the year. The MPO's website is the best place to find current information about the TIP.

All changes to the draft TIP that have been approved by the MPO, and changes to the endorsed TIP, such as amendments and modifications, that have been approved by the MPO, are available on the TIP webpage on the MPO's website, www.bostonmpo.org. Comments or questions about the draft materials may be submitted directly through

the website, voiced at MPO meetings, or via US mail.

This chapter begins with tables listing, by year, the projects and programs funded in FFYs 2016–20. Following the tables, information on projects and programs funded in the Highway and Transit Programs is presented. Projects funded under the Highway Program are listed by municipality, while programs funded under the Transit Program are listed by transit agency.

HIGHWAY PROGRAM - PROJECT INFORMATION KEY

ID Number: Projects in MassDOT's project-tracking system are given a number; those projects not in the Project-tracking system have no number. Transit projects are identified by regional transit agency.

Municipality(ies): The municipality (or municipalities) in which a project is located.

Project Name: The location or name of the project.

Project Type: The category of the project (e.g., Major Highway, Arterial and Intersection, or Bicycle and Pedestrian).

Air Quality Status: The air quality status of the project in the MPO's regional travel demand model.

CO₂ Impact: The quantified or assumed annual tons of carbon dioxide reduced by the project. See Appendix C for more details on greenhouse gas (GHG) emission monitoring and evaluation.

Evaluation Rating: The number of points scored by the project based on the evaluation criteria, if it has been evaluated.

MPO/CTPS Study: Past UPWP-funded studies or reports conducted within the project area.

LRTP Status: The time band that the project is listed in the Long-Range Transportation Plan, if applicable.

Project Length: The length of the project in miles.

Project Description: The description of the project, if available.

Year: The programming year(s) of the project.

Funding Program: The funding program(s) of the project. See Chapter 2 for more details on funding programs.

Total Funding Programmed: The total funding programmed for the project based on the year of expenditure.

1

Information regarding TIP projects changes periodically. For more information on all projects please visit the Interactive TIP Database at www.bostonmpo.org.

TRANSIT PROGRAM - PROJECT INFORMATION KEY

Transit Agency: Regional transit agency that is the proponent of the project.

Program/Project Name: The description of the program or project.

Air Quality Status: The air quality status of the project in the MPO's regional travel demand model.

CO₂ Impact: The quantified or assumed annual tons of carbon dioxide reduced by the project.

See Appendix C for more details on greenhouse gas (GHG) emission monitoring and evaluation.

Project Description: The description of the program or project, if available.

Year: The programming year(s) of the program or project.

Funding Program: The funding program(s) of the project. See Chapter 2 for more details on funding programs.

Total Funding Programmed: The total funding programmed for the program or project based on the year of expenditure.

701 CMR 7.00 Use of Road Flaggers and Police Details on Public Works Projects / 701 CMR 7.00 (the Regulation) was promulgated and became law on October 3, 2008. Under this Regulation, the CMR is applicable to any Public works Project that is performed within the limits of, or that impact traffic on, any Public Road. The Municipal Limitation referenced in this Regulation is applicable only to projects where the Municipality is the Awarding Authority. For all projects contained in the TIP, the Commonwealth is the Awarding Authority. Therefore, all projects must be considered and implemented in accordance with 701 CMR 7.00, and the Road Flagger and Police Detail Guidelines. By placing a project on the TIP, the Municipality acknowledges that 701 CMR 7.00 is applicable to its project and design and construction will be fully compliant with this Regulation. This information, and additional information relative to guidance and implementation of the Regulation can be found at the following link on the MassDOT Highway Division website: http://www.massdot.state.ma.us/Highway/flaggers/main.aspx

701 CMR 7.00 Use of Road Flaggers and Police Details on Public Works Projects / 701 CMR 7.00 (the Regulation) was promulgated and became law on October 3, 2008. Under this Regulation, the CMR is applicable to any Public works Project that is performed within the limits of, or that impact traffic on, any Public Road. The Municipal Limitation referenced in this Regulation is applicable only to projects where the Municipality is the Awarding Authority. For all projects contained in the TIP, the Commonwealth is the Awarding Authority. Therefore, all projects must be considered and implemented in accordance with 701 CMR 7.00, and the Road Flagger and Police Detail Guidelines. By placing a project on the TIP, the Municipality acknowledges that 701 CMR 7.00 is applicable to its project and design and construction will be fully compliant with this Regulation. This information, and additional information relative to guidance and implementation of the Regulation can be found at the following link on the MassDOT Highway Division website: http://www.massdot.state.ma.us/Highway/flaggers/main.aspx

701 CMR 7.00 Use of Road Flaggers and Police Details on Public Works Projects / 701 CMR 7.00 (the Regulation) was promulgated and became law on October 3, 2008. Under this Regulation, the CMR is applicable to any Public works Project that is performed within the limits of, or that impact traffic on, any Public Road. The Municipal Limitation referenced in this Regulation is applicable only to projects where the Municipality is the Awarding Authority. For all projects contained in the TIP, the Commonwealth is the Awarding Authority. Therefore, all projects must be considered and implemented in accordance with 701 CMR 7.00, and the Road Flagger and Police Detail Guidelines. By placing a project on the TIP, the Municipality acknowledges that 701 CMR 7.00 is applicable to its project and design and construction will be fully compliant with this Regulation. This information, and additional information relative to guidance and implementation of the Regulation can be found at the following link on the MassDOT Highway Division website: http://www.massdot.state.ma.us/Highway/flaggers/main.aspx

701 CMR 7.00 Use of Road Flaggers and Police Details on Public Works Projects / 701 CMR 7.00 (the Regulation) was promulgated and became law on October 3, 2008. Under this Regulation, the CMR is applicable to any Public Road. The Municipal Limitation referenced in this Regulation is applicable only to projects where the Municipality is the Awarding Authority. For all projects contained in the TIP, the Commonwealth is the Awarding Authority. Therefore, all projects must be considered and implemented in accordance with 701 CMR 7.00, and the Road Flagger and Police Detail Guidelines. By placing a project on the TIP, the Municipality acknowledges that 701 CMR 7.00 is applicable to its project and design and construction will be fully compliant with this Regulation. This information, and additional information relative to guidance and implementation of the Regulation can be found at the following link on the MassDOT Highway Division website: http://www.massdot.state.ma.us/Highway/flaggers/main.aspx

701 CMR 7.00 Use of Road Flaggers and Police Details on Public Works Projects / 701 CMR 7.00 (the Regulation) was promulgated and became law on October 3, 2008. Under this Regulation, the CMR is applicable to any Public Road. The Municipal Limitation referenced in this Regulation is applicable only to projects where the Municipality is the Awarding Authority. For all projects contained in the TIP, the Commonwealth is the Awarding Authority. Therefore, all projects must be considered and implemented in accordance with 701 CMR 7.00, and the Road Flagger and Police Detail Guidelines. By placing a project on the TIP, the Municipality acknowledges that 701 CMR 7.00 is applicable to is project and design and construction will be fully compliant with this Regulation. This information, and additional information relative to guidance and implementation of the Regulation can be found at the following link on the MassDOT Highway Division website: http://www.massdot.state.ma.us/Highway/flaggers/main.aspx

Project Name:	Middlesex Turnpike Improvements, from Crosby Drive North to Manning Road (Phase III)
Project Type:	Arterial and Intersection
Air Quality Status:	Model
CO2 Impact:	Model
Evaluation Rating:	86
MPO / CTPS Study:	
LRTP Status:	2016-20
Project Length:	1.96

The proposed roadway improvements begin 800 feet north of the Plank Street/Middlesex Turnpike/Crosby Drive intersection to approximately 900 feet north of Manning Road. On Lexington Road, approximately 550 feet on each approach to the Middlesex Turnpike. On Manning Road, approximately 550 feet on each approach to Middlesex Turnpike. The intersections that will be improved within this section are the Middlesex Turnpike/Oak Park intersection, the Middlesex Turnpike/900 Middlesex Turnpike drive intersection, the Middlesex Turnpike/Lexington Road intersection and the Middlesex Turnpike/Manning Road intersection. The traffic signal improvements at the Middlesex Turnpike/Albion Way intersection will be completed by others, and therefore are included in this scope of work. The proposed work includes two travel lanes in each direction with the addition of turning lanes for safety and signalized intersections, a median and landscaping. Reconstruction of the bridge over the Shawsheen River is included with this project.

Red Line-Blue Line Connector Design
Transit
Exempt
No CO2 Impact
0.43

The proposed Red Line/Blue Line Connector consists of an extension of the MBTA Blue Line under Cambridge Street to the Red Line station at Charles/MGH. As currently envisioned, the project consists of two major components: (1) a new tunnel extending the Blue Line under Cambridge Street from Government Center to Charles Circle and (2) a new underground Blue Line station connected to the existing Charles/MGH Station. The project will also consider whether and how to relocate Bowdoin Station.

The purpose of this projects is to upgrade five (5) traffic control signals and install four (4) new signals (a total of 9 locations). Existing devices are outdated and require additional functionality to meet MUTCD standards. Some traffic signals will include communication cable and field equipment (local controllers, detectors, etc). Certain locations will be connected to the Boston Transportation Department central traffic computer system, which will allow remote monitoring and real time adjustments to timing. Sidewalk ramps will be reconstructed as needed in order to meet current AAB standards. All signals will be retimed based on current traffic volumes. Certain locations require minor geometric changes to improve safety and operations. The locations are Arlington Street at Beacon and Embankment Road; Arlington at Marlborough; Cambridge at Harvard and Franklin; Cambridge at Windom; Pleasant at Savin Hill; Waltham at Washington; Dudley at Shirley; Cummins Highway at Rockdale; and Washington at West Concord.

LRTP Status:	
Project Length:	0.24

The North Washington Street Bridge is a historic structure constructed in 1898. The bridge consists of 10 approach spans and a swing span, which is not operational. The bridge is structurally deficient and is posted for restricted loads. There have been extensive emergency repairs done to the bridge in the past few years. Currently the two center lanes on the swing span are closed due to steel deterioration. The City of Boston proposes to replace the bridge. On the approach spans this replacement will include replacement of the existing granite/concrete bridge piers with reinforced concrete V piers and continuous trapezoidal steel box girders. Proposed deck will provide for increased bicycle and pedestrian accommodations between Kearney Square and Rutherford Ave.

Project Type:	Bridge
Air Quality Status:	Exempt
CO2 Impact:	Assumed Nominal Reduction
Evaluation Rating:	
MPO / CTPS Study:	
LRTP Status:	
Project Length:	0.07

The proposed project will include removing and replacing the existing superstructure. The existing simply supported spans shall be replaced with a continuous superstructure to eliminate joints over the piers. Also widening of the abutment is anticipated to accommodate future widening of Route 3. Crash-tested barriers will replace the existing non-standard barriers.

Project Length:	3.25

This project is the final bridge contract (Bridge V) for the I-95/93 (Route 128) Transportation Improvement Project. The work includes six bridge locations and approximately 3.25 miles of I-95 roadway reconstruction. The roadway work on I-95, from just south of Kendrick Street to just north of Route 9, includes the installation of an additional 12 foot travel lane and 10 foot shoulder in each direction toward the median, along with new collector/distributor roads between Highland Avenue and Kendrick Street. The collector roads will provide safer weaving movements between the interchanges and provide safer traffic movements to and from the adjacent business park. The bridge locations include the following: Kendrick Street over I-95 (Route 128) in Needham; Highland Avenue over I-95 (Route 128) in Needham; Highland Avenue over I-95 (Route 128) in Needham; Ramp K-1 Bridge over CD Road, and I-95 (Route 128) over Route 9 in Wellesley.

The existing structure, two continuous spans, was constructed in 1958. The superstructure consists of 7 rolled steel beams composite with an exposed 8 inch reinforced concrete deck. The substructure consists of two concrete gravity type abutments, gravity type wingwalls, and a reinforced concrete solid wall type pier. From the SI&A, the overall structure length is approximately 139 feet, the maximum span length is 67 feet, the out-to-out deck width is 48.5 feet, the curb-to curb width is 36 feet, and each sidewalk width is 5 feet. The bridge is structurally deficient and functionally obsolete. The new structure (either deck replacement or superstructure replacement) shall be designed using the AASHTO LRFD Bridge Design Specifications, 6th edition with all current interims, and the MassDOT 2013 LRFD Bridge Manual. Upon verification of the adequacy of the existing substructure, the Consultant shall investigate either superstructure replacement with new steel weathering steel stringers composite with a reinforced concrete exposed deck or deck replacement and clean and paint the existing beams. Substructure elements shall be repaired as required, and limited approach roadway reconstruction shall be reviewed and included, as necessary.

The project includes the reconstruction of the concrete sidewalk with vertical granite curb along the west side of Waverly Avenue from Centennial Avenue to the intersection of North Shore Road and Dana Street, reconstruction of concrete sidewalk with vertical granite curb along the south side of Dix Street and the reconstruction of concrete sidewalk with vertical granite curb along the east side of Garfield Avenue from Dix Street to the school driveway. High-visibility crosswalks will be constructed and existing signage will be upgraded where applicable. New crosswalk and stop line pavement markings will be applied where faded. ADA-compliant accessible ramps will be constructed for all perpendicular pedestrian crossings and a traffic signal with countdown pedestrian indicators will be installed at the intersection of Waverly Avenue, North Shore Road, and Dana Street. The existing traffic signal at the intersection of North Shore Road and Dix Street will be removed and finally, MUTCD-compliant warning and regulatory signs will be installed throughout the project. All-way stop control will be considered at the intersections of Garfield Avenue with Blake Street and Dix Street.

The project includes the installation of a traffic signal with vehicle detection at the intersection of Central Street and Lincoln Avenue. Mast arms and traffic signal heads, countdown pedestrian signal indications, and pushbuttons will be installed as part of this project and sidewalks and several wheelchair ramps will be reconstructed to meet ADA/AAB requirements. A new traffic island with a 5-foot sidewalk and grass strip will be constructed across the Tedeschi's Market driveway to provide a refuge area for pedestrians and reduce the pedestrian crossing distance. The traffic flow on Kent Street will be modified to a one-way flow away from Lincoln Street. Pavement mill and overlay will be applied within the project limits. MUTCD-compliant pavement markings and signage will be installed throughout the limits of the project.

CHAPTER FOUR Tracking and Demonstrating Progress Using Performance Measures

OVERVIEW OF PERFORMANCE-BASED PLANNING

Increasingly, over the past two decades, transportation agencies have been applying "performance management"—a strategic approach that uses performance data to support decisions that would help achieve desired outcomes. Performance management is credited with improving project and program delivery, informing investment decision making, focusing staff on leadership priorities, and providing greater transparency and accountability to the public.

Performance-based planning and programming (PBPP) refers to transportation agencies' application of performance management in their planning and programming processes to achieve desired performance outcomes for the multimodal transportation system. For MPOs, this includes a range of activities and products undertaken by a transportation agency together with other agencies, stakeholders, and the public as part of the 3C Metropolitan Transportation Planning Process. This includes developing:

• long-range transportation plans (LRTPs)

- other plans and processes (including those that are federally required, such as Strategic Highway Safety Plans, Asset Management Plans, the Congestion Management Process, Transit Agency Asset Management Plans, and Transit Agency Safety Plans, as well as others that are not required)
- programming documents, including State and metropolitan Transportation Improvement Programs (STIPs and TIPs)

The goal of PBPP is to ensure that transportation investment decisions—both long-term planning and short-term programming—are based on their ability to meet established goals.

The cornerstone of *Moving Ahead for Progress in the 21st Century's* (MAP-21) highway program transformation is this movement to performance- and outcome-based results. States will invest resources in projects to achieve individual state targets that collectively will make progress toward national goals.

MAP-21 establishes national performance goals for federal highway programs:

1

- **Safety**—Achieve significant reduction in traffic fatalities and serious injuries on all public roads
- Infrastructure condition—Maintain the highway infrastructure asset system in a state of good repair
- **Congestion reduction**—Achieve significant reduction in congestion on the National Highway System (NHS)
- **System reliability**—Improve efficiency of surface transportation system
- Freight movement and economic vitality— Improve national freight network, strengthen ability of rural communities to access national and international trade markets, support regional economic development
- Environmental sustainability—Enhance performance of transportation system while protecting/enhancing the natural environment
- Reduced project delivery delays—Reduce project costs, promote jobs and the economy, expedite movement of people and goods by accelerating project completion; eliminate delays in project development/delivery process, including reducing regulatory burdens and improving agencies' work practices

REQUIREMENTS OF PERFORMANCE-BASED PLANNING

The US Secretary of Transportation, in consultation with states, MPOs, and other stakeholders, have

established performance measures for fatalities and serious injuries to fulfill the Highway Safety Improvement Program; proposed performance measures for pavement conditions for the Interstate and National Highway System (NHS), bridge conditions, and general performance of the Interstate and NHS; and drafted performance measures to assess traffic congestion and on-road mobile source emissions. States and MPOs will set performance targets to support these measures; and state and metropolitan plans will describe how program and project selection would help to achieve the targets.

