Planning Organization. The MPO is composed of state and regional agencies and authorities, and local governments.

## MBTA Rail Rapid Transit System

## ABSTRACT

This Blue Line report belongs to a multivolume set of reports on the findings of a systemwide survey of Massachusetts Bay Transportation Authority riders that was conducted for the MBTA by the Central Transportation Planning Staff (CTPS) in 2008-09. This survey covers all of the modes operated by the MBTA: bus (including trackless trolley), bus rapid transit, ${ }^{1}$ heavy rail (the Blue, Red, and Orange Lines), light rail (the Green Line and the Mattapan High-Speed Line), commuter rail, and boat. The most recent comparable systemwide passenger survey was conducted during 1993-2000.

The purpose of the systemwide survey was to gather data that are not easily obtained through any other means. The data are used to update the regional travel-demand model that is routinely used by the Boston Region Metropolitan Planning Organization (MPO); they are also available for use by other entities, public and private, as well as interested individuals.

This report comprises 14 chapters and three appendices. In the chapters, data tables and summary text present information about Blue Line travel, including why trips are made, where riders are coming from and going to, how riders get to and from the service, and the stations at which they enter and exit the rapid transit system. Information is also provided on the demographics of Blue Line riders, as well as their automobile ownership, how they pay their fares, and how they perceive the quality of MBTA rapid transit service. The second chapter of this report provides an overview of the results for the entire Blue Line, while each subsequent chapter covers one or more types of data on a station-by-station basis.

## Introduction

### 1.1 THE SYSTEMWIDE SURVEY

This report belongs to a multivolume set of reports on the findings of a systemwide survey of Massachusetts Bay Transportation Authority riders that was conducted for the MBTA by the Central Transportation Planning Staff (CTPS) in 2008-09. This survey covers all of the modes operated by the MBTA: bus (including trackless trolley), heavy rail (the Blue, Red, and Orange Lines), light rail (the Green Line and the Mattapan High-Speed Line), commuter rail, and boat. Reports on bus rapid transit (the Silver Line) are included in the set; their data are from surveys conducted by CTPS in 2005 and 2006. Separate survey instruments were developed for each mode, but the same categories of information were gathered through each.

The purpose of the systemwide survey was to gather data that are not easily obtained through any other means. Some of the data will be used to update the regional travel-demand model that is routinely used by the Boston Region Metropolitan Planning Organization (MPO) to estimate the future impact of projects on the transportation network. In addition, as with past surveys, the data obtained through this survey will be available for use by the MBTA, CTPS, the Massachusetts Department of Transportation, other transportation agencies, academic researchers, consultants, and private citizens.

The most recent comparable systemwide passenger survey was conducted during 1993-2000. Most of the commuter rail system was surveyed in 1993, except for the Old Colony Lines, which were surveyed in 1998. The heavy rail and light rail networks were last surveyed in 1994, and the bus and trackless trolley lines in 1995. Commuter boat and ferry services were surveyed in 2000. The results of this systemwide survey have become outdated.

### 1.2 BLUE LINE SURVEY METHOD

This volume presents the survey results for passengers riding the Blue Line, which, along with the MBTA's other heavy rail lines and its light rail lines, belongs to the rapid transit component of the MBTA system.

The rapid transit survey form, a copy of which may be found in Appendix C,
contained 24 questions (33 questions, including subquestions). The questions were designed to gather data regarding the specific trip each rider was making when he or she received the survey form (such as trip origin, destination, and purpose), as well as demographic data (such as passenger age, gender, income, and ethnicity) and subjective views of the rider regarding service quality. Also, at the end of the survey form, space was provided in which the rider could write comments and suggestions of his or her own choosing.

Survey forms were offered to all riders entering each Blue Line station between 6:00 AM and 3:00 PM on a typical weekday in 2008 or 2009. This distribution strategy was designed to provide approximately $85 \%$ of the weekday riders on the Blue Line with an opportunity to receive a survey form during what would be considered typical travel conditions. ${ }^{1}$ Surveys were not given to riders transferring to the Blue Line at Government Center and State Stations; such riders would have been covered at the station at which they first entered the rapid transit system. Completed survey forms could be returned to the survey distributors or Customer Service Agents in the stations, or could be mailed in postage-free. Also, the riders were informed that they could use an online survey form instead of the paper form.

As in any survey with a response rate of less than $100 \%$, the data that were collected needed to be "expanded." The survey responses from each station were weighted to equal typical boardings during the survey hours using the most recently available ridership figures.