STATUS OF PERFORMANCE-BASED PLANNING

The Boston Region MPO's transition to performancebased planning is underway in anticipation of MAP-21 performance-measure requirements. The MPO has:

- established goals and objectives that align with national goals (indicated in Table 4-1)
- developed performance measures
- analyzed some performance-measure trends over time to identify priorities and prioritize investments that advance goals and objectives

TABLE 4-1 NATIONAL AND MPO PERFORMANCE GOALS

National Goal	Proposed MPO Goal
Safety	Safety
Infrastructure Condition, System Reliability	System Preservation
Congestion Reduction	Capacity Management/Mobility
Environmental Sustainability	Clean Air/Clean Communities
Freight Movement/ Economic Vitality	Economic Vitality

The following sections of this chapter track performance measures and demonstrate how transportation investments for the next five years would advance the MPO's goals and objectives.

TRACKING PERFORMANCE MEASURES AND DEMONSTRATING PROGRESS TOWARD GOALS AND OBJECTIVES

Safety–Tracking Performance Measures

Safety for all transportation modes continues to be a top priority for the MPO. The MPO goals commit to investing in projects and programs that reduce the severity of crashes and improve safety for all modes.

The MPO tracks traffic fatalities and serious injuries in the Boston region to examine past trends, identify regional safety issues, and set future targets for preferred performance. Tracking these measures help gauge the effectiveness of MPO transportation investments on reducing fatalities and serious injuries.

Overall, safety is improving in the region. Between 2006 and 2012, traffic fatalities (based on a rolling five-year average) decreased from 145 fatalities in 2006 to 129 in 2012. Figure 4-1 shows the change in traffic fatalities by mode during this time period and indicates that the 11 percent decline in fatalities included fewer automobile, truck, pedestrian, and bicycle fatalities. Similarly, total traffic crashes and injuries declined by 21 percent and 27 percent, respectively between 2006 and 2012.

Sources: MassDOT, National Highway Traffic Safety Administration Fatality Reporting System, and the MassDOT Crash Data System.

Despite these overall gains, crashes and injuries for pedestrians and bicyclists rose during this same period, as shown in Figure 4-2. Between 2006 and 2012, roughly two-thirds of pedestrian and bicycle crashes resulted in an injury. For pedestrians, the number of crashes increased by 18 percent and injuries grew by 31 percent. For bicycles, the number of crashes increased by 36 percent and injuries jumped by 46 percent. In addition, there are still a number of high-crash locations throughout the Boston MPO region, including nearly 80 of the Top-200 Crash Locations statewide.

FIGURE 4-2 Traffic Injuries in the Boston Region by Mode, 2006-12

Sources: MassDOT, National Highway Traffic Safety Administration Fatality Reporting System, and the MassDOT Crash Data System.

In prioritizing its capital investments, the MPO uses TIP project-evaluation criteria to support the goal of improving safety for all modes. These criteria identify projects with great safety needs and assess whether proposed improvements address those needs. Projects with higher scores in the safety-evaluation criteria tend to address high-crash locations and be most effective at providing safety for all modes.

Safety–Demonstrating Progress Using Performance Measures

The projects programmed in the FFYs 2016–20 TIP Target Program propose safety improvements at 35 high-crash locations, and multiple truck, bicycle, and pedestrian high-crash locations to reduce fatalities and serious injuries in the region.

Intersection Improvements

The FFYs 2016–20 TIP Target Program proposes three projects at 12 intersection locations. These intersection investments will provide safety improvements for automobiles, trucks, bicyclists, and pedestrians by implementing safety countermeasures at two high crash locations: Derby Street, Whiting Street (Route 53) and Gardner Street in Hingham and Middle Street, Libbey Industrial Parkway and Tara Drive in Weymouth.

Major Infrastructure

The TIP Target Program proposes eight major infrastructure projects that would implement safety improvements at 19 high-crash locations, including seven truck high-crash locations. The Route 128 Add-a-Lane project will widen 3.25 miles of I-95 in Needham and Wellesley to install an additional 12-foot travel lane and 10-foot shoulder in each direction will address serious safety issues. The addition of a fourth full-time travel lane will eliminate the usage of the breakdown lane during the peak periods and adding collector roads between Highland Avenue and Kendrick Streets will provide safer weaving movements between the interchanges.

Complete Streets

The FFYs 2016–20 TIP Target Program proposes nine Complete Streets projects along corridors across the region. These corridor investments will provide safety improvements for automobiles, trucks, bicyclists, and pedestrians. Nine of the 13 Complete Streets projects would improve safety at one or more high-crash locations. In addition, improvements at these 13 corridors would provide safe and continuous accommodations for non-motorized users by adding 24 miles of new bicycle facilities and more than six miles of new sidewalk. For example, reconstructing Massachusetts Avenue in Lexington will add new bicycle lanes throughout this 0.7-mile section of the corridor, enhancing safe access to the Minuteman Commuter Bikeway. The Gateway East project along Route 9 in Brookline will provide added safety for bicyclists by implementing cycle tracks that physically separate the bicycle lane from the travel lane to reduce conflicts between motorists and bicyclists.

System Preservation—Tracking Performance Measures

System preservation is a priority for the MPO because the transportation infrastructure in the region is aging. The demands placed on highway and transit facilities have been taxing to the point that routine maintenance is insufficient to keep up with the need. As a result, there is a significant backlog of maintenance and state-of-good repair work to be done on the highway and transit system, including bridges, roadway pavement, transit rolling stock, and traffic and transit control equipment.

MassDOT's program monitors approximately 4,150 lane miles of interstate, arterial, and access-controlled arterial roadways in the Boston Region MPO area. It has been the policy of the MPO not to fund resurfacing-only projects in the TIP. However, the MPO does make funding decisions for roadway reconstruction projects that include resurfacing, usually deep reconstruction, in addition to other design elements.

An analysis of the pavement on MassDOT-maintained roadways in the Boston Region MPO area indicates that pavement condition has remained fairly constant between 2009 and 2013. Figure 4-3 displays the number of lane miles in good or better condition in the Boston Region MPO by roadway classification between 2009 and 2013. Figure 4-3 indicates that the lane miles of interstates, access-controlled arterials, and arterials in good or better condition has remained constant since 2009.

FIGURE 4-3

Source: MassDO1 Pavement Management Program.

Approximately 70 percent of roadway lane miles are in good condition, 25 percent in fair condition, and five percent in poor condition—, which meets MassDOT's performance, measure of at least 65 percent of the pavement in good condition. However, MassDOTmaintained arterial roadways continue to account for a disproportionate share of substandard roadway lane miles. Arterials accounted for 62 percent of the monitored roadways, but nearly 90 percent of the roadways that are in substandard condition (see Figure 4-4).

[■]Poor ■Fair ■Good

Source: MassDOT Pavement Management Program.

MassDOT also monitors the condition of its bridges across the state. There are 2,866 bridges located within the Boston Region MPO area. Of those bridges, some are in substandard condition because they have been deemed by MassDOT bridge inspectors as structurally deficient, functionally obsolete, or posted.

Figure 4-5 displays the number of substandard bridges in the Boston Region MPO by condition between 2007 and 2014. Figure 4-5 indicates that between 2007 and 2014, the percentage of structurally deficient bridges decreased slightly from six to five percent, functionally obsolete bridges remained constant at 19 percent, and posted bridges declined from seven to four percent.

FIGURE 4-5 Number of Substandard Bridges in the Boston Region MPO by Condition

Source: MassDO1 Bridge Inventory.

In prioritizing its capital investments, the MPO uses TIP project-evaluation criteria to assess how well each project improves pavement and signal condition to advance the MPO's goal of maintaining a state of good repair.

System Preservation—Demonstrating Progress Using Performance Measures

Virtually all TIP Target Program investments advance the MPO's system preservation goal to maintain the transportation system by improving pavement condition, or sidewalk infrastructure, or by prioritizing projects that improve emergency response or ability to respond to extreme conditions. In addition, the Target Program investments contribute modestly to bridge preservation by addressing 11 substandard bridges. Yet, the MassDOT Bridge Program remains the primary funding source for replacement or rehabilitation of substandard bridges,

The FFYs 2016–20 TIP Target Program investments propose to improve 67 miles of substandard pavement, 43 miles of sidewalk infrastructure, and 11 substandard bridges (10 functionally obsolete and one structurally deficient). In addition, there are 14 projects that will improve emergency response or ability to respond to extreme conditions, thus aiming to make significant progress toward maintaining the region's transportation system.

Intersection Improvements

The FFYs 2016-20 TIP Target Program proposes to improve substandard pavement at multiple intersections and modernizes signal equipment at 12 intersections. These investments will also improve emergency response by updating intersections along an evacuation route and in close proximity to emergency support locations.

Complete Streets

The FFYs 2016–20 TIP Target Program proposes to resurface or reconstruct more than 30 miles of substandard pavement, more than 20 miles of sidewalk infrastructure, and one substandard bridge on arterial roadways. In addition, there are eight projects that will improve emergency response or ability to respond to extreme conditions, thus aiming to make significant progress toward maintaining the region's transportation system.

The reconstruction of Ferry Street in Everett will resurface more than three miles of substandard

pavement while bringing traffic signals, street lighting, signs and pavement markings into a state of good repair.

Major Infrastructure

The FFYs 2016–20 TIP Target Program proposes to resurface or reconstruct 30 miles of substandard pavement, more than 20 miles of sidewalk infrastructure, and 10 substandard bridges. In addition, there are four projects that will improve emergency response or ability to respond to extreme conditions, thus aiming to make significant progress toward maintaining the region's transportation system.

In addition, the reconstruction of Highland Avenue and Needham Street in Newton and Needham will resurface nine miles of substandard pavement, six miles of sidewalk infrastructure, and one substandard bridge, while bringing traffic signals, street lighting, signs, and pavement markings into a state of good repair.

The Route 128 Add-a-Lane project will replace one structurally deficient and three functionally obsolete bridges as part of the widening of I-95 in Needham and Wellesley.

Capacity Management/Mobility—Tracking Performance Measures

Through its capacity management and mobility goal and objectives, the MPO seeks to maximize the region's existing transportation system so that both people and goods can move reliably and connect to key destinations. The Boston region is mature, which creates challenges to making major infrastructure changes to its transportation system.

In order to determine how well the region's roadways are performing, the MPO applies performance measures that gauge the duration, extent, intensity, and reliability of congestion. MPO staff analyzed congestion in the region using the CMP Express Highway and Arterial Performance Dashboards to establish a baseline for future comparison. Figure 4-6 displays the percentage of lane miles of congestion as measured by travel time index on the CMP expressway network. In the Boston Region MPO area, 22 percent of all expressway lane miles in the AM peak period and 20 percent of all expressway lane miles in PM peak period experience moderateto-severe congestion.

The measure of lane miles of congestion was significantly less for the arterial network. Figure 4-7 displays the percentage of lane miles of congestion as measured by travel time index on the CMP arterial network. For the arterial network, only seven percent of arterials in the AM peak period and four percent of arterials in the PM peak period experience moderate to severe congestion.

FIGURE 4-6 Lane Miles of Congestion in the Boston Region MPO: CMP Monitored Expressways

Source: Boston Region MPO Congestion Management Process.

Moving forward, the MPO will continue to monitor congestion data of the roadway network to track performance of the system. This annual analysis will depend on routinely updated data sources, which may require the purchase of INRIX data or other comparable data.

In prioritizing its capital investments, the MPO uses TIP project-evaluation criteria to assess how well each project expands transportation options to advance the MPO's goal of managing capacity and improving mobility.

Source: Boston Region MPO Congestion Management Process.

Capacity Management/Mobility– Demonstrating Progress Using Performance Measures

The MPO seeks to manage capacity on the transportation and improve mobility for its users by extending transit service to support non-SOV travel options, adding roadway capacity at select MPO-identified bottleneck locations, and implementing traffic and operational improvements along congested corridors.

Complete Streets

The FFYs 2016–20 TIP Target Program proposes to add 24 miles of bicycle lanes (including almost a mile of cycle tracks), more than six miles of new sidewalk infrastructure, and improve access to transit along 10 corridors. These investments also would improve corridors that serve 18 bus routes, operating nearly 1,000 bus trips on a typical weekday. For example, the reconstruction of Route 126 (Pond Street) in Ashland will transform the corridor by adding sidewalks and bicycle lanes where no facilities currently exist. These improvements for bicyclists and pedestrians will provide the necessary facilities to support existing MWRTA bus services in the corridor.

Major Infrastructure

The FFYs 2016-20 TIP Target Program proposes to add 24 miles of bicycle lanes, more than three miles of sidewalk infrastructure, and improve access to transit along five corridors. These investments also would improve corridors that serve multiple bus routes, operating more than 300 bus trips on a typical weekday.

Middlesex Turnpike Improvements (Phase III) in Bedford, Billerica, and Burlington will continue improvements to the corridor by adding three miles of sidewalks and bicycle lanes where no facilities currently exist. These improvements will support new LRTA bus service along the Middlesex Turnpike.

Reconstruction of Route 18 (Main Street) in Weymouth will improve one moderate MPO-identified arterial bottleneck location by widening a four-mile section of the corridor from two to four lanes. In addition, the project will expand transportation options by adding eight miles of bicycle lanes.

The Route 128 Add-a-Lane project will improve one severe MPO-identified express highway bottleneck location by widening 3.25 miles of I-95 in Needham and Wellesley.

Economic Vitality—Tracking Performance Measures

Through its economic vitality goal, the MPO seeks to ensure that the transportation network provides a strong foundation for an economically vibrant region.

One of MetroFuture's implementation strategies is to focus on economic growth, and coordinate transportation investments to guide economic growth in the region. MAPC worked with EOHED and the EOEEA to develop a process to identify local, regional, and state-level priority development and preservation areas in municipalities within the MPO area. MAPC staff worked with municipalities and state partners to identify locations throughout the region that are principal supporters of additional housing, employment growth, creation and preservation of open space, and the infrastructure improvements required to support these outcomes for each location.

This process identified locations that are best suited to support the type of continued economic vitality and future growth that the market demands, and which communities desire. Identifying these key growth and preservation locations also helps MAPC, the Boston Region MPO, and state agencies to understand both the infrastructure and technical assistance needs better, in order to help them prioritize the limited regional and state funding.

The MPO has not yet established performance measures to track the coordination of land-use development and transportation investments; however, the MPO uses TIP project-evaluation criteria to assess how well each project advances MetroFuture land-use planning. This means supporting investments in already-developed locations of residential or commercial/industrial activity, locations with adequate sewer and water infrastructure, areas identified for economic development by state, regional, and local planning, and areas with a relatively high density of development.

Economic Vitality—Demonstrating Progress Using Performance Measures

The MPO's transportation investments advance economic vitality by prioritizing projects that support access to targeted development areas for multiple modes.

Complete Streets

The FFYs 2016–20 TIP Target Program proposes nine projects that provide multimodal access to targeted development areas that are well suited to support continued economic vitality and future growth. For example, reconstruction of Route 85 (Maple Street) will provide access to a 43D site located at the former Lucent site in Marlborough and reconstruction of Route 27 (North Main Street) will provide access to a 40R site located at the former Paperboard site at 182 North Main Street in Natick.

Major Infrastructure

The FFYs 2016-20 TIP Target Program proposes five projects that provide multimodal access to a targeted development areas well suited to support continued economic vitality and future growth.

The reconstruction of Rutherford Avenue in Boston, Route 18 (Main Street) in Weymouth, and Highland Avenue and Needham Street in Newton and Needham will expand transportation options and enhance access to transit to support future growth and facilitate new development.

Next Steps in Advancing Performance Measures

Performance-based planning is an ongoing process and will continue to evolve as the MPO monitors and evaluates its progress using performance measures. The MPO will advance performance-based planning through its core planning documents by:

- continuing scenario planning to explore how various transportation investments support goals through the LRTP
- considering performance-based planning needs and issues when deciding what activities to fund through the UPWP
- tracking annual progress toward goals and objectives through the TIP

In FFY 2016, the MPO will continue to monitor system-level trends and propose performance targets to guide investment decisions. If, in its annual monitoring, the MPO sees it is not making progress toward its targets, then the organization would need to consider modifying investment or policy priorities, and weigh the tradeoffs involved. For example, allocating a greater share of funding to intersection improvements at high-crash locations may make significant progress toward reducing traffic fatalities and serious injuries; however, it also may impact the MPO's ability to meet system-preservation targets for pavement or bridge conditions. By continuously monitoring and evaluating its progress, the MPO will be able to make these difficult decisions across competing goals and objectives in a more informed manner, resulting in greater outcomes for all concerned.