The survey results were entered into a computerized database from which responses to selected combinations of questions can be summarized at any level of aggregation. The particular data tables that have been generated and presented in this volume are ones that will be useful to this report's anticipated users. Other, more specialized tables can be generated if needed.

### 1.3 ORGANIZATION OF DATA IN THIS REPORT

The types of data reported in each chapter are listed below. After Chapter 2’s overview of all of the types of data for the entire Blue Line, each chapter presents a certain type (or set of types) of data by station. Each chapter's data are either for the riders who were entering the rapid transit system at the station where they were surveyed or for those who were exiting the system there.

In each chapter, there is a table or set of tables for each station. The nature of the type (or types) of data presented in the tables is discussed and, if called for, the way in which the tables present the data is explained. In addition, an overview of notable findings is provided.

## Chapter

2 Results for the Blue Line as a Whole: Provides an overview of the results for the Blue Line as a whole.

[^1]3 Trip Purpose, Reasons for Using the MBTA, and Alternative Means: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- Why riders made their trips
- Why riders used the MBTA to make their trips
- What mode or modes each rider used if he or she sometimes made the same trip by means other than the Blue Line

4 Origin Locations and Activities: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- Where riders started their trips (by city or town, or by neighborhood of Boston, Cambridge, Somerville, or Brookline)
- What activities riders were engaged in at those origin locations (for example, work, home, school)

5 Access to the Rapid Transit System: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- What mode riders used to access the Blue Line, such as walking, biking, other transit mode, etc.
- For riders who accessed the Blue Line by any mode other than transferring to the Blue Line from a fixed-route transit service, how long it took them to travel from where their trip began to the station where they boarded the Blue Line
- If riders transferred to the Blue Line from a commuter rail, boat, or fixed-route bus service (MBTA or other), which service they transferred from

6 Exits from the Rapid Transit System: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- The stations at which they exited the rapid transit system

7 Entries to the Rapid Transit System: For each Blue Line station, presents the following data on the riders who were exiting the rapid transit system there:

- The stations at which they entered the rapid transit system (including passengers entering stations on the Red, Orange, or Green Line as well as the Blue Line)

8 Egress from the Rapid Transit System: For each Blue Line station, presents the following data on the riders who were exiting the rapid transit system there:

- How riders completed their trips after leaving the Blue Line
(walk, bike, bus, commuter rail, etc.)
- For riders who completed their trips in any manner other than by transferring to a fixed-route transit service, how long it took them to reach their final destinations after leaving the Blue Line
- For riders who transferred from the Blue Line to a commuter rail, boat, or fixed-route bus service (MBTA or other), which particular route or station they transferred to

9 Destination Locations and Activities: For each Blue Line station, presents the following data on the riders who were exiting the rapid transit system there:

- Where riders ended their trips (by city or town, or by neighborhood of Boston, Cambridge, Somerville, or Brookline)
- What activity riders were going to engage in after completing their trips (for example, work, home, school)

10 Origin-Destination Cross-tabulation: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- Where they began their trips (by city, town, or neighborhood)
- Where they ended their trips (by city, town, or neighborhood)

11 Socioeconomic Characteristics: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- Their age, gender, household income, and ethnicity

12 Usage Rates and Fare Types: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- How frequently riders used the system
- How riders paid their fares
- How the different fare-payment methods were related to how frequently riders used the system

13 Vehicle Availability: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- How many riders had driver's licenses
- How many vehicles riders had in their households
- Whether riders had access to the use of household vehicles for the trips they were making when surveyed
- The number of vehicles owned per capita for Blue Line riders

14 Service Quality: For each Blue Line station, presents the following data on the riders who were entering the rapid transit system there:

- Riders’ perceptions regarding several aspects of MBTA service quality.

In Chapters 2-14, the data for Government Center and State Stations are only about Blue Line riders entering or exiting at those stations. However, Appendix B contains selected data for these two transfer stations that include all riders: Blue and Green Line riders at Government Center and Blue and Orange Line riders at State. The tables presenting these data are replicated in the Green and Orange Line volumes as well.

It should be noted that, throughout this volume, Blue Line stations are sometimes treated in two categories: downtown stations and non-downtown stations. Moving inbound towards Boston, the eight non-downtown stations are Wonderland, Revere Beach, Beachmont, Suffolk Downs, Orient Heights, Wood Island, Airport, and Maverick. The four downtown stations are Aquarium, State, Government Center, and Bowdoin.