BACKGROUND

The Commonwealth of Massachusetts is classified as unclassifiable/attainment for the ozone standard with the exception of Dukes County. Therefore, the Boston Region MPO does not have to perform a conformity determination for ozone for its Long-Range Transportation Plan or Transportation Improvement Program.

The Boston area carbon monoxide (CO) maintenance area¹, however, must maintain reduced emission levels of CO. With this maintenance classification, the 1990 Clean Air Act Amendments (CAAA) require the Boston Region MPO to conduct an air quality conformity analysis for the nine communities, as they have a carbon monoxide maintenance plan approved and included in the State Implementation Plan (SIP).

In April 2002, Waltham was redesignated as in attainment for carbon monoxide with a United States Environmental Protection Agency (EPA)-approved limited maintenance plan (see the Boston Region MPO's *Charting Progress to 2040* LRTP for more details). The Boston Region MPO certifies that no activity outlined in its LRTP and TIP will:

- Cause or contribute to any new violation of any standard in any area
- Increase the frequency or severity of any existing violation of any standard in any area
- Delay the timely attainment of any standard or any required interim emission reductions or other milestones in any area

Key elements of this FFYs 2016–2020 TIP related to air quality conformity are as follows:

- This TIP is financially constrained, and all projects in the TIP come from the conforming LRTP of the Boston Region MPO, *Charting Progress to 2040*.
- All regionally significant projects included in the TIP have been included in the air quality analysis for the conforming LRTP. These projects are of the same design and concept as presented in the LRTP.
- Because projects in the TIP come from the conforming LRTP, and all regionally significant LRTP projects for 2016 through 2020, (both Federal and Non-Federal Aid) are programmed

¹ The Boston area carbon monoxide maintenance area includes Boston, Cambridge, Chelsea, Everett, Malden, Medford, Quincy, Revere, and Somerville.

in the TIP, the same air quality analysis used for the LRTP can be used for the TIP.

• Therefore, this TIP demonstrates air quality conformity.

Timely Implementation of Transportation Control Measures

Transportation control measures (TCMs) were required in the SIP in revisions submitted to the EPA in 1979 and 1982 and in those submitted as part of the Central Artery/Tunnel (CA/T) project. The TCMs included in the 1979 and 1982 submissions were accomplished through construction or implementation of ongoing programs.

The TCMs submitted as part of the CA/T project mitigation have been included in the conformity of the LRTP as recommended or completed projects with the exception of the following three projects:

- Completion of a final design of the Red Line-Blue Line Connector from the Blue Line at Government Center to the Red Line at Charles Station
- Fairmount Line Improvements
- Enhanced Green Line Extension (GLX) beyond Lechmere Station to Medford Hillside and Union Square

MassDOT worked with the Massachusetts Department of Environmental Protection (DEP) to address these projects and continues to keep the Boston Region MPO informed of their status through monthly reports at the MPO's regularly scheduled meetings. The Boston Region MPO will continue to include these projects in the LRTP and TIP until the process has been completed, assuming that any interim projects or programs will provide equal or better emissions benefits. When the process has been completed, the MPO will amend the LRTP and future TIPs and their conformity determinations to include any changes (including any interim projects or programs).

A Status Report of the Uncompleted SIP Projects

The status of these projects has been updated using the SIP Transit Commitments Status Report, which was submitted by MassDOT to DEP in May 2015. Highlights of the report are presented below. For a detailed description of the status of these projects, please visit MassDOT's website at the following link: https://www.massdot.state.ma.us/planning/Main/Plan ningProcess/StateImplementationPlan/SIPTransitCo mmitmentSubmissions.aspx.

Red Line-Blue Line Connector - Final Design - SIP Required Completion by December 2011

Project Status

MassDOT initiated a process to amend the SIP to permanently and completely remove the obligation to perform final design of the Red Line-Blue Line Connector. To that end, MassDOT officially sought approval from DEP to support a SIP amendment process. MassDOT is not proposing to substitute any new projects in place of the Red Line-Blue Line Connector commitment, given the absence of any airquality benefits associated with the current Red LineBlue Line commitment (final design only). Correspondence from MassDOT to the DEP formally initiating the amendment process was submitted on July 27, 2011, and is posted on the MassDOT website.

On September 13, 2012, the DEP held two hearings (at 1:00 PM and 5:00 PM) to take public comment on MassDOT's proposed amendments to 310 CMR 7.36, Transit System Improvements, including eliminating the requirement to complete final design of the Red Line-Blue Line Connector. Between the two hearings, there were 16 attendees, 10 of whom gave oral testimony. All those who spoke at the hearings were in favor of the DEP not removing the commitment. The DEP accepted written testimony until September 24, 2012.

On August 23, 2013, the EPA sent a letter to FHWA providing an update on Massachusetts Air Quality Conformity. In that letter, the EPA noted that the Red Line-Blue Line Connector Design project had not met the completion date on December 2011, but that MassDOT was not obligated to implement interim emission-reduction projects because no emission reductions are associated with the design project.

On October 8, 2013, the DEP approved a request made by MassDOT in July 2011 to revise 310 CMR 7.36 to remove the requirement for MassDOT to complete the design of the Red Line-Blue Line Connector. This revision to the State Implementation Plan must now also be approved by EPA. The text of the revision is available on the MassDOT website at: http://www.massdot.state.ma.us/Portals/17/docs/sip/O ctober13UpdatedSIPReg.pdf. On December 1, 2014, the EPA published a proposed rule to approve a SIP revision submitted by the Commonwealth of Massachusetts in the Federal Register on November 6, 2013. This proposal, if finalized, would remove the design of the Red Line-Blue Line Connector as a requirement in the SIP.

Funding Source

MassDOT is proposing to nullify this commitment

Fairmount Line Improvements Project - SIP Required Completion by December 2011

Project Status

The Four Corners and NewMarket Stations opened for service on July 1, 2013. One remaining claim must be processed for the Four Corners station and then the contract will be closed out. Final closeout is expected in July 2015. The Talbot Avenue Station opened in November 2012.

A station at Blue Hill Avenue has been the subject of significant community controversy during the past-five years. The redesign of the station is now moving forward, and is 60 percent complete. The 90 percent design plans are expected in July 2015 and 100 percent plans in September 2015. Construction is scheduled to begin in spring 2016, and the station to open in summer 2018.

MassDOT and the MBTA prepared a Petition to Delay and an Interim Emission Offset Plan to be implemented for the duration of the delay of the Fairmount Line Improvements project. MassDOT estimated the reduced emissions that are expected to be generated by implementing the new Fairmount Line station and, with input from Fairmount Line stakeholders, proposed offset measures. MassDOT estimated that the potential offset measures would meet emissions-reduction targets. The measures include shuttle bus service from Andrew Square to Boston Medical Center and increased service on bus Route 31, which serves Dorchester and Mattapan. These measures were implemented on January 2, 2012, and currently are in place.

Green Line Extension to Somerville and Medford Project – SIP Required Completion by December 2014

Project Status

State-level environmental review (Massachusetts Environmental Policy Act (MEPA)) was completed in July 2010. Federal-level environmental review (National Environmental Policy Act (NEPA) documents were submitted to the Federal Transit Administration in September 2011, and a public hearing was held on October 20, 2011. A Finding of No Significant Impact (FONSI) was issued by the Federal Transit Administration (FTA) on July 9, 2012.

On January 5, 2015, the US Secretary of Transportation and the MBTA signed the Full Funding Grant Agreement (FFGA) for the Green Line Extension project, approving \$996,121,000 of FTA New Starts funding to support design and construction of the project. The execution of the FFGA was the result of many years of planning, design and pre-construction efforts by MassDOT and the MBTA, in collaboration with the FTA and its Project Management Oversight Consultant. The federal funding is scheduled to be paid between FFY 2015 and FFY 2022. As noted in the current MassDOT Capital Investment Plan (released January 2014), MassDOT and the MBTA will use Commonwealth funds in addition to federal funding to support the design and construction activities.

To tailor the project-delivery method to best mitigate the larger project risks, MassDOT and MBTA are implementing a four-phased project-delivery plan:

Phase 1 is using the traditional design-bid-build approach to deliver the contract for widening the Harvard Street and Medford Street railroad bridges and demolishing the 21 Water Street building. The contract award occurred in December 2012, and the Notice to Proceed was issued on January 31, 2013.

The MBTA has also added some retaining wall construction to the Phase 1 contract that had previously been programmed for Phase 4 in that area. By constructing this work under the Phase 1 contract, this retaining/noise wall should be completed in time to better support and facilitate track relocation as part of the construction of Phase 4. The addition of this work has extended the end date of the Phase 1 contract by six months to October 2015, and as of this writing, the contractor is on track to complete it by then.

In Medford at Harvard Street, the new T2 track installation is almost complete and the track throw to

the new T2 bridge alignment was competed on May 10, 2015. Road closure and demolition of the old T2 bridge structure was scheduled for the weekend of May 16 and 17. Once this demolition is complete, abutment modifications will commence for installation of the new Green Line outbound and inbound bridges. Noise barrier column and panel installation above the new cast-in-place retaining wall south of Winchester Court is also anticipated to begin in summer 2015.

Phase 2/2A will extend service from the (new) Lechmere Station to the Washington Street and Union Square Stations and relocate the bus facility and vehicle storage at Lechmere Station. The projected completion date for Phase 2/2A initial Green Line service is likely mid-2018.

Phase 3 will construct the vehicle-maintenance facility and storage facility. As the full yard and maintenance facility are not needed to support the initial passenger service to Washington Street and Union Square, this phase has been scheduled for completion approximately six months ahead of the date for revenue service to College Avenue.

Phase 4 will provide service from Washington Street Station (completed as part of Phase 2, above) to College Avenue Station, which was targeted to be completed in June 2020, roughly a year ahead of the FFGA completion date. Although enabling construction is already underway in this segment, the design of this package is being revised to incorporate value engineering scope changes. This reworking will extend the period to complete the 100% final design for pricing and may extend the bidding and award into early 2016, as opposed to the planned November 2015 Notice to Proceed (NTP) date.

New Green Line Vehicles: The MBTA Vehicle Procurement contract to purchase 24 Type 9 Vehicles was awarded to CAF USA Inc. in the amount not to exceed \$118,159,822 at the MassDOT Board Meeting held on May 14, 2014. The NTP for this contract was issued on September 4, 2014.

CAF is in the process of developing drawing packages for the Preliminary Design, and the MBTA Project Team and the Contractor CAF continue to hold technical working sessions and project meetings. In addition, weekly project management meetings are held between MBTA and CAF to discuss project status, short-term schedules and priorities as well as monthly project status meetings where all project issues, schedules, deliverables and milestones are reviewed and discussed.

The first vehicle is to be delivered no later than 36 months from NTP. The pilot car delivery is scheduled for September 2017. The pilot car will receive comprehensive testing for six months followed by delivery of the remaining 22 vehicles, with the last car to be delivered by July 2018. All vehicles are expected to be in service in early 2019.

Somerville Community Path: Originally the Green Line Extension project included just the design of the extension of the Somerville Community Path from south of Lowell Street to the Inner Belt area of Somerville. In May 2014, MassDOT and the City of Somerville announced an agreement to add construction of the Community Path, including a connection to the Cambridge/Northpoint area, to the scope of the program. The Path Extension is not part of the SIP commitment.

Potential Challenges

MassDOT has met the first four interim milestones associated with the Green Line Extension project: 1) filing an Expanded Environmental Notification Form, 2) procuring multiple design consultants, 3) publishing Draft Environmental Impact Report, and 4) publishing Final Environmental Impact Report. The project has transitioned from planning and environmental review phases to design, engineering, and construction.

In the 2011 SIP Status Report, MassDOT reported that the Green Line Extension project would not meet the legal deadline of December 31, 2014. At that time, MassDOT projected a period for introducing passenger service on the Green Line Extension. The points within the period are associated with different probabilities, as shown below:

- 10% Probability of Not Exceeding Autumn 2018
- 90% Probability of Not Exceeding Summer 2020

FTA's projected completion date is June 2021, which includes one year of schedule contingency beyond the MBTA's target date. Presently, the Green Line Extension team anticipates that the completion date of Phase 4 will be extended from June 2020 to late summer/early fall 2020.

MassDOT and the MBTA continue to seek measures to accelerate the project timeline wherever possible.

The receipt of the FFGA was a key milestone, as it allowed completion of the bidding process and the start of construction for the bulk of the Phase 2/2A and Phase 4 work.

Although the goal of the phased project delivery approach is to complete components in an incremental way, the timeline for overall project completion listed above represents a substantial delay beyond the current SIP deadline of December 31, 2014. Consequently, this schedule triggers the need to provide interim emission reduction offset projects and measures for the period of the delay (beginning January 1, 2015). Working with the Central Transportation Planning Staff, MassDOT and the MBTA calculated the reductions of volatile organic compounds, CO, and nitrogen oxides-reductions equal to or greater than the reductions projected for the Green Line Extension itself, as specified in the SIP regulation—that will be required for the period of the delay.

In June 2012, MassDOT released a list of potential mitigation ideas received from the public that could be used as offset measures. In summer and fall of 2012, MassDOT solicited public comments on these potential measures. The MBTA created an internal working group to determine a final portfolio of interim mitigation measures to implement by December 31, 2014, the legal deadline for the implementation of the Green Line Extension.

This work resulted in a recommendation to implement the following three interim mitigation measures, which collectively would meet the emissions reduction target for the project:

- Additional off-peak service along existing routes serving the GLX corridor, including the Green Line, and bus routes 80, 88, 91, 94 and 96
- Purchase of 142 new hybrid electric vehicles for THE RIDE
- Additional park-and-ride spaces at the Salem and Beverly intermodal facilities

The Petition to Delay, submitted to DEP on July 22, 2014, which expands further on the analysis and determination of the interim offset measures, is available on MassDOT's website. These measures went into effect in the beginning of 2015.

The Commonwealth

Russia Wharf Ferry Terminal

Project Status

Former MassDOT Secretary of Transportation, Richard Davey, approved construction of the permitted ferry facility and a \$460,000 ferry-service startup subsidy in October 2012. The 2005 facility plans and specifications were revised to meet the latest MassDOT Highway Division standards. The bid package was issued in fall 2013. A contractor was selected and the Notice to Proceed was issued in April 2014. Pre-construction activities progressed, but contractual issues have led MassDOT to decide to rebid the contract and complete the facility in 2015. There is no regularly scheduled passenger water transportation service in this area, nor are there any plans to provide such a service. The City of Boston, however, is undertaking design and engineering work to address the Old Northern Avenue Bridge's vesselclearance constraint, and is purchasing two ferry vessels for Inner Harbor use, which could include this ferry terminal as a destination.

<u>Funding Source</u> The Commonwealth

AIR QUALITY CONFORMITY ANALYSIS

The primary conformity test is to show consistency with emissions budgets set forth in the SIP. Specific information regarding analysis methods, latest planning assumptions, and consultation procedures are detailed in the LRTP, *Charting Progress to 2040*.

A list of all of the regionally significant projects from the Boston Region MPO included in the air quality conformity determination for this TIP is shown in Tables 5-1 and 5-2.

TABLE 5-1 Regionally Significant Projects Included in the Regional Transportation Models for the Boston Region MPO Projects under Construction

Analysis Year	Community	Project Descriptions
2020	Needham and Wellesley	Route 128 Additional Lanes

TABLE 5-2 Regionally Significant Projects Included in the Regional Transportation Models for the Boston Region MPO Recommended LRTP and TIP Projects

Analysis Year	Community	Project Descriptions
2020	Bedford and Billerica	Middlesex Turnpike Improvements, Phase 3 – from Crosby Drive north to Manning Road
2020	Newton and Needham	Reconstruction of Highland Avenue, Needham Street and Charles River Bridge, from Webster Street to Route 9
2020	Somerville and Medford	Green Line Extension Project (Phase 2) from College Avenue to Mystic Valley Parkway/Route 16
2020	Weymouth and Abington	Reconstruction and Widening of Route 18 (Main Street) From Highland Place to Route 139
2020	Woburn	Reconstruction of Montvale Avenue from I-93 to Central Street
2020	Woburn	Bridge Replacement, New Boston Street Bridge over MBTA Tracks
2020	Boston	Reconstruction of Rutherford Avenue, from City Square to Sullivan Square
2030	Framingham	Intersection Improvements at Route 126 and Route 135/MBTA and CSX Railroad
2030	Lexington	Route 4/225 (Bedford Street) and Hartwell Avenue
2030	Natick	Bridge Replacement, Route 27 (North Main Street) over Route 9 (Worcester Street) and Interchange Improvements
2030	Somerville	McGrath Boulevard Project

The primary test for showing conformity with the SIP is to demonstrate that the air-quality conformity of this TIP is consistent with the emission budget set forth in the SIP. The CO mobile-source attainment inventory for 1993, for the nine cities in the Boston maintenance area, reclassified being in attainment as 305.43 tons per winter day. The projection of mobile sources for the Boston maintenance area is 228.33 tons per winter day for 2010. Estimates of CO emissions for the Boston maintenance area for various years are shown in Table 5-3. The CO emissions are less than the CO emission budget.

TABLE 5-3 Winter CO Emissions Estimates for the CO Maintenance Area for the Nine Cities in the Boston Area (all emissions are in tons per winter day)

Year	Boston Region Action Emission	Emission Budget	Difference (Action Minus Budget)
2020	34.56	228.33	-193.77
2030	23.32	228.33	-205.01
2040	18.90	228.33	-209.43

In summary, this TIP is derived from a conforming LRTP, and the conformity determination has been prepared in accordance with EPA's final conformity regulations. The Boston Region MPO has found that the emission levels from this FFYs 2016–20 TIP demonstrate conformity with the SIP. Therefore, the implementation of the FFYs 2016–20 TIP is

consistent with the air quality goals in the Massachusetts SIP.

For financial constraint of the TIP, the transit and highway programs must be financially constrained to projections of available federal aid. As shown in the tables below, the federal fiscal years 2016–20 TIP complies with financial constraint.

7 CHAPTER SEVEN Operation and Maintenance

One requirement of Moving Ahead for Progress in the 21st Century (MAP-21) is the assessment of the operation and maintenance of the transportation system in the Boston region. State and regional agencies develop estimates of transit and highway operating and maintenance costs through their budgeting process. The information on projects and funding sources presented in Chapter 3 represents operations and maintenance estimates from the implementing agencies: the Cape Ann Transportation Authority (CATA), the MetroWest Regional Transit Authority (MWRTA), the Massachusetts Bay Transportation Authority (MBTA), and the MassDOT Highway Division. The tables on pages 7-2 and 7 -3 present the operations and maintenance expenditures for state fiscal years (SFYs) 2013 through 2015 for MassDOT projects. The tables on page 7-4 present operations and maintenance expenditures for SFYs 2013 through 2018 for the MBTA.

APPENDIX Universe of Projects for Highway Discretionary ("Regional Target") Funding & Evaluation Results

This appendix lists information about transportation projects that cities and towns in the region identified as their priority projects to be considered for funding through the Boston Region MPO's Highway Discretionary ("Regional Target") Program. It also contains the evaluation results of those projects scored by MPO staff based on the evaluation criteria.

Through an outreach process that seeks input from local officials and interested parties, the MPO staff compiles project requests and relevant information into a Universe of Projects list for the MPO. The Universe of Projects list includes projects in varied stages of development, from projects in the conceptual stage to those that are fully designed and ready to be advertised for construction. The MPO staff also collects data on each project in the universe to support the evaluation of projects.

The MPO's project selection process uses evaluation criteria to make the process of selecting projects for programming in the TIP both more logical and more transparent. The criteria are based on the MPO's visions and policies that were adopted for its Long-Range Transportation Plan (LRTP), Paths to a Sustainable Region. The MPO staff uses the project information and evaluations to prepare a First-Tier List of Projects that have high ratings in the evaluation process and could be made ready for advertising in the time frame of the TIP. The MPO staff then prepares a staff recommendation for the TIP taking into consideration the First-Tier list and factors such as the construction readiness of the project, the estimated project cost, community priority, geographic equity (to ensure that needs are addressed throughout the region), and consistency with the MPO's LRTP.

The MPO discusses the First-Tier List of Projects, the staff recommendation, and other information before voting on a draft TIP to release for a 30-day public review and comment period.

Table A-1 contains a summary of the evaluated projects in this year's TIP development process. Projects that are programmed in the FFYs 2016-20 TIP are in bold type.

A full list of the Universe of Projects (including those project that were evaluated and those projects that were not evaluated) is contained in Table A-2. Projects in bold type are programmed in the FFYs 2016–20 TIP.

BAPPENDIX Roadway Project Funding Application Forms & Evaluations

This appendix provides an explanation of the project funding application form for roadway projects that is used to understand requests for funding and to evaluate projects for possible programming. MPO staff and project proponents update these project funding application forms when new information becomes available. The forms are used to evaluate projects using criteria that reflect MPO visions and policies. Some information is provided specifically by the project proponent and other information is provided by MPO staff or by various state agencies.

Project funding application forms are available on the MPO website, http://www.ctps.org/. Proponents enter the project information on-line. Other information is input by MPO staff or automatically updated through links to other databases.

ROADWAY PROJECT FUNDING APPLICATION FORMS

Overview Tab

Project Background Information

1 ID Number

The MassDOT Project Information System (PROJIS) number assigned to the project. If the project does not have a PROJIS number, an

identification number will be assigned to the project by the MPO for internal tracking purposes.

2 Municipality(ies)

The municipality (or munipalities) in which the project is located.

3 Project Name

The name of the project. (Source: MassDOT)

4 Project Category

(determined by MPO staff):

- Arterial and Intersection Arterial roadway and intersection projects
- Major Highway Limited access roadway projects
- Bridge Bridge projects
- Bicycle and Pedestrian Projects dedicated solely to bicycle and pedestrian facilities such as walkways, paths, and trails
- Transit Transit projects consisting of improvements to trains, buses, and ferries
- Enhancement Streetscape improvements and enhancements to transportation facilities
- Regional Mobility Transportation demand management (TDM) and Transportation

Systems Management (TSM) programs or projects

5 MassDOT Highway District

The MassDOT Highway District in which the project is located.

6 MAPC Subregion

The MAPC subregion in which the project is located.

7 MAPC Community Type

The MAPC community type in which the project is located as defined by land use and housing patterns, recent growth trends, and projected development patterns.

8 Estimated Cost

The estimated total cost of the project. (Source: MassDOT)

9 Evaluation Rating

The number of points scored by the project, if it has been evaluated.

10 Description

A description of the project, including its primary purpose, major elements and geographic limits. (Source: MassDOT).

11 Project Length (Miles)

Total length of project in miles.

12 Project Lane Miles

Total lane miles of project.

Project Background Information

P1 Community Priority

The priority rank of the project as determined by the community. (Source: Proponent)

Additional Status

13 MPO/CTPS Study

Past UPWP-funded studies or reports conducted within the project area.

14 Air Quality Status

The air quality status of the project in the MPO's travel demand model. Projects with "exempt" status do not add capacity to the transportation system. Projects with "model" status add capacity to the transportation system and are included in the travel demand model.

Readiness Tab

"Readiness" is a determination of the appropriate year of programming for a project. In order to make this determination, the MPO tracks project development milestones and coordinates with the MassDOT Highway Division to estimate when a project will be ready for advertising.

All **non-transit** projects programmed in the first year of the Transportation Improvement Program (TIP) must be advertised before the end of the federal fiscal year (September 30). That funding authorization is not transferred to the next federal fiscal year, therefore any "leftover" funds are effectively "lost" to the region. If a project in the first year of the TIP is determined as "not ready to be advertised before September 30," it will be removed from the TIP and replaced with another project by amendment.

For projects in the first year of the TIP, it is important to communicate any perceived problems to the Boston Region MPO as soon as possible.

Project Background Information

15 Transportation Improvement Program (TIP) Status

Advertised, Programmed, Pre-TIP, or Conceptual (Source: MPO database):

- Advertised projects have been advertised by the implementation agency for bids.
- **Programmed** projects have been identified for funds in the current TIP.
- **Pre-TIP** projects have received Project Review Committee (PRC) approval from MassDOT Highway Division and have an "active" PROJIS number, but do not have funds identified in the TIP.
- **Conceptual** projects are project concepts or ideas that are not yet under design.

16 Functional Design Report (FDR) Status

The year that a functional design report was completed, if one has been conducted for the project.

17 Design Status

Current design status of the project in the MassDOT Highway Division Design Process. Dates are provided where available. (Source: MassDOT Project Info)

- PRC Approved
- 25% Submitted
- 25% Approved
- 75% Submitted
- 75% Approved
- 100% Submitted
- 100% Approved
- PS&E Submitted

18 Right-of-Way (ROW) Requirement

(Source: MassDOT Project Info):

Required – ROW action is required for completion of the project Not Required – No ROW action required for completion of the project

19 Right-of-Way (ROW) Responsibility

(Source: MassDOT Project Info):

MassDOT Responsibility – Providing the required right-of-way is the responsibility of MassDOT.

Municipal Responsibility – Providing the required right-of-way is the responsibility of the municipality.

Municipal Approval – Municipal approval has been given to the right-of-way plan (with date of approval):

20 Right-of-Way (ROW) Certification

(Source: MassDOT Project Info):

Expected – Expected date of ROW plan and order of taking

Recorded – Date the ROW plan and order of taking were recorded at the Registry of Deeds Expires – Expiration date of the rights of entry, easements, or order of taking

21 Required Permits

Permits required by the Massachusetts Environmental Policy Act (MEPA). (Source: MassDOT Project Info.) Possible required permits include:

- Environmental Impact Statement
- Construction Engineering Checklist
- Clean Water Act Section 404 Permit
- Rivers and Harbors Act of 1899 Section 10 Permit
- MEPA Environmental Notification Form
- MEPA Environmental Impact Report
- Massachusetts Historical Commission
 Approval
- M.G.L. Ch. 131 Wetlands Order of Conditions
- Conservation Commission Order of Conditions

System Preservation, Modernization, and Efficiency Tab

System Preservation, Modernization, and Efficiency of our roadway is important to the vitality of our region. The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize the preservation, modernization and efficiency of the existing transportation system. The MPO has expressed these measures in the following policies:

- Adapt to fiscal constraints by developing needsbased, low-cost strategies for addressing mobility, access, and accessibility and by pursuing alternative funding sources and mechanisms
- Put a priority on programs, services, and projects that maximize efficiency through ITS, technology, TSM, and M&O; turn to technology before expansion
- Bring and keep the network (particularly bike and pedestrian facilities) into a state of good repair (SGR); set funding objectives for this
- For roadway investments, give priority to maintaining the regional network of bridges and roads

Project Background Information

22 Existing Pavement Condition

(Source: MassDOT Roadway Inventory File)

Pavement Roughness (IRI) – International Roughness Index (IRI) rating reflects the calibrated value in inches of roughness per mile. IRI ratings are classified as follows:

- Good Ranges of 0 190
- Fair Ranges of 191- 320
- Poor Above 320

23 Equipment Condition

Existing signal equipment condition. (Source: CMP, Massachusetts permitted signal information, municipal signal information, submitted design).

24 CMP Congested Area

Identifies a project that is located within a Boston Region MPO Congestion Management Process (CMP) area.

Proponent Provided Information

P2 What are the infrastructure condition needs or issues of the project area?

Please include additional pavement information from municipal pavement management programs. In addition, qualitative descriptions of existing problems or anticipated needs can be provided. When applicable, this information should be consistent with project need information provided in the MassDOT Project Need Form. (Source: Proponent)

P3 How does this project address the infrastructure condition needs or issues in the project area?

Please include detail regarding the pavement management system employed by the community or agency, and of how this system will maximize the useful life of any pavement repaired or replaced by the project. (Source: Proponent)

Evaluation

System Preservation, Modernization and Efficiency Evaluation Scoring (36 total points possible):

Improves substandard pavement (up to 6 points)

- +6 IRI rating greater than 320: Poor and pavement improvements are included in the project
- +4 IRI rating between 320 and 191: Fair and pavement improvements are included in the project

0 IRI rating less than 190: Good or better

Improves substandard signal equipment condition (up to 6 points)

- +6 Poor condition and all equipment will be replaced
- +4 Mediocre condition, replacement of majority of equipment will occur
- +2 Fair condition, partial replacement will occur 0 All other values

Improves traffic signal operations (signal equipment upgrades, including for adaptive signal controls and coordination with adjacent signals (ITS) (up to 6 points)

+6 Meets or addresses criteria to a high degree

- +4 Meets or addresses criteria to a medium degree
- +2 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

In a Congestion Management Process Identified Area (up to 6 points)

- +6 CMP data indicates project area is in one of the most highly congested project areas monitored
- +4 CMP data indicates project area is in one of the most congested project areas monitored
- +2 CMP data indicates project area is in a congested project areas monitored
- 0 CMP data indicates project area is in the top 80 to 51 % of the most congested project areas monitored

Improves intermodal accommodations/connections to transit (up to 6 points)

+6 Meets or addresses criteria to a high degree
- +4 Meets or addresses criteria to a medium degree
- +2 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Implements ITS strategies other than traffic signal operations (improve traffic flow as identified by an ITS strategy for the municipality or state (e.g. variable message signs) (up to 6 points)

- +6 Meets or addresses criteria to a high degree
- +4 Meets or addresses criteria to a medium degree
- +2 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Livability and Economic Benefit Tab

The livability and economic benefit of our roadway is important to the vitality of our region. The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize and implement their livability policies. The MPO has expressed these measures in the following policies:

- Invest in projects and programs that are consistent with MetroFuture land use planning (serving already-developed areas; locations with adequate sewer and water, areas identified for economic development by state, regional, and local planning agencies; and density)
- Support health-promoting transportation options; expand and close gaps in the bicycle and pedestrian networks; promote a complete-streets philosophy
- Support urban and context-sensitive design to protect cultural, historic, and scenic resources, community cohesiveness, quality of life; fund enhancements at a reasonable cost

- Support state-of-the-practice parking policies
- Use economic impacts (local and regional) as a criteria for evaluating projects and programs; recognize that economic vitality plays a role in community livability

Project Background Information

Using the current available zoning coverage, the following calculations will be made by MAPC:

25 Bicycle and Pedestrian Facilities

(Source: MassDOT Bicycle Facility Inventory and Roadway Inventory File and MPO bicycle GIS coverage)

Pedestrian Facilities:

- Sidewalks Indicates if sidewalks are present on one side or on both sides of the roadway.
- Shared Use Path Facilities with a stabilized firm surface and separated from motor vehicle traffic by an open space or barrier.
- Minimally Improved Path Facilities with a rough surface and separated from motor vehicle traffic by an open space or barrier.

Bicycle Facilities:

 Cycle Track – Bikeways separated from parallel motor vehicle roadway by a line of parked cars, landscaping, or another form of physical barrier that motor vehicles cannot cross.

- Striped Bicycle Lane A portion of a roadway (greater than or equal to 4 feet) which has been designated by striping, and pavement markings for preferential or exclusive use by bicyclists.
- Marked Shared Lane Travel lanes with specific bicycle markings, often referred to as sharrows.
- Signed Route Roadway is designated and signed as a bicycle route.
- Shared Use Path Facilities with a stabilized firm surface and separated from motor vehicle traffic by an open space or barrier.
- Minimally Improved Path Facilities with a rough surface and separated from motor vehicle traffic by an open space or barrier.

26 TDM Program Required for All New Developments

For all new development, a Transportation demand management (TDM) program is required that implements at least four of the following components:

- Ridesharing program
- Parking restrictions or pricing policies
- Alternative work hours
- Telecommuting options
- Subsidized transit use and other financial incentives
- Areawide strategies such as membership in Transportation Management Associations
- Subsidies for local transit service
- Multi-occupant vehicle access

In addition, this criteria can be met if the community is taking steps to significantly reduce single-occupant travel as part of the project or in the project area.

27 Targeted Development Areas

A targeted development area is located within ½ mile of the project area. Eligible targeted development areas include 43D, 43E, and 40R sites, Regionally Significant Priority Development Areas, Growth District Initiatives, and MBTA transit station areas.

- **43D Priority Development Site**: The Chapter 43D Program offers communities expedited permitting to promote targeted economic and housing development. Sites approved under the program are guaranteed local permitting decisions on priority development sites within 180 days. (Source: Executive Office of Housing and Economic Development)
- 43E Priority Development Site: The Chapter 43E Program promotes the expedited permitting of commercial, industrial, residential and mixed-use projects on sites with dual designation as a Priority Development Site and Growth District. Sites approved under the program are guaranteed state permitting decisions on priority development sites within 180 days. (Source: Executive Office of Housing and Economic Development)
- 40R Smart Growth Zoning Overlay District: The program encourages communities to zone for compact residential and mixed-use development in "smart

growth" locations by offering financial incentives and control over design. (Source: Department of Housing and Community Development)

- Regionally Significant Priority
 Development Area: A site or district that has
 been identified by the local municipality as an
 eligible and desirable site for housing and/or
 economic development, and which has been
 identified as a "regionally significant" site by
 MAPC through a subregional screening
 process that considers development
 potential, accessibility, environmental
 impacts, equity, and other factors.
- **Growth District Initiative**: The EOHED initiative focuses on expediting commercial and residential development at appropriate locations for significant new growth. (Source: Executive Office of Housing and Economic Development)
- Eligible MBTA Transit Station Area: Areas within ½ mile of existing or proposed subway, trolley, commuter rail, or ferry service, with the exception of "Undeveloped" station areas as defined by MAPC (www.mapc.org/TOD); or areas within ¼ mile of an MBTA "Key Bus Route."