## Results for the Blue Line as a Whole

This chapter provides an overview of the survey results for the Blue Line as a whole and highlights some of the more important findings. The tables and text in this chapter summarize the survey statistics for all Blue Line stations, while each of the subsequent chapters presents a particular category (or set of categories) of data on a station-by-station basis. Explanations of the nature of the data categories are provided in the subsequent chapters. In those chapters, the data tables present, for each station, findings either on the riders who entered the rapid transit system at that station or on those who exited the system there.
Each of the following numbered sections except 2.13 corresponds to one or more tables that are located at the end of this chapter.

### 2.1 TRIP PURPOSE, REASONS FOR USING THE MBTA, AND ALTERNATIVE MEANS

Trip Purpose Nearly $90 \%$ of the trips made on the Blue Line were in one of the seven categories that are "home-based" (that is, home was either the origin or destination of the trip). Most of these ( $72 \%$ of all Blue Line trips) were "home-based work" (either heading to work from home or to home from work). The other six types of home-based trips were distributed fairly evenly among those categories.
"Work-based" trips (those with one end at work and the other end not at home) accounted for slightly less than 8\% of all Blue Line trips. Combining those trips with home-based work trips and home-based work-related trips shows that $82 \%$ of all trips have work or a work-related activity as one end of the trip.
Reasons for Using the MBTA Respondents could check as many reasons as applied from a list of eight, and a write-in line was provided for other reasons. The most common reason checked for using the Blue Line was "convenience" (62\%). The next-most common responses were automobile-related: "avoid driving /traffic" (53\%) and "parking cost/availability" (52\%). The least common reason was "only transportation available" (24\%).

Alternative Means When asked whether they made the same trip by other means on days that they did not use the Blue Line, $38 \%$ of the respondents
answered "yes." Of those riders, most (61\%) indicated that they drove alone. The next-most commonly selected travel mode options were "carpool/vanpool" and "other MBTA service" (approximately 16\% each), while $17 \%$ of respondents selected the "other" category. (The latter respondents wrote in alternatives that included walking, taking a taxi, and being driven by someone else.) Some respondents reported more than one alternative mode.

### 2.2 ORIGIN LOCATIONS AND ACTIVITIES

Approximately $66 \%$ of the origin locations of riders starting a rapid transit trip on the Blue Line were places directly served by that line: East Boston and Logan Airport (39\%), Revere (17\%), and the Government Center, Financial/Retail, and Waterfront neighborhoods of downtown Boston (10\%). The origins stretched through the North Shore up to Lynn, Marblehead, Salem, and beyond. Because most of the respondents were heading towards downtown Boston during the time the survey was handed out, the non-downtown stations are more prominently represented in the origin data.

The most common "activity" before boarding the Blue Line was "home." Looking at the responses by origin location: for the non-downtown origins, $87 \%$ to $100 \%$ of the responses were "home." For the downtown origins there was a much lower "home" percentage and a "work" percentage ranging from $30 \%$ to $60 \%$. No riders originating from the Financial/Retail district reported that they were coming from home.

### 2.3 ACCESS TO THE RAPID TRANSIT SYSTEM

The most common mode of access to the Blue Line as a whole was walking, which accounted for $53 \%$ of the trips. Among passengers entering at downtown Boston stations, $81 \%$ walked to them. The next-most common access modes to these stations were MBTA bus (7\%), boat (4\%), and commuter rail (3\%) Among passengers entering at non-downtown Blue Line stations, $48 \%$ walked. The next-most common modes were driving (26\%), transferring from bus (18\%), and being dropped off (7\%). Driving was especially high due to the large percentage of respondents who drove to Wonderland. Private transportation modes (that is, any means other than using a fixed-route transit service) accounted for $82 \%$ of all access trips.

Overall, people who walked to the transit station made the shortest trips (8 minutes on average). People who were dropped off had the second-lowest average access time ( 12 minutes), and riders who drove themselves had the longest travel times ( 18 minutes). Less than $10 \%$ of the respondents who drove made trips longer than 30 minutes to access the Blue Line.

There are no direct connections with commuter rail on the Blue Line. Passengers who transferred from commuter rail did so either by using an intermediate rapid transit link or by walking from North Station or South Station. Bus transfers were much more common overall. Stations with significant numbers of transfers from bus to the Blue Line were Wonderland,

Orient Heights, Airport, Maverick, and State.