28 Municipality Provides Financial or Regulatory Support for Targeted Development

The proposed project will improve access to or within a commercial district served by a Main Street organization, local business association, Business Improvement District, or comparable, geographically targeted organization (i.e., not a city/town-wide chamber of commerce).

- 29 Local Efforts to improve Design and Access:
 - Form-based codes
 - Official design guidelines for new development/redevelopment
 - Official local plan for pedestrian/bike/handicap access, the recommendations of which are reflected in the proposal

Proponent Provided Information

P4 How does the project improve access for pedestrians, bicyclists, and public transportation? How does the project support MassDOT's mode shift goal of tripling the share of walking, biking, and transit travel?

Describe what improvements are in the project for pedestrians, bicyclists, and public transportation, and what level of improvement will be achieved over existing conditions. (Source: Proponent)

P5 How is the project consistent with local land use policies? How does the project advance local efforts to improve design and access?

Explain how this project will support existing or proposed local land use policies. (Source: Proponent)

P6 How does the zoning of the area within ½ mile of this project support transit-oriented development and preserve any new roadway capacity?

Will the project have an impact on adjacent land uses? Please review the land use information if the project is expected to have an impact on land use. Is there a local project currently under development that would provide a better balance between housing and jobs in this corridor? If so, please provide details on the project status. (Source: Proponent)

P7 How is the project consistent with state, regional, and local economic development priorities?

Explain how this project will support economic development in the community or in the project area (Source: Proponent)

Evaluation

Livability and Economic Benefit Evaluation Scoring (29 total points possible):

Design is consistent with complete streets policies (up to 4 points)

- +1 Project is a "complete street"
- +1 Project provides for transit service
- +1 Project provides for bicycle facilities
- +1 Project provides for pedestrian facilities
- 0 Does not provide any complete streets components

Provides multimodal access to an activity center (up to 3 points)

- +1 Project provides transit access (within a quarter mile) to an activity center
- +1 Project provides bicycle access to an activity center
- +1 Project provides pedestrian access to an activity center
- 0 Does not provide multimodal access

Reduces auto dependency (up to 8 points)

- +3 Project provides for a new transit service
- +1 Project is identified in MassDOT's Bay State Greenway Priority 100
- +1 Project completes a known gap in the bicycle or pedestrian network
- +1 Project provides for a new bicycle facility
- +1 Project provides for a new pedestrian facility
- +1 Project implements a transportation demand management strategy
- 0 Does not provide for any of the above measures

Project serves a targeted development site (40R, 43D, 43E, Regionally Significant Priority Development Area, Growth District Initiative, or eligible MBTA transit station areas) (up to 6 points)

- +2 Project provides new transit access to or within a site
- +1 Project improves transit access to or within a site
- +1 Project provides for bicycle access to or within a site
- +1 Project provides for pedestrian access to or within a site
- +1 Project provides for improved road access to or within a site

Provides for development consistent with the compact growth strategies of MetroFuture (up to 5 points)

- +2 Project mostly serves an existing area of concentrated development+1 Project partly serves an existing area of concentrated development
- +1 Project complements other local efforts to improve design and access
- +2 Project complements other local financial or regulatory support to foster economic revitalization

0 Does not provide for any of the above measures Project improves Quality of Life (up to 3 points)

- +1 Reduces cut through within the project area
- +1 Implements traffic calming measures
- +1 Improves the character of the project area

Mobility Tab

Increased travel choices and improved access for and across all modes—pedestrian, bicycle, public transportation, and vehicular—is a key mobility issue. Mobility is not merely about moving motor vehicles more quickly through an intersection or along a roadway segment, but includes increasing access and promoting use of all modes. The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize and implement their mobility policies. The MPO has expressed these measures in the following policies:

- Strengthen conditions between modes; close gaps in the existing network
- Improve access and accessibility to transit
- Expand transit bicycle, and pedestrian networks; focus bicycle investment (lanes and paths) on

moving people between activity centers (and access to transit)

- Integrate payment methods for fares and parking across modes
- Support TDM, TMAs, shuttles, and carpooling
- Address low cost capacity constraints and bottlenecks in the existing system before expansion

Project Background Information

29 Transit Vehicles Use of Roadway

Identifies the fixed route transit vehicles using the roadway

- 30 Usage
 - Average Daily Traffic Volumes
 - Average Daily Truck Volumes
 - Average Weekday Transit Rider Volumes
 - AM Peak Hour Pedestrian Volumes
 - AM Peak Hour Bicyclist Volumes
 - PM Peak Hour Pedestrian Volumes
 - PM Peak Hour Bicyclist Volumes

31 A.M./P.M. Travel Time Index**

Travel Time Index directly compares peak-period travel time conditions with free-flow travel time conditions. Travel time Index indicates how much contingency time should be considered to ensure an on-time arrival during the peak period versus optimum travel times.

Travel time index = average peak-period travel time / free-flow travel time Information provided is determined by the Boston Region MPO's CMP Arterial Performance Dashboard. If a Project Funding Application Form does not have any CMP data listed, this does not necessarily mean that the roadway or intersection does not experience congestion problems; this simply means that data from the CMP are not available.

32 A.M./P.M. Speed Index**

Speed index is equal to the average speed divided by the posted speed limit of a Traffic Message Channel (TMC). Speed index indicates congestion more accurately than travel speeds alone because low travel speeds may be a result of low speed limits on certain facilities.

Speed Index = average speed / posted speed limit

Information provided is determined by the Boston Region MPO's CMP Arterial Performance Dashboard. If a Project Funding Application Form does not have any CMP data listed, this does not necessarily mean that the roadway or intersection does not experience congestion problems; this simply means that data from the CMP are not available.

33 Supports Regional Freight Infrastructure

- Supports infrastructure improvements on a designated or known truck route
- Supports infrastructure improvement to an existing or proposed industrial center or distribution center

• Supports infrastructure improvement to a major port or airport or intermodal transfer facility

**Please refer to the CMP Arterial Performance Dashboard (hyperlink to http://www.ctps.org/map/www/apps/arterialHighw ayPerformanceDashboard/index.html) for data on roadway congestion in the MPO region.

Proponent Provided Information

P8 What is the primary mobility need for this project and how does it address that need?

Describe the need for the project from a local and a regional perspective. What are the existing or anticipated mobility needs the project is designed to address? Please include information on how the project improves level of service and reduces congestion, provides multimodal elements (for example, access to transit stations or parking, access to bicycle or pedestrian connections), enhances freight mobility, and closes gaps in the existing transportation system. For roadway projects, it is MPO and MassDOT policy that auto congestion reductions not occur at the expense of pedestrians, bicyclists, or transit users. Please explain the mobility benefits of the project for all modes. When applicable, this information should be consistent with project need information provided in the MassDOT Project Need Form. (Source: Proponent)

P9 What intelligent transportation systems (ITS) elements does this project include?

Examples of ITS elements include new signal systems or emergency vehicle override applications. (Source: Proponent)

Evaluation

Mobility Evaluation Scoring (25 total points possible):

Existing peak hour level of service (LOS) (up to 3 points)

- +3 Source data indicates project area has an LOS value of F at peak travel times
- +2 Source data indicates project area has an LOS value of E at peak travel times
- +1 Source data indicates project area has an LOS value of D at peak travel times
- 0 All other values

Improves or completes an MPO or State identified freight movement issue (Identified in MPO or State published freight plan) (up to 3 points)

- +3 Project implements a solution to an MPO or State identified freight movement issue
- +2 Project supports significant improvements or removes barriers to an existing MPO or State identified freight movement issue
- +1 Project supports improvements to an existing MPO or State identified freight movement issue 0 All other results

Address proponent identified primary mobility need (Project design will address the primary mobility need identified by the proponent in the question P7 and evaluated by staff) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Address MPO-identified primary mobility need (Project design will address the primary mobility need identified by MPO staff) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Project reduces congestion (up to 6 points)

- +6 Meets or addresses criteria to a high degree
- +4 Meets or addresses criteria to a medium degree
- +2 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Improves transit reliability (up to 7 points)

- +2 Implements queue jumping ability for transit
- +2 Project prioritizes signals for transit vehicles (ITS)
- +2 Project provides for a dedicated busway
- +1 Project provides for a bus bump out

Environment and Climate Change Tab

The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize and implement their environmental policies. The MPO has expressed these measures in the following:

• Avoid investments that increase pressure on developing greenfields; support investments that facilitate clean-up of brownfields

- Promote fleet management and modernization
- Support high-occupancy-vehicle travel options
- Protect natural and cultural resources and public health; plan early to avoid and mitigate impacts, such as stormwater and groundwater impacts; and air quality impacts, including introduction of additional fine particulates
- Promote energy conservation and use of alternative energy sources
- Avoid funding projects that increase exposure of at-risk populations to ultra-fine particulates
- Promote investments and give priority to projects and programs with lower life-cycle costs and emissions
- Invest so as to increase mode share of transit and non-motorized modes
- Work with environmental and cultural resource agencies to reach environmental objectives

Project Background Information

34 CO₂ Impact

The quantified or assumed annual tons of carbon dioxide estimated to be reduced by the project. (Source: MPO Database)

35 Located in a Green Community

Project is in an Executive Office of Energy and Environmental Affairs (EOEEA) certified Green Community. (Source: EOEEA)

36 Located in an Area of Critical Environmental Concern

Areas designated as Areas of Critical Environmental Concern by the Massachusetts Secretary of Environmental Affairs. (Source: MassGIS)

37 Located adjacent to (within 200 feet of) a waterway

Hydrographic (water related) features, including surface water (lakes, ponds, reservoirs), flats, rivers, streams, and others from MassGIS. Two hundred feet from the hydrographic feature is the distance protected by the Massachusetts Rivers Protection Act. (Source: MassGIS)

Proponent Provided Information

P10 How does the project relate to community character?

Is the project located in an existing community or neighborhood center or other pedestrian-oriented area? Explain the community context (cultural, historical, other) in which the project will occur and indicate the positive or negative effect this project will have on community character. (Source: Proponent)

P11 What are the environmental impacts of the project?

How will this project improve air quality, improve water quality, or reduce noise levels in the project area and in the region? Air quality improvements can come from reductions in the number or length of vehicle trips or from reductions in vehicle cold starts. Water quality improvements can result from reductions in runoff from impervious surfaces, water supply protection, and habitat protection. Noise barriers can reduce noise impacts. (Source: Proponent)

Evaluation

Environment and Climate Change Evaluation Scoring (25 total points possible):

- Air Quality (improves or degrades) (up to 5 points)
- +5 Project significant improves air quality
- +3 Project includes major elements improving air quality
- +1 Project includes minor elements improving air quality
- 0 Project has no significant air quality impacts
- CO₂ reduction (up to 5 points)
- +5 Project will provide for significant movement towards the goals of the Global Warming Solutions act
- +3 Project will provide for movement towards the goals of the Global Warming Solutions Act
- +1 Project will provide a minor air quality benefit 0 Project will no additional benefit to air quality

Project is in an Executive Office of Energy and Environmental Affairs (EOEEA) certified "Green Community" (up to 4 points)

+4 Project is in a "Green Community"0 Project is not in a "Green Community"

Project reduces VMT/VHT (up to 7 points)

- +3 Project provides for a new transit service
- +1 Project provides for improved transit access
- +1 Project provides for a new bicycle facility
- +1 Project provides for a new pedestrian facility

- +1 Project implements a transportation demand management strategy
- 0 Does not provide for any of the above measures

Addresses identified environmental impacts (Project design will address the environmental impacts identified by the proponent in the question P9 and/or identified by MPO staff) (up to 4 points)

- +4 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Environmental Justice Tab

The MPO developed its Transportation Equity Program to provide a systematic method of considering environmental justice in all of its transportation planning work. There are twenty-eight environmental justice (EJ) areas identified by the MPO based on percentage of minority residents and percentages of households with low incomes.

The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize and implement their environmental justice policies. The MPO has expressed these measures in the following policies:

- Continue outreach and analysis to identify equity needs; continue to monitor system performance
- Address identified equity needs related to service and removing or minimizing burdens (air pollution, unsafe conditions, community impacts)

- Track implementing agencies' actions responding to transportation need identified in MPO outreach and analysis; encourage action to address needs
- Strengthen avenues for involvement of low-income and minority persons in decision making
- Reduce trip times for low-income and minority persons in decision making
- Give priority to heavily used transit services over new, yet-to-be proven services

Project Background Information

38 Located within ½ mile of an Environmental Justice Area

Twenty-eight areas were identified by the MPO based on percentage of minority residents and percentages of households with low incomes. The following thresholds were determined by the MPO for low-income and minority environmental justice areas (Source: 2010 U.S. Census):

- Low Income The MPO median household income in 2010 was \$70,829. A low-income TAZ was defined as having a median household income at or below 60% of this level (\$42,497).
- Minority A minority TAZ was defined as having a percentage of minority population greater than 50% and a minimum minority population of 200 people.
- *39 Located within ½ mile of an Environmental Justice Population Zone****

The MPO's thresholds for low-income and minority population zones are less restrictive, and therefore include many more TAZs:

- Low Income The MPO median household income in 2010 was \$70,829. A low-income TAZ was defined as having a median household income at or below 60% of this level (\$42,497). (Source: 2010 U.S. Census)
- Minority A minority TAZ was defined as having a percentage of minority population greater than 27.8%. Title VI guidelines suggest that a minority community be defined as one with a minority population which is greater than the regional percentage of minority residents. (Source: 2010 U.S. Census)
- 40 If this project is located in an MPO-defined environmental justice area or environmental justice population zone, how would it improve access to an existing transit facility?

Explain how this project would provide needed or additional access to a transit facility. (Source: Proponent)

41 If this project is located in an MPO-defined environmental justice area or environmental justice population zone, how would it improve safety for users of the transportation facility?

Explain how this project would provide needed or additional safety improvements to the facility identified. (Source: Proponent)

42 If this project is located in an MPO-defined environmental justice area or environmental justice population zone, how would it improve air quality?

Explain how this project would provide needed or additional air quality improvements to the area. (Source: Proponent) 43 If this project is located in an MPO-defined environmental justice area or environmental justice population zone, does it address an MPOidentified EJ community need?

The MPO conducts outreach to the EJ communities and compiles a list of identified needs. Is this project addressing one of these needs? (Source: Proponent)

***Please refer to a map of the Environmental Justice (E J) population zones (hyperlink to http://www.ctps.org/Drupal/data/pdf/programs/equ ity/EJ_Figure_1_Low_Income_Minority.pdf) in the

Boston Region M P O for more information on E J population zones.

Proponent Provided Information

P12 Are any other Environmental Justice issues addressed by this project?

This answer should only be addressed by those projects in an Environmental Justice area or population zone that address an environmental justice need. Please be specific. (Source: Proponent)

Evaluation

Environmental Justice Evaluation Scoring (10 total points possible):

Improves transit for an EJ population (up to 3 points)

+3 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and will provide new transit access

- +1 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and will provide improved access
- 0 Project provides no improvement in transit access or is not in an MPO environmental justice area or population zone

Design is consistent with complete streets policies in an EJ area (up to 4 points)

- +1 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and is a "complete street"
- +1 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and provides for transit service
- +1 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and provides for bicycle facilities
- +1 Project is located within half-mile buffer or affects an MPO environmental justice area or population zone and provides for pedestrian facilities
- 0 Does not provide any complete streets components

Addresses an MPO-identified EJ transportation issue (up to 3 points)

- +3 Project located within half-mile buffer or affects an MPO environmental justice area or population zone and the project will provide for substantial improvement to an MPO identified EJ transportation issue
- +2 Project located within half-mile buffer or affects an MPO environmental justice area or population

zone and the project will provide for improvement to an MPO-identified EJ transportation issue

Project provides no additional benefit and/or is not in an MPO environmental justice area or population zone

-10 Creates a burden in an EJ area

Safety and Security Tab

The evaluation criteria below serve as a way to measure the MPO's efforts to emphasize and implement their safety and security policies. The MPO has expressed these measures in the following policies:

- Implement actions stemming from all-hazards planning
- Maintain the transportation system in an SGR
- Use state-of-the-practice safety elements; address roadway safety deficiencies (after safety audits) and transit safety (including federal mandates)
- Support incident management programs and ITS
- Protect critical infrastructure; address transit security vulnerabilities; upgrade key transportation infrastructure to a "hardened" design standard
- Improve safety for pedestrians and cyclist; ensure that safety provisions are incorporated into shared-use corridors
- Give priority to safety projects that reduce the severity of crashes, especially those that improve safety for all
- Promote safety through supporting the reduction of base speed limit (municipalities) to 25 miles per hour and education and enforcement on rules of the road, all modes

Project Background Information

44 Top 200 Rank

Ranks of highest crash intersection clusters in the project area listed within MassDOT's top 200 high crash intersection locations. The crash rankings are weighted by crash severity as indicated by Equivalent Property Damage Only (EPDO) values. (Source: MassDOT Highway Division 2010-2012 Top Crash Locations Report)

45 EPDO/Injury Value

An estimated value of property damage. Fatal crashes are weighted by 10, injury crashes are weighted by 5 and property damage only or nonreported is weighted by 1. (Source: MassDOT Highway Division, 2010-2012)

46 Crash Rate/Crashes per Mile

Intersection projects list the crash rate as total crashes per million vehicle entering the intersection. Arterial projects list the crash rate as total crashes per mile. (Source: MassDOT Highway Division, 2010-2012)

47 Bicycle-Involved Crashes (Total EPDO)

Total EPDO value of bicycle-involved crashes in the project area. (Source: MassDOT Highway Division, 2010-2012)

48 Pedestrian-Involved Crashes (Total EPDO)

Total EPDO value of pedestrian-involved crashes in the project area. (Source: MassDOT Highway Division, 2010-2012) 49 Truck-Involved Crashes (Total EPDO)

Total EPDO value of truck-involved crashes in the project area. (Source: MassDOT Highway Division, 2010-2012)

50 Natural Hazard Zones***

- Project lies within a flood zone
- Project lies within a hurricane surge zone
- Project lies within ¼ mile of an emergency support location
- Project lies within an area of liquefiable soils
- ****Please refer to the All-hazards Planning Application (hyperlink to http://www.ctps.org/map/www/apps/eehmApp/pub
- _eehm_index.html) for more information on natural hazard zones.

Proponent Provided Information

P13 What is the primary safety need associated with this project and how does it address that need?

Describe the need for the project from a local and a regional perspective. What are the existing safety needs/improvements the project is designed to address? How will this design accomplish those needed improvements? Please be as specific as possible. When applicable, this information should be consistent with project need information provided in the MassDOT Highway Division Project Need Form. (Source: Proponent)

P14 What is the primary security need associated with this project and how does it address that need?

Describe the need for the project from a local and a regional perspective. What are the existing security needs/improvements the project is designed to address? How will this design accomplish those needed improvements? Please be as specific as possible. When applicable, this information should be consistent with project need information provided in the MassDOT Highway Division Project Need Form. (Source: Proponent)

Evaluation

Safety and Security Evaluation Scoring (29 total points possible):

Improves emergency response (up to 2 points)

- +1 Project improves an evacuation route, diversion route, or alternate diversion route
- +1 Project improves an access route to or in proximity to an emergency support location

Design affects ability to respond to extreme conditions (up to 6 points)

- +2 Project addresses flooding problem and/or sea level rise and enables facility to function in such a condition
- +1 Project addresses facility that serves as a route out of a hurricane zone
- +1 Project brings facility up to current seismic design standards
- +1 Project improves access to an emergency support location

+1 Project addresses critical transportation infrastructure

EPDO/Injury Value Using the Commonwealth's listing for Estimated Property Damage Only (EPCO) or Injury Value information (up to 3 points)

- +3 If the value is in the top 20% of most assessed value
- +2 If the value is in the top 49 to 21% of most assessed value
- +1 If the value is in the top 50 to 1% of the most assessed value
- 0 If there is no loss

Design addresses proponent identified primary safety need (Project design will address the primary safety need identified by the proponent in the question P4) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 1 Does not meet or address criteria

Design addresses MPO-identified primary safety need (Project design will address the primary MPOidentified safety need) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Improves freight related safety issue (Project design will be effective at improving freight related safety issues including truck crashes) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Improves bicycle safety (Project design will be effective at improving bicycle related safety issues including crashes) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Improves pedestrian safety (Project design will be effective at improving pedestrian related safety issues including crashes) (up to 3 points)

- +3 Meets or addresses criteria to a high degree
- +2 Meets or addresses criteria to a medium degree
- +1 Meets or address criteria to a low degree
- 0 Does not meet or address criteria

Improves safety or removes an at grade railroad crossing (up to 3 points)

- +3 Project removes an at grade railroad crossing
- +2 Project significantly improves safety at an at grade railroad crossing
- +1 Project improves safety at an at grade railroad crossing
- 0 Project does not include a railroad crossing

Other Tab

Cost per Unit

These two measures of cost per unit are derived by dividing project cost by quantified data in the MPO

database. These measures can be used to compare similar types of projects.

56 \$ per User

Cost divided by ADT (ADT for roadway projects or other user estimate)

57 \$ per Lane Mile

Cost divided by proposed total lane miles

MassDOT coordinated with MPOs and regional planning agencies (RPAs) on the implementation of greenhouse gas (GHG) tracking and evaluation in the development of the MPOs' 2035 long-range transportation plans (LRTPs), which were adopted in September 2011. The list of GHGs is made up of multiple pollutants, including carbon dioxide (CO_2) , methane, nitrous oxide, and fluorinated gases. CO₂ and methane are the most predominant GHGs. CO₂ comprises approximately 84 percent of all GHG emissions and enters the atmosphere primarily through the burning of fossil fuels. Methane comprises approximately 10 percent of GHGs and is emitted during the production and transport of coal, natural gas, and oil. GHG emissions from the transportation sector are primarily through the burning of fossil fuels; therefore, reductions of GHG were measured by calculating reductions in emissions of CO₂ associated with projects listed in the LRTP.

Working together, MassDOT and the MPOs have attained the following milestones:

 Modeling and long-range statewide projections for GHG emissions resulting from the transportation sector. Using the Boston MPO's regional model and the statewide travel demand model for the remainder of the state, GHG emissions were projected for 2020 no-build and build conditions, and for 2035 no-build and build conditions.

 All of the MPOs included these GHG emission projections in their LRTPs, along with a discussion of climate change and a statement of MPO support for reducing GHG emissions as a regional goal.

In addition to monitoring the GHG impacts of capacity-adding projects in the LRTP, it is also important to monitor and evaluate the GHG impacts of all transportation projects that are programmed in the TIP. The TIP includes both the larger, capacity-adding projects from the LRTP and smaller projects, which are not included in the LRTP, that may have impacts on GHG emissions. The principal objective of this tracking is to enable the MPOs to evaluate the expected GHG impacts of different projects and to use this information as a criterion for prioritizing and programming projects in future TIPs.

In order to monitor and evaluate the GHG impacts of TIP projects, MassDOT and the MPOs have developed approaches for identifying the anticipated GHG emission impacts of different project types. All TIP projects have been sorted into two main categories for analysis: projects with quantified impacts and projects with assumed impacts. Projects with quantified impacts consist of capacity-adding projects from the LRTP and projects from the TIP that underwent a CMAQ spreadsheet analysis. Projects with assumed impacts include projects that would be expected to produce a minor decrease or increase in emissions and projects that would be assumed to have no CO_2 impact.

PROJECTS WITH QUANTIFIED IMPACTS

Travel Demand Model Set

Capacity-adding projects included in the long-range transportation plan and analyzed using the travel demand model set. No independent TIP calculations were done for these projects.

Reduction or Increase in the Number of Tons of CO₂ Associated with the Project

The Office of Transportation Planning at MassDOT provided spreadsheets that are used for determining Congestion Management and Air Quality (CMAQ) Improvement Program eligibility. The data and analysis required by MPO staff to conduct these calculations is typically derived from functional design reports submitted for projects at the 25 percent design phase. Estimated projections of CO₂ for each project in this category are shown in tables C-1 and C-2. A note of "To be determined" is shown for those projects for which a functional design report was not yet available. Analyses are done for the following types of projects:

Traffic Operational Improvement

An intersection reconstruction or signalization project that typically reduces delays and therefore idling.

- Step 1: Calculate the AM-peak-hour total intersection delay (secs)
- Step 2: Calculate the PM-peak-hour total intersection delay (secs)
- Step 3: Select the peak hour with the longer intersection delay
- Step 4: Calculate the selected peak-hour total intersection delay with improvements
- Step 5: Calculate the vehicle delay in hours per day (assumes peak-hour delay is 10 percent of daily delay)
- Step 6: Input the MOBILE 6/MOVES emission factors for arterial idling speed
- Step 7: Calculate the net emissions change in kilograms per day
- Step 8: Calculate the net emissions change in kilograms per year (seasonally adjusted)
- Step 9: Calculate the cost-effectiveness (first year cost per kilogram of emissions reduced)

Pedestrian and Bicycle Infrastructure

A shared-use path that would enable increased walking and biking and reduce automobile trips.

 Step 1: Calculate the estimated number of one-way trips based on the percentage of workers residing in the communities of the facilities service area and the communities' bicycle and pedestrian commuter mode share

- Step 2: Calculate the reduction in vehiclemiles traveled per day and per year (assumes each trip is the length of the facility; assumes the facility operates 200 days per year)
- Step 3: Input the MOBILE 6/MOVES emission factors for the average commuter travel speed (assumes 35 mph)
- Step 4: Calculate the net emissions change in kilograms per year (seasonally adjusted)
- Step 5: Calculate the cost-effectiveness (first year cost per kilogram of emissions reduced)

Calculations can be performed on the following project types, however there are no projects of these types in the TIP.

New and Additional Transit Service

A new bus or shuttle service that reduces automobile trips.

Park-and-Ride Lot

A facility that reduces automobile trips by encouraging HOV travel through carpooling or transit

Bus Replacement

A new bus that replaces an old bus with newer, cleaner technology.

PROJECTS WITH ASSUMED IMPACTS

Assumed Nominal Decrease or Increase in CO₂ Emissions

Projects that would be expected to produce a minor decrease or increase in emissions that cannot be calculated with any precision. Examples of such projects include roadway repaving or reconstruction projects that add a new sidewalk or new bike lanes. Such a project would enable increased travel by walking or bicycling, but for which there may not be sufficient data or analysis to support any projections of GHG impacts. These projects are categorized as an assumed nominal increase or decrease from pedestrian and/or bicycle infrastructure, intelligent transportation systems (ITS) and/or traffic operational improvements, transit infrastructure, and freight infrastructure.

No CO₂ Impact

Projects that do not change the capacity or use of a facility (for example, a resurfacing project that restores a roadway to its previous condition, and a bridge rehabilitation/replacement that restores the bridge to its previous condition) would be assumed to have no CO_2 impact.

More details on each project, including a description of each project's anticipated CO₂ impacts, are in Chapter 3. The following tables display the GHG impact analyses of projects funded in the Highway Program (Table C-1) and Transit Program (Table C-2).

MassDOT Project ID	Municipality(ies)	MassDOT Project Description	Analysis of GHG Impact
607748	Acton	Intersection & Signal Improvements on SR 2 & SR 111 (Massachusetts Avenue) at Piper Road & Taylor Road	To be determined
604123	Ashland	Reconstruction on Route 126 (Pond Street), from the Framingham T.L. to the Holliston T.L.	61 tons of CO ₂ reduced
29492	Bedford, Billerica, and Burlington	Middlesex Turnpike Improvements, from Crosby Drive North to Manning Road (Phase III)	Model
606117	Boston	Traffic Signal Improvements at 10 Locations	13 tons of CO ₂ reduced
606453	Boston	Improvements on Boylston Street, from Intersection of Brookline Avenue & Park Drive to Ipswich Street	806 tons of CO_2 reduced
605789	Boston	Reconstruction of Melnea Cass Boulevard	To be determined
606226	Boston	Reconstruction of Rutherford Avenue, from City Square to Sullivan Square	Model
606134	Boston	Traffic Signal Improvements on Blue Hill Avenue and Warren Street	To be determined
605110	Brookline	Intersection & Signal Improvements at Route 9 & Village Square (Gateway East)	22 tons of CO_2 reduced
607652	Everett	Reconstruction of Ferry Street, South Ferry Street and a Portion of Elm Street	159 tons of CO_2 reduced
607309	Hingham	Reconstruction and Related Work on Derby Street from Pond Park Road to Cushing Street	166 tons of CO_2 reduced
606043	Hopkinton	Signal & Intersection Improvements on Route 135	566 tons of CO ₂ reduced
607409	Lexington	Reconstruction on Massachusetts Avenue, from Marrett Road to Pleasant Street	80 tons of CO ₂ reduced
602077	Lynn	Reconstruction on Route 129 (Lynnfield Street), from Great Woods Road to Wyoma Square	To be determined
604810	Marlborough	Reconstruction of Route 85 (Maple Street)	325 tons of $\rm CO_2$ reduced
605608	Dedham	Resurfacing & Related Work on Route 109	No CO ₂ impact
600518	Hingham	Intersection Improvements at Derby Street, Whiting Street (Route 53) and Gardner Street	Increase of 60 tons of CO_2
607488	Southborough	Resurfacing & Related Work on Route 9, from the Framingham Townline to White Bagley Road	No CO ₂ impact

MassDOT			
Project ID	Municipality(ies)	MassDOT Project Description	Analysis of GHG Impact
607340	Wellesley	Resurfacing on Route 9, from (approx.) Dearborn Street to the Natick T.L.	No CO ₂ impact
608059	Salem	Stormwater Improvements along Route 107 (Salem Bypass Road)	No CO ₂ impact
608134	Hingham	Stormwater Improvements along Route 3A/Route 28	No CO ₂ impact
608221	Marlborough	Resurfacing and Related Work on Route 20	No CO ₂ impact
607759	Boston	Intersection and Signal Improvements at the VFW Parkway and Spring Street	To be determined
608214	Winchester	Stormwater Improvements along Route 3	No CO ₂ impact
607428	Milford	Resurfacing & Intersection Improvements on Route 16 (Main Street), from Water Street to the Hopedale T.L.	84 tons of CO ₂ reduced
607754	Milton	Intersection & Signal Improvements at Granite Avenue & Squantum Street	To be determined
607763	Milton	Intersection & Signal Improvements at 2 Locations: SR 138 (Blue Hill Avenue) at Atherton Street & Bradlee Road and SR 138 (Blue Hill Avenue) at Milton Street & Dollar Lane	To be determined
605034	Natick	Reconstruction of Route 27 (North Main Street), from North Avenue to the Wayland Town Line	74 tons of CO ₂ reduced
606635	Newton & Needham	Reconstruction of Highland Avenue, Needham Street & Charles River Bridge, from Webster Street to Route 9	312 tons of CO ₂ reduced
608052	Norwood	Intersection and Traffic Signal Improvements at Providence Highway (Route 1) and Morse Street	To be determined
604989	Southborough	Reconstruction of Main Street (Route 30), from Sears Road to Park Street	101 tons of CO ₂ reduced
602165	Stoneham	Signal & Intersection Improvements at Route 28/North Street	154 tons of CO ₂ reduced
607761	Swampscott	Intersection & Signal Improvements at SR 1A (Paradise Road) at Swampscott Mall	To be determined
602261	Walpole	Reconstruction on Route 1A (Main Street), from the Norwood Town Line to Route 27	94 tons of CO ₂ reduced

1572	MBTA	Red Line-Blue Line Connector Design	No CO ₂ impact
1570	Somerville and Cambridge	Green Line Extension Project - Extension to College Avenue with the Union Square Spur	Model
1569	Somerville and Medford	Green Line Extension Project (Phase II), College Avenue to Mystic Valley Parkway/Route 16	Model

TABLE C-2: Greenhouse Gas Regional Transit Project Tracking

Regional Transit Authority	Project Description	Analysis of GHG Impact
MBTA	STATIONS & FACILITIES	Assumed nominal reduction in CO ₂ from transit infrastructure
MBTA	BRIDGES & TUNNELS	No CO ₂ impact
МВТА	PREVENTATIVE MAINTENANCE	No CO ₂ impact
MBTA	SYSTEM UPGRADES	To be determined
САТА	PREVENTATIVE MAINTENANCE	To be determined
САТА	EQUIPMENT AND FACILITIES	No CO ₂ impact
MWRTA	ADA PARATRANSIT	To be determined
MWRTA	EQUIPMENT AND FACILITIES	No CO ₂ impact

This appendix lists information about the status of roadway projects in the federal fiscal year 2015 element of the FFYs 2015–18 TIP.