### 2.4 EXITS FROM THE RAPID TRANSIT SYSTEM

People who entered the rapid transit system along the Blue Line most often also exited the system at a Blue Line station (63\%). ${ }^{1}$ By far the most common exit station for passengers who entered at a Blue Line station was State, at 20\%. After the Blue Line, the next-most common line from which Blue Line entry riders left the system was the Green Line, with $19 \%$ of the exits; most of these occurred in the Central Subway. ${ }^{2}$ The remainder of the exits were split almost evenly between the Orange (9\%) and Red (8\%) Lines. Riders who began their transit trips on the Blue Line had to make two transfers to exit the system at destinations along the Red Line. Nevertheless, over 2,100 people made such trips during the survey hours on a composite weekday.

### 2.5 ENTRIES TO THE RAPID TRANSIT SYSTEM

Of the people exiting the rapid transit system at Blue Line stations during the survey periods, $80 \%$ had also entered the system at Blue Line stations. ${ }^{3}$ The Blue Line stations with the highest percentages of entries were Wonderland (16\%) and Maverick (15\%).

Blue Line exit riders also included 8\% who had entered on the Green Line and $7 \%$ who had entered on the Orange Line. Only 5\% made a double transfer from the Red Line. The non-Blue Line stations at which the highest percentages of Blue Line exit riders entered the rapid transit system were Lechmere, Copley, and Ruggles (about 1\% each).

### 2.6 EGRESS FROM THE RAPID TRANSIT SYSTEM

The most common Blue Line egress mode (81\%) was walking directly from the station to the destination of the trip. (Among those exiting at downtown stations, the figure was $95 \%$, versus $52 \%$ at non-downtown stations). The nextmost common egress modes were driving ( $6 \%$ overall, $17 \%$ outside downtown) and transferring to an MBTA bus (4\%) or "other" bus (6\%). Routes 712 and 713 from Orient Heights to Point Shirley in Winthrop accounted for most of the MBTA bus trips (these routes are operated by Paul Revere Transportation), and the Massport airport shuttle accounted for almost all of the "other" bus trips.
People who drove from the Blue Line to their destinations tended to make longer egress trips ( 20 minutes) than those who walked ( 7 minutes) or those who were picked up (11 minutes). The overall average egress-trip length for

[^2]the Blue Line was 8 minutes, and the average trip length for each type of egress trip was similar to the average length of the same type of access trip.

### 2.7 DESTINATION LOCATIONS AND ACTIVITIES

More than half of the people exiting the rapid transit system from a Blue Line station during the survey period were destined for downtown Boston. The Financial/Retail District was the final destination of $25 \%$ of the respondents, and Government Center of 23\%. The most common Blue Line exit destinations outside of downtown Boston were East Boston (12\%), Logan Airport (8\%), and Revere (6\%). The balance of the trips were spread among other downtown neighborhoods and other cities and towns mostly northeast of Boston.

The most common "activity" to which riders were destined at the downtown neighborhoods was "work," accounting for $83 \%$ of these trips. The secondmost common destination activity overall was "home," representing people returning from non-work trips or people whose workdays ended before 3:00 PM. Almost all of these were to non-downtown destinations.

Locations where home accounted for the highest percentages of destination activities were Winthrop (89\%), Lynn (76\%), Revere (51\%), and East Boston (49\%). A significant number of people traveling to Airport Station (30\%) responded "other," with about half of these indicating that they were catching flights or meeting arriving airline passengers.

### 2.8 ORIGIN-DESTINATION CROSS-TABULATION

The most common origin-destination pair for passengers entering at a Blue Line station was East Boston to the Financial/Retail District (7\%). The nextmost common pairs were East Boston to Government Center (7\%) and Revere to the Financial/Retail District (4\%).

### 2.9 SOCIOECONOMIC CHARACTERISTICS

Over $80 \%$ of the riders were between the ages of 25 and $64,9 \%$ were college age (19-24), and $8 \%$ were over the age of 65 . Only $1 \%$ of the respondents were under the age of 19. Comparisons with fare data indicate that the latter group is usually under-represented in MBTA passenger surveys.

Women made up over half of Blue Line ridership (57\%), while men accounted for $43 \%$, and less than $1 \%$ of riders identified themselves as transgender.

More than half the riders reported household incomes greater than \$60,000. The single most common income bracket selected was " $\$ 100,000$ or more." Possible explanations for this are that the question's check-off choices did not include enough higher income ranges for 2008-09 incomes ${ }^{4}$ or that people may have (intentionally or unintentionally) inflated their incomes in their answers.

[^3]This question was left blank by many people. The average household size across the entire Blue Line was 2.43, with respondents boarding at downtown stations reporting lower average household sizes.

The majority of Blue Line riders self-identified themselves as white (78\%). The next-most common races were black or African-American (7\%) and Asian (5\%). Nine percent of respondents chose "other," which called for writing something in; many wrote in "Hispanic." On a separate question, which asked riders if they were "Hispanic/Latino," close to $16 \%$ of the respondents answered "yes."

### 2.10 USAGE RATES AND FARE TYPES

Just over half (52\%) of those surveyed indicated that they used the Blue Line five days per week, and another $23 \%$ used the line six or seven days per week. Less than $6 \%$ of the riders reported that they used the Blue Line less than one day per week.

The largest percentage of the riders who used the Blue Line on the weekend used it occasionally on both Saturday and Sunday (46\%), and 16\% used it regularly on both Saturday and Sunday. Approximately 30\% of the riders responded "not at all" to either the Saturday usage question, the Sunday usage question, or both.

The majority (60\%) of the Blue Line riders paid their fares using a monthly pass, which they used five days per week on average. Approximately $28 \%$ of riders paid by the ride, with $24 \%$ using CharlieCards and $4 \%$ using CharlieTickets. It is not surprising that many more riders who paid by the ride used the CharlieCard, as single-ride CharlieTicket users pay a surcharge.

### 2.11 VEHICLE AVAILABILITY

Most Blue Line riders (84\%) were licensed to drive, and 76\% lived in households with at least one vehicle. However, only about half (52\%) of the respondents had a household vehicle available for use on the survey day instead of riding the Blue Line. On a per capita basis, $40 \%$ of the riders owned fewer than 0.5 vehicles.

### 2.12 SERVICE QUALITY

Survey respondents were asked to rate the Blue Line on a scale from " 1 " (poor) to " 5 " (excellent) by eleven measures of service quality. The rating " 3 " was labeled "average." Most respondents rated the service quality for most measures as " 3 " or " 4 ." The two service quality measures with the highest percentage of "excellent" (" 5 ") ratings were announcements (26\%) and fare collection (22\%), while the measure with the highest percentage of " 1 " and " 2 " ratings was station amenities (41\%).

Based on an averaging of all respondents’ ratings, the three measures rated most favorably were announcements, personal safety, and fare collection, and the three measures rated least favorably were station amenities, seating (on
trains), and parking.
Respondents were also asked to indicate which three of the eleven service quality measures were most important to them. The top three were reliability, frequency, and personal safety.

### 2.13 COMMENTS AND SUGGESTIONS

Approximately half of the returned survey forms had comments written on them (either in the form's Comments/Suggestions field or in the margins). These comments varied from vague positive and negative statements such as "Great job!" or "The T is run poorly" to specific suggestions such as "Increase Route 225 outbound service to Columbian Square 8:00 AM to noon and after 3:00 PM." Many riders used the Comments/Suggestions field to complain about a specific issue; others used the space to suggest ideas about how the MBTA could improve their transit experience. The most frequent comments were complaints about unreliable service, discourtesy of MBTA personnel, overcrowded vehicles during peak hours, uncleanliness, and jerky stops and starts. Other frequent comments included requests for:

- More service (peak hour, early morning, late night, and weekend)
- More bus shelters, benches, and other station amenities
- Better communication about delays
- Real-time information available online and at bus stops
- Better coordination of schedules between different modes

In general, the passengers who wrote comments felt that the service reliability and frequency should be improved; however, a significant number of them indicated that they were satisfied with the existing service.

## Trip Purpose, Reasons for Using the MBTA, and Alternative Means

The three types of data presented in this chapter, taken as a whole, could be said to "frame" the trips the riders made. These data help answer the questions: What kinds of trips were Blue Line riders making? Why did they choose to use rapid transit service? What were their alternatives?
The tables (at the end of the chapter) present these data by station. For each station, three tables presenting the three respective types of data are grouped on a single page. The data for each station are based on the survey responses from riders who started he rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 3.1 TRIP PURPOSE

### 3.1.1 Description of Table

The trip purposes table for each station shows the allocation of the trips among nine categories: home-based work, home-based school, home-based shopping, home-based social activity, home-based personal business, home-based workrelated, home-based other, work-based, and non-home/non-work-based. This allocation was done using information from survey questions 4 a and 9a: "Where were you before starting this entire one-way trip?" and "Where will/did this one-way trip end?" The actual origins and destinations (by municipality or neighborhood) of the trips by purpose are shown in Chapters 4 and 9 , respectively.