TABLE D-1 Advanced Construction Projects

Project Number	Project Description	District	Funding Source(s)
607338	Gloucester- Bridge Preservation, G-05-017, Route 128 over Annisquam River (Phase II)	4	BR-AC
600703	Lexington- Bridge Replacement, L-10-009, Route 2 (EB & WB) over Route I-95 (Route 128)	4	BR-AC
603711	Needham- Wellesley- Rehab/Replacement of 6 Bridges on I-95/Route 128: N-04-020, N-04-021, N-04-022, N-04-026, N-04-027 & W-13-023 (Add-A-Lane - Contract V)	6	BR-AC

TABLE D-2 Projects Advertised in FFY 2015

Project Number	Project Description	District	Funding Source(s)
607174	Chelsea- Revere – Resurfacing & Related Work on Route 1	6	NHPP
607700	Lexington- Woburn – District 4 Highway Lighting Branch Circuit Re-Cabling from Six Lighting Load Centers Along Route I-95 (128)	4	STP
607891	Beverly – Resurfacing & Related Work on Route 128	4	NHPP

TABLE D-2 (CONTINUED) Projects Advertised in FFY 2015

Project Number	Project Description	District	Funding Source(s)
605883	Dedham – Bridge Replacement, D-05-003 (33K), Needham Street over Great Ditch	6	NHPP
604796	Dedham – Bridge Replacement, D-05-033, Providence Highway over Mother Brook	6	NHPP
606997	Braintree-Mansfield-Milton-Weymouth- Stormwater Retrofits on I-93, I-495, I-195, Route 3/18	6	STP-TE
607839	Medford- Medford Clippership Drive Park Construction	4	Sec 125
606889	Boston- Improvements Along Gainsborough and St. Botolph Streets	6	ТІ

TABLE D-3 Projects Expected to be Advertised in FFY 2015

Project Number	Project Description	District	Funding Source(s)
608019	Boston- Advanced Utility Relocations for Bridge B-16-237, Massachusetts Avenue (Route 2A) over Commonwealth Avenue	6	NHPP
604531	Acton & Maynard- Assabet River Rail Trail	3	CMAQ, TAP
605657	Medway- Reconstruction on Route 109, from Holliston Street to 100 Feet West of Highland Street	3	CMAQ, HSIP, TAP
607273	Franklin- Bridge Demolition, F-08-005, Old State Route 140 over MBTA/CSX & New Pedestrian Bridge Construction	3	NHPP
604652	Winchester, Stoneham- Tri-Community Bikeway	4	CMAQ, TAP

TABLE D-3 (CONTINUED) Projects Expected to be Advertised in FFY 2015

Project Number	Project Description	District	Funding Source(s)
605146	Salem- Reconstruction on Canal Street, from Washington Street & Mill Street to Loring Avenue & Jefferson Avenue	4	CMAQ, HSIP
606284	Boston- Improvements to Commonwealth Avenue, from Amory Street to Alcorn Street	6	CMAQ, TAP
607920	Milton- Safe Routes to School (Grover Elementary School)	6	TAP
607892	Somerville- Safe Routes to School (Healey School)	4	TAP
606146	Canton- Norwood- Westwood- Ramp Construction On I-95 (NB) & Improvements on Canton Street/Dedham Street, includes Replacement of C-02-034, Rehab of C-02-024, C-02-002=N-25-016=W-31-002 & 5 Signalized Intersections	5	NFA
607209	Somerville- Reconstruction of Beacon Street, from Oxford Street to Cambridge C.L.	4	HPP
600867	Boston- Bridge Replacement, B-16-237, Massachusetts Avenue (Route 2A) over Commonwealth Avenue	6	NHPP

TABLE D-4 Projects That Will Be Advertised in a Future TIP Element

Project Number	Project Description	District	Funding Source(s)
603008	Woburn- Bridge Replacement, W-43-003, Salem Street over MBTA	4	NHPP
606134	Boston- Traffic Signal Improvements on Blue Hill Avenue and Warren Street	6	HPP

TABLE D-5 Projects That Were Removed From the TIP

Project Number	Project Description	District	Funding Source(s)
604428	Chelsea- Bridge Replacement, C-09-001, Washington Avenue over the MBTA and B&M Railroad	6	BR

This appendix lists information about the status of transit projects programmed on previous elements of the TIP.

Funds Programmed: Total funds programmed in the TIP Pending: Application being prepared to be submitted to FTA Completed: Application submitted to FTA Approved: Funds executed

TABLE E-1 FFY 2014 Transit Projects - Section 5307

This appendix contains a table of summarized public comments on the draft FFYs 2016-20 TIP received during the public comment period.

1

APPENDIX F: Summary of Public Comments on the Draft FFYs 2016-20 TIP

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Bike Racks on MBTA Buses	Request	Somerville resident: Joel N. Weber, II	Requests funding and installation of bike racks on MBTA buses in the near future.
Bruce Freeman Rail Trail	Oppose	Sudbury resident: Daniel A. DePompei	Opposes inclusion of funding for the Bruce Freeman Rail Trail in the FFYs 2016-20 TIP. Expresses concern that the project does not comply with local environmental bylaws and storm water regulations. Raises questions whether the project triggers Massachusetts Environmental Policy Act (MEPA) thresholds and whether MassDOT design requirements supersede local environmental bylaws and storm water regulations. Notes that the project right-of-way is located in a wetland, and proposes that MassDOT consider alternative alignments or alternate design standards for the trail.
Bruce Freeman Rail Trail, Phase 2B (Acton and Concord)	Support	 Municipal: Acton Board of Selectmen, Concord Board of Selectmen Organizations: Friends of the Bruce Freeman Rail Trail, CrossTown Connect Transportation Management Association (TMA) Acton resident: Robert Sekuler Concord resident: Robert Armstrong Medford resident: Ken Krause Framingham residents: William Hanson, Michaela Hardimon Westford resident: Katie Sawrey Others: Nathaniel Bates, Louis Hills, David Hutcheson, Nancy Savage, Anne Anderson, Kevin Neijstrom, Barbara Pike, Joe Robb, Peggy Wagelin, Brad Wargelin, Alan Whitney 	Support inclusion of the Bruce Freeman Rail Trail, Phase 2B in the FFYs 2016- 20 TIP. State that Phase 2B is a critical link in connecting Acton and Concord, providing safe crossing over Route 2 for pedestrians and cyclists.
Bruce Freeman Rail Trail, Phase 2B (Acton and Concord)	Request	Municipal: Acton Board of Selectmen, Concord Board of Selectmen Organization: Friends of the Bruce Freeman Rail Trail Acton resident: Robert Sekuler Concord resident: Robert Armstrong Framingham resident: Michaela Hardimon Others: Louis Hill, Anne Anderson, Kevin Neijstrom, Barbara Pike, Joe Robb, Peggy Wagelin, Brad Wargelin, Alan Whitney	Request that the MPO move Phase 2B from FFY 2018 back to FFY 2017. Issues raised include prior delays, readiness of the design, and the importance of connecting commuters to the West Concord MBTA station.

APPENDIX F: Summary of Public Comments on the Draft FFYs 2016-20 TIP

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Bruce Freeman Rail Trail, Phase 2C (Concord)	Support	Organization: Friends of the Bruce Freeman Rail Trail, CrossTown Connect TMA Acton resident: Robert Sekuler Concord resident: Robert Armstrong Medford resident: Ken Krause Framingham residents: William Hanson, Michaela Hardimon Westford resident: Katie Sawrey Others: Nathaniel Bates, Louis Hills, David Hutcheson, Nancy Savage, Anne Anderson, Kevin Neijstrom, Barbara Pike, Joe Robb, Peggy Wagelin, Brad Wargelin, Alan Whitney	Support inclusion of the Bruce Freeman Rail Trail, Phase 2C in the FFYs 2016- 20 TIP.
Bruce Freeman Rail Trail, Phase 2D (Sudbury)	Support	Leonard Simon, Sudbury Board of Selectmen member	Support inclusion of the Bruce Freeman Rail Trail, Phase 2D in the FFYs 2016- 20 TIP. State that the Sudbury Town Meeting, Board of Selectmen, Community Preservation Committee, and the Capital Improvement Advisory Committee have voted in support of the BFRT. Note that the 25% design study began in November 2014, and should be completed by February 2016.
Cochituate Rail Trail (Framingham and Natick)	Support	Framingham resident: William Hanson Town of Natick: Board of Selectmen	Support inclusion of the Cochituate Rail Trail in Framingham and Natick in the FFYs 2016-20 TIP. Benefits addressed include the support of economic development and quality of life initiatives.
Community Path Extension	Support	Organizations: Friends of the Community Path, GLX Design Working and Construction Group, Somerville Transportation Equity Partnership, Mystic Valley Task Force Medford residents: Diane Andronica, Patrick Bibbins Somerville residents: Chris Gunadi, Karen Molloy, Julia Petipas, Alan Moore, Patrick Smith Belmont resident: William Messenger Cambridge resident: John MacDougall Others: Kevin Donovan, Linda Lintz, Michelle Moon, Ellin Reisner, Matthew Danish	Support inclusion of the Community Path Extension in the FFYs 2016-20 TIP.

APPENDIX F: Summary of Public Comments on the Draft FFYs 2016-20 TIP

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Environmental Impacts	Request	Organizations: Somerville Transportation Equity Partnership (STEP) and Mystic Valley Task Force (MVTF)	Express hope that the MPO will soon be able to more fully recognize the serious health impacts of transportation air pollution and noise on nearby residents, workers and students. Suggest including black carbon from diesel in climate pollutant inventories, as California already does, and in transportation conformity analyses.
Gateway East (Brookline)	Support	Framingham resident: William Hanson Other: Matthew Danish	Support inclusion of the Gateway East project in Brookline in the FFYs 2016-20 TIP.
Green Line Extension (Phase I & II)	Support	Legislative: State Senator Patricia D. Jehlen; State Representatives Christine P. Barber, Sean Garballey, Denise Provost, and Timothy J. Toomey. Jr. Municipal: Michael McGlynn, Mayor of Medford Organization: Conservation Law Foundation Medford resident and Mayoral Candidate: Stephanie Muccini Burke	Support inclusion of the Green Line Extension, Phases I & II, in the FFYs 2016- 20 TIP. Benefits raised by commenters include fostering mixed-use development, reducing VMT and GHG emissions, contributing to economic development, and reaching populations underserved by public transit.
Green Line Extension (Phase I)	Support	Organizations: Sierra Club, Somerville Transportation Equity Partnership, Mystic Valley Task Force, Tufts University, GLX Design Working and Construction Group, Friends of the Community Path Somerville residents: Andrew Wiley, Julia Petipas, Alan Moore, Greg Brodsky, Karen Molloy, Chris Gunadi, Patrick Smith Boston resident: David Van Stone Medford residents: Elisabeth Bayle, Kevin Cuddeback, Ken Krause, Debra Agliano, Lisa Hodsdon, Peter Micheli, Dina Jacobs, Patrick Bibbins, John Roland Elliott, Diane Andronica Belmont resident: Jeremy Freudberg Cambridge residents: John MacDougall, Mark Jaquith Arlington resident: Lenny Goldstein Flagstaff, AZ resident: Joanne Auskern West Hartford, CT resident: Fran Altvater Others: Kevin Donovan, Linda Lintz, Michelle Moon, Jonah Petri, Ellin Reisner, Matthew Danish, Richard A. Andre, M.A. Jensen, Maura McEnaney	Support inclusion of the Green Line Extension, Phase I, in the FFYs 2016-20 TIP. State that the project will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality.
PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
---------------------------------------	--------------------------------	---	---
Green Line Extension (Phase II)	Support	Cambridge residents: Rob Chapman, Joshua Goldman, Reetika Joshi, Tami Kaplan, Kevin Buckley, Daniel Cooney, Tony Yang, John MacDougall, Mark Jaquith Arlington residents: Lisa McCarty, Hank VanZile, Jessica Rosehill, Pete Gast, Amy Swift, Rachel Hamilton, Lenny Goldstein Brookline residents: Jose Roman, Adam Shipley Woburn residents: Jose Roman, Adam Shipley Woburn residents: Anne Michelle Lowe, Jeremy Freudberg Quincy residents: Deborah M. Cooper, Chadderton Odwazny Boston residents: Andrew MacKay, Adam Nichols, Chris Schwartz, Rachel Bennett, David Van Stone Revere resident: August P. Blake Chelsea resident: Brian S. Arsenault Malden resident: Sean Conrad Everett resident: Miles Blackwood Robinson Lynn resident: William Messenger	Support inclusion of the Green Line Extension, Phase II, in the FFYs 2016-20 TIP. State that the Route 16 station will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Green Line Extension (Phase II)	Support	Medford residents: Michael Bernstein, Roberta Cameron, Doug Carr, Joanna Chipman, Erin Dalbec, Marietta DeFini, James DeFini, Anna Ferrentino, Douglas Grey, Elliot Jokelson, Merri Jones, Theresa Kelliher, Mike Korcynski, Bruce Kulik, Sara Landry, Elizabeth Langosy, Miriam Leigh, Matthew Mahowald, Hank Peirce, Katrin Peterson, Elijah Plymesser, Stephanie Rossi, Laurel Siegel, Michael Silvia, Amy Haas, Karl Haas, Ashlee Haslett, Gracelaw Simmons, Gauri Bhide, Jason Cluggish, Patricia Michelle Holcomb, Laurel Ruma, Elizabeth Bolton, Ikuko Otsuka, Noah Williams, Matthew Alford, Kristopher Hahn, Ben Refah, Jeff Kaufman, Thomas W. Lincoln, William Cunningham, Maria Daniels, Galya Traub, Robert Breznak, Bruce Pennypacker, Amy Castonguay, Evan Sullivan, Lijian Zhou, Jinesh Bhed, Elisabeth Bayle, Kevin Cuddeback, Ken Krause, Debra Agliano, Lisa Hodsdon, Peter Micheli, Dina Jacobs, Patrick Bibbins, John Roland Elliott, Neil Silverman, Diane Andronica	Support inclusion of the Green Line Extension, Phase II, in the FFYs 2016-20 TIP. State that the Route 16 station will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality.
Green Line Extension (Phase II)	Support	Somerville residents: Kaitlynn Anderson, Elliot Borenstein, Leah Bloom, Kassidy Helfant, Colin Roald, Ry Strohm-Herman, John Teixeira, John Kraemer, David Churella, Antoine Vo, Chris McCarthy, John Wiesemann, Andrew Kiritsy, Tori Cook, Jared Razzano, Brandon Hanks, Benjamin Tucker, Andrew Wiley, Julia Petipas, Pratham Joshi, Alan Moore, Greg Brodsky, Karen Molloy, Chris Gunadi	Support inclusion of the Green Line Extension, Phase II, in the FFYs 2016-20 TIP. State that the Route 16 station will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality.
Green Line Extension (Phase II)	Support	Flagstaff, AZ resident: Joanne Auskern West Hartford, CT resident: Fran Alvater Swarthmore, PA resident: Jim Moskowitz Others: James Scheffler, Alexander Cox, Patrick Knight, Edward Pyne, John Pellegrino, Sean Kerins, Alex Measures, Andrew Hannon, Kevin Donovan, Linda Lintz, Michelle Moon, Jonah Petri, Ellin Reisner, Matthew Danish, Richard A. Andre, M.A. Jensen, Maura McEnaney	Support inclusion of the Green Line Extension, Phase II, in the FFYs 2016-20 TIP. State that the Route 16 station will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Green Line Extension (Phase II)	Support	Organizations: Sierra Club, Somerville Transportation Equity Partnership, Mystic Valley Task Force, Tufts University, GLX Design Working and Construction Group, Friends of the Community Path	Support inclusion of the Green Line Extension, Phase II, in the FFYs 2016-20 TIP. State that the Route 16 station will provide thousands of residents with better access to work, education, and health care, and social activities, in addition to improving air quality
GreenDOT Policy Goals	Support	Medford resident: Lois Grossman	Supports the GreenDOT policy goals to reduce GHG emissions, promote the healthy transportation modes of walking, bicycling, and taking public transit, and support smart-growth development in the FFYs 2016-20 TIP.
Greenhouse Gas (GHG) Methodology	Request	Sudbury resident: Pat Brown	Requests that the methodology for estimating the CO2 impact of projects be included in the TIP, including data, assumptions, and supporting measures. States that the CO2 impacts do not distinguish between transportation and recreation usage, which makes it difficult to know if the project is removing traffic from the roadways.
Intersection Improvements at Derby Street, Whiting Street, and Gardner Street (Hingham)		Legislative: State Representative Garrett J. Bradley	Supports inclusion of Intersection Improvements at Derby Street, Whiting Street, and Gardner Street in the FFYs 2016-20 TIP. States improved signalization will allow for emergency vehicle pre-emption and improved safety measures for vehicles and pedestrians. Notes that 34 accidents occurred at the intersection between 2007-2009, and a pedestrian phase traffic signal is not present despite the presence of sidewalks, pedestrian ramps, and crosswalks. Adds that Hingham officials consider the intersection to be the most dangerous within town limits.
Intersection Improvements at Middle Street, Libbey Industrial Parkway, and Tara Drive (Weymouth)	Support	Organization: Foxrock Properties	Support inclusion of Intersection Improvements at Middle Street, Libbey Industrial Parkway, and Tara Drive in the FFYs 2016-20 TIP. State that Libbey Industrial Park has medical and office uses, and the intersection of Libbey Industrial Parkway and Middle Street is difficult to navigate for both patients and workers. State this is a critical project for Weymouth which will help spur development in the area.
Intersection Improvements at Route 111 and Route 27/ Kelly's Corner (Acton)	Request	CrossTown Connect TMA	Support future TIP funding for Intersection Improvements at Route 111 and Route 27/ Kelly's Corner in Acton.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Intersection Improvements at Route 20 & Landham Road (Sudbury)	Request	CrossTown Connect TMA	Support future TIP funding for Intersection Improvements at Route 20 & Landham Road in Sudbury.
MBTA Infrastructure	Support	Medford resident: Ken Krause Other: Matthew Danish	Support funding MBTA systems upgrades, bridge and tunnel upgrades, and preventive maintenance, accessibility improvements, and state-of-good repair.
Medford Clippership Linear Park and Bikeway	Support	Medford resident: Kevin Cuddeback	Supports inclusion of the Medford Clippership Linear Park and Bikeway in the FFYs 2016-20 TIP.
MetroWest area priority projects	Support/ Request	Organization: 495/MetroWest Partnership	Express ongoing support for MetroWest projects programmed in the FFYs 2016-20 TIP. Reiterate support for approximately 35 MetroWest projects that are listed in the MPO's Universe of Projects due to limited transportation funding. Note that four of those projects in the MPO's Universe of Projects are also identified in the 495/MetroWest Region's 2014 Top Ten Transportation Nightmares. Commend the MPO for providing a reliable funding stream to the MetroWest RTA and support the capital projects included in the TIP for the MWRTA to continue and expand their service.
Multi-use Path Construction on New Fenway (Boston)	Support	Matthew Danish	Supports inclusion of Multi-use Path Construction on New Fenway in Boston in the FFYs 2016-20 TIP.
Performance- based Planning	Request	Susan Ringler, Matthew Danish	Request that the MPO use performance metrics that are based around the experience of people more so than machines. Recommend using "people-hours" rather than "vehicle-hours" as an example.
Project Prioritization - Economic Benefit	Request	Organization: 495/MetroWest Partnership	Encourage the MPO to consider the economic benefit of projects and recommend that the scoring system be based on a percentage of possible points. State that this may allow for communities without existing transit infrastructure to compare fairly with urban communities.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Project Prioritization - New Bicycle and Pedestrian Projects	Request	Sudbury resident: Pat Brown	Expresses concern with the TIP project evaluation criteria for new bicycle and pedestrian projects. States that new multi-use paths should not be eligible for points under the Maintenance, Modernization, and Efficiency category given that they are new construction.
Project Prioritization - Regional Equity	Request	Organization: 495/MetroWest Partnership	Express concern that the project scoring system favors dense urban communities and urge the MPO to consider regional equity when scoring projects.
Project Prioritization	Support / Request	Regional Transportation Advisory Council	Support the MPO's project selection process, and finds the recommended set of projects reasonable. State that the number of deserving projects far outweighs the available funding. Suggest that the MPO undertake a sensitivity analysis of its criteria rating point systems to see how changes in the weighting and scoring system change the outcome of project selection. Suggest that the MPO continue to improve its data and analytical methods to assign ratings based on quantitative measures of impact and benefit as much as possible.
Reconstruction and Related Work on Derby Street (Hingham)	Support	Legislative: State Representative Garrett J. Bradley	Supports inclusion of the Reconstruction of Derby Street in the FFYs 2016-20 TIP. States that Derby Street is heavily travelled, congested, and in critical need of repair. Adds that the installation of new traffic signals, increasing the roadway width, and adding a contiguous sidewalk will increase bicycle and pedestrian access in the area. New traffic signals will also allow for emergency vehicle pre-emption, and queue detectors will be installed at the Route 3 off-ramps to assist with traffic flow.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Reconstruction and Related Work on Derby Street (Hingham)	Oppose	Hingham residents: T.J. Jennings, Paul Burke Weymouth resident: Francis D. Simmons Others: Susan Camenker, David DeGiorgi, Eric Dresser, Jeanne Duffy, Hugh Duffy, Jon Whiting, Sandi Gilardi, Ruth Nace, Marlaena Auriemma, Louise Birtwell, Ambrose Birtwell, Kevin Bliss, Deborah Caplice, Lisa Haapaoja, D. O'Donnell, Jean Zaleski, Barbara Levy, Edward Walter, Jane Tondorf, Sharon Wreston, Daniel Barbuto, Patrick Green, Meredith Holbrook, Susan McCarthy, Janet Stone, Delia Strohm, Faith Ramstroom, Ashley Robinson, Edmund D. Henley, Christinie Jordan, Gail Otis, Unidentified (2)	Oppose inclusion of the Reconstruction of Derby Street in the FFYs 2016-20 TIP. State that Derby Street has been under some form of construction for several years, causing disruption to residents. Add that the current capacity of the roadway is underutilized, and further reconstruction would continue to disrupt residents of Hingham and surrounding neighborhoods while not guaranteeing any significant improvements. Other issues raised include safety concerns, over-signalization, and frequent congestion.
Reconstruction of Boylston Street (Boston)	Support	Matthew Danish	Supports inclusion of Reconstruction of Boylston Street in Boston in the FFYs 2016-20 TIP.
Reconstruction of Highland Avenue, Needham Street and the Charles River Bridge (Newton and Needham)	Support	Legislative: State Senators Michael F. Rush and Richard J. Ross; State Representative Denise C. Garlick Needham residents: Ruth M. Aaron, Yana Brodskiy, David Kaplan Wellesley resident: Mark Fraga Others: Ethel Sinofksy, Claudia Eden, Ed Gardner, Catharine Kelley, Martin Waters, Mitch Coddington, Michele W. Blair, David Buck, Deb Jacob, Roy Barr, Susana Brown, Seymour Salett, John Patrick Foley, Peter Yaffe, Peter H. Smith, James Curtin, Paul Glynn, Michael Baker, Mary R. Baker, Jared Becker, Jim Costa, Chris Cwynar, Jeremy Freid, David A. Gillies, Carol Hughes, Phyllis Kaplowitz, Stanley K. Rogalinski, Carol Russo, Davood Shahin, Donna Stein, Michael Cope, Dave Lawson, Warren Brown, Arnold Zaff, Dale Zaff	Support inclusion of the Highland Avenue/Needham Street Corridor Project in FFY 2018 of the TIP. State that Needham and Newton have been hampered by inadequate infrastructure. The project will benefit economic development in the region, including the N2 Innovation Corridor. Benefits raised by commenters include safety improvements and congestion relief.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Reconstruction of Highland Avenue, Needham Street and the Charles River Bridge (Newton and Needham)	Support	Newton residents: Matt Yospin, Jack Hulburd, Ed Hauben, Candy Gold, Cheryl O'Neil, Frances Godine, Evan Ross, David A. Bunis, Bunny M. Aronson, Carol Schauer, Amy Tierce, Howard Sholkin, David Goodtree, Doug Borg, David G. O'Neil, Lynne D. Sweet, Steffi Aronson Karp, Vanik Petrossian, Sona Petrossian, Stephen Clairmont, Bruce Rogovin, Mark Shuster, Irena Panduku, Dhimitraq Panduku, Sallee Lipshutz, Anne C.S. Kalis, David Kalis, Julia Jenkins, Jennifer Bornstein	Support inclusion of the Highland Avenue/Needham Street Corridor Project in FFY 2018 of the TIP. State that Needham and Newton have been hampered by inadequate infrastructure. The project will benefit economic development in the region, including the N2 Innovation Corridor. Benefits raised by commenters include safety improvements and congestion relief.
Reconstruction of Highland Avenue, Needham Street and the Charles River Bridge (Newton and Needham)	Support	Municipal: Newton Economic Development Commission Organizations: Arthritis Founation, Blue Ribbon Barbecue, Boston College, Braver Wealth Management, William James College, The Bulfinch Group, The Bulfinch Companies, SocialMadeSimple, Needham Housing Authority, Normandy Real Estate Partners, Pinnacle HR Solutions, Realty Consultants, National Lumber, Brier & Ganz LLP, BizTech Coaching, Building 36 Technologies, Needham Children's Center, Wingate Companies, Penzo Consulting, Construction Coordinators, Fresh City/Souper Salad, Law Firm of Schlossberg, Architectural Electronics, Inc. Audio Video Design & Security Design Consultants, Golden Law Center, TripAdvisor, Trefler's, The CCS Companies, FASTSIGNS, Hoye Dentistry, Mentell Retirement Consulting, Needham Business Associates, Newton Upper Falls Area Council, Lizzy's Ice Cream, Bakers' Best Catering, Intrum Corp., Newton-Needham Chamber of Commerce, The Village Bank, Tyrogenex, Chapman Construction/Design, Karyopharm, Paragon Group	Support inclusion of the Highland Avenue/Needham Street Corridor Project in FFY 2018 of the TIP. State that Needham and Newton have been hampered by inadequate infrastructure. Many commenters state they avoid the area during peak hours due to congestion, and that congestion causes harm to business that rely on the corridor. The project will benefit economic development in the region, including the N2 Innovation Corridor.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Reconstruction of Highland Avenue, Needham Street and the Charles River Bridge (Newton and Needham)	Request	Newton resident: Steffi Aronson Karp	Requests that overhead pedestrian crossing ramps be constructed, asking for a minimum of two ramps between Book Fair and TJ Maxx. States that individuals could be hurt attempting to cross Needham Street, and overhead pedestrian crossing ramps would increase safety. Requests that the ramps be aesthetically pleasing.
Reconstruction of Massachusetts Avenue (Lexington)	Support	Town of Lexington: Carl F. Valente, Town Manager; John A. Wilson, Chief of the Lexington Fire Department; Lexington Planning Board, Mark J. Corr, Chief of the Lexington Police Department	Support inclusion of the Reconstruction of Massachusetts Avenue in the FFYs 2016-2020 TIP. Benefits of the project raised by commenters include better accommodation of traffic flow, improved safety for vehicles, cyclists and pedestrians, and signalization allowing for improved emergency response.
Reconstruction of Melnea Cass Boulevard (Boston)	Support	Matthew Danish	Supports inclusion of Reconstruction of Melnea Cass Boulevard in Boston in the FFYs 2016-20 TIP.
Reconstruction of Melnea Cass Boulevard (Boston)	Request	Friends of Melnea Cass Boulevard	Request an update to the project description for Reconstruction of Melnea Cass Boulevard in Boston in the FFYs 2016-20 TIP to eliminate reference to a bus rapid transit (BRT) system within existing right-of-way. State that BRT lanes have been eliminated from the design.
Reconstruction of Montvale Avenue (Woburn)	Support	Medford resident: Ken Krause	Supports funding to reconstruct and widen Montvale Avenue in Woburn from the I-93 interchange to Central Street, including new sidewalks and wheelchair ramps.
Reconstruction of Route 27/North Main Street (Natick)	Support	Town of Natick: Board of Selectmen	Support inclusion of the Reconstruction of Route 27 in the FFYs 2016-20 TIP. State the project will support economic development and quality of life initiatives, and the ability to safely move people through Natick is essential to the Town and Region's continued success. Add that the project will benefit both Natick residents and those who visit the region.
Reconstruction of Rutherford Avenue (Boston)	Support	Organizations: Somerville Transportation Equity Partnership (STEP) and Mystic Valley Task Force (MVTF)	Support inclusion of the Reconstruction of Rutherford Avenue in Boston in the FFYs 2016-20 TIP.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Reconstruction of the I-95/I-93 Interchange (Canton)	Request	Three Rivers Interlocal Council (TRIC)	Request inclusion of Reconstruction of the I-95/I-93 Interchange in Canton in the FFYs 2016-20 TIP. State that if the interchange does not provide an acceptable level of service to businesses, they will move to another location. State that the interchange project has been repeatedly promised over the years by senior public officials acting for the Commonwealth of Massachusetts. State that nullifying these commitments without complete explanation or compelling reasons jeopardizes good faith efforts between communities and private developers.
Reconstruction on Route 1A/Main Street (Walpole)	Support	Organization: TRIC Town of Walpole: James A. Johnson, Town Administrator	Support inclusion of the Reconstruction of Route 1A in the FFYs 2016-20 TIP. Benefits addressed include congestion relief, safety improvements for vehicles and pedestrians, and the support of planned development activities.
Red Line-Blue Line Connector Design	Support	Matthew Danish	Supports inclusion of design for the Red Line-Blue Line Connector in the FFYs 2016-20 TIP.
Rehabilitation of the North Washington Street Bridge (Boston)	Support	Matthew Danish	Supports inclusion of Rehabilitation of the North Washington Street Bridge in Boston in the FFYs 2016-20 TIP.
Resurfacing and Intersection Improvements on Route 16 (Milford)	Support	SouthWest Advisory Planning Committee (SWAP)	Support inclusion of Resurfacing and Intersection Improvements on Route 16 in Milford in the FFYs 2016-20 TIP.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Route 1 Improvement Project (Malden, Saugus and Revere)	Request	Legislative: State Representative RoseLee Vincent Municipal: City of Malden (Mayor Christenson), City of Revere (Mayor Rizzo), and Town of Saugus (Scott Crabtree, Town Manager)	Request that the Commonwealth address the dangerously outmoded and inadequate section of Route 1 from Copeland Circle to Route 99. State virtually all of the northeast section of the state remains in a chokehold with the constriction on this section of Route 1 on a twice daily basis. The communities from the Boston city line to the New Hampshire border are impacted by long commute times and wasted economic opportunity. Propose a three-phase plan to be implemented in sub-steps over a multi-year period: Segment A - Copeland Circle/Route 60 Interchange; Segment B - Lynn Street/Overlook Ridge Boulevard Interchange; Segment C - Route 1/Route 99 Interchange. Request that CTPS and the MPO make this a priority in the TIP and ask that MassDOT Project Selection Advisory Committee meet with chief executives of the three communities and with other key stakeholders to discuss a resolution to this transportation problem, and that their respective legislative delegations be part of this process. Ask that this take place before the next STIP is adopted. Attached previous correspondence to the MPO from the Cities of Malden and Revere and the Town of Saugus detailing the longstanding issues and concerns along the Route 1 corridor.
Route 1 Improvement Project (Malden, Saugus and Revere)	Request	North Shore Alliance for Economic Development (Cities of Salem, Revere, Gloucester, Beverly, Newburyport, Peabody, and Lynn; Towns of Danvers, Essex, Georgetown, Hamilton, Ipswich, Lynnfield, Middleton, Newbury, Salisbury, Saugus, Swampscott, Wenham, Winthop, Rockport, Marblehead, Manchester and Nahant)	Request that MassDOT and MPO reevaluate the Route 1 Improvement project to identify "specific phases" of the project that will address some of the immediate traffic, safety, and environmental concerns that affect communities along the Route 1 corridor and secure funding for the appropriate phase in the FFYs 2016-20 TIP. State that the dangerously outmoded and inadequate section of Route 1 from Copeland Circle to Route 99 causes unbearable traffic back-ups in both directions during rush hour commutes. The communities from the Boston city line to the New Hampshire border are impacted by traffic impacts, and its negative effects on economic opportunities.
Route 85/ Route 62 Rotary Improvements (Hudson)	Request	CrossTown Connect TMA	Support future TIP funding for Route 85/ Route 62 Rotary Improvements in Hudson.

PROJECT(S) / ISSUE(S)	REQUEST/ SUPPORT/ OPPOSE	COMMENTERS	COMMENT
Safe Routes to School	Support	Medford resident: Ken Krause	Supports funding for Safe Routes to School programs in Bedford, Everett, Saugus, Watertown and Weymouth. States that the program helps children safely walk to and from school, improving their health and readiness to learn, and reversing trends in childhood inactivity and obesity.
Signal and Intersection Improvements on Route 135 (Hopkinton)	Support	SWAP	Support inclusion of Signal and Intersection Improvements on Route 135 in Hopkinton in the FFYs 2016-20 TIP.
Traffic Signal Improvements at 10 Locations (Boston)	Support	Boston residents: Jim Brennan, Chris Lengard, Don Vechione Others: Sara LeBlanc, Jared Sulcliff	Support inclusion of the Signal Improvements at 10 Locations in the FFYs 2016- 20 TIP. Specific locations supported include Dudley Street at Shirley Street, intersections along Cummins Highway, and Bennington Street intersections.
Traffic Signal Improvements on Blue Hill Avenue (Boston)	Support	Matthew Danish	Supports inclusion of Traffic Signal Improvements on Blue Hill Avenue in Boston in the FFYs 2016-20 TIP.
Transportation Equity	Request	Organizations: STEP and MVTF	Suggest using the disaggregated TAZ level data to investigate the disparities in transportation neighborhood facilities and in transportation exposures.
Water Taxi Feasibility Study	Support	City of Medford: Michael McGlynn, Mayor	Supports inclusion of the Water Taxi Feasibility Study in Medford in the FFYs 2016-20 TIP to encourage alternative modes of transportation in the City.