Trips with home at either end were classified as home-based. For example, trips either from home to work or from work to home were counted as homebased work trips, and there was no "work-based home" category. Work-based trips were those with work at one end and an activity other than home at the other end. Non-home/non-work-based trips did not have home or work at either end.

For each of the trip purposes, the table shows the number of riders and the percentage that these riders represent relative to the total number of riders entering the rapid transit system at the station who specified their activities at
both trip ends. It also gives the cumulative percentages that result as one adds each trip purpose category of riders to the ones preceding it in the table.

### 3.1.2 Overview of Results

At every station along the Blue Line, the most common trip purpose category was home-based work. At the downtown stations (Aquarium through Bowdoin), between $38 \%$ and $48 \%$ of all trips were home-based work. From Maverick through Wonderland, the percentages ranged between $66 \%$ and $87 \%$. Percentages of home-based trips tended to be higher at the non-downtown stations, because they serve predominantly residential areas, and because most work-to-home trips from downtown stations would take place later than the survey hours.

At most of the downtown stations, the second-most common trip type was work-based. This category included trips such as from an office to an off-site meeting, a restaurant, or a shop. Between $13 \%$ and $21 \%$ of all trips were workbased at downtown stations. At State Station, however, the second-most common trip purpose was home-based other (trips for which riders identified home as the purpose at one end of the trip and "other" at the other end).

At four of the non-downtown stations, work-based trips were the second-most common trip type: Wonderland (4\%), Beachmont (4\%), Airport (13\%), and Maverick (6\%). At the other four non-downtown stations, home-based personal business was the second-most common trip type: Revere Beach (9\%), Suffolk Downs (8\%), Orient Heights (5\%), and Wood Island (4\%—tied with homebased school).
Home-based shopping trips accounted for $3 \%$ or less of trips at all Blue Line stations with the exception of Bowdoin (7\%) and Government Center (10\%). Home-based school trips ranged between $0 \%$ and $5 \%$ at all stations, with the exception of Government Center (7\%). The response rate of people under 18 years old was very low (see Chapter 11), which partly explains the low reported number of school trips.

The trip purpose results may have been affected by the survey distribution strategy, which captured riders entering stations between the hours of 6:00 AM and 3:00 PM. The scope of the project did not allow for all-day distribution, although it was designed to provide $85 \%$ of weekday riders the opportunity to receive and complete surveys. In particular, trips in the evening to socialize and personal trips completed on the way home from work may have been underrepresented.

### 3.2 REASONS FOR USING THE MBTA

### 3.2.1 DESCRIPTION OF TABLE

The table for each station showing the reasons for using MBTA rapid transit service summarizes the results from question 22 on the survey. This question listed eight possible reasons riders might have for using rapid transit rather
than some other mode of transportation. These were "convenience," "speed/travel time," "avoid driving/traffic," "avoid parking at destination," "environmentally responsible," "less expensive than other choices," "can read/do work on the train," and "only transportation available." There was also a space for writing in other reasons.

The table presents both the number and percent of riders who selected each reason. Riders were allowed to check as many reasons as they felt were relevant. Therefore the values in the "Number of Riders" column have not been totaled in the table; the number at the bottom of that column is the number of riders who checked at least one reason. The values in the "Percent of Riders" column may add up to more than $100 \%$. The percentages were calculated by dividing the number of responses for each reason by the total number of people who checked at least one reason.

### 3.2.2 Overview of Results

At all of the stations except Wonderland, the most frequently selected reason for using rapid transit was "convenience." At Wonderland, "convenience" was third behind "avoid driving/traffic" and "avoid parking." Generally, the percentage of people choosing "convenience" was between $60 \%$ and $70 \%$, with State and Wonderland falling outside of this range at $47 \%$ and $54 \%$, respectively.

The second- and third-most frequently selected reasons reflected people's desire to "avoid parking at destination" or "avoid driving/traffic." These two choices were within $2 \%$ to $5 \%$ of each other at most stations, with the exception of Suffolk Downs ("avoid parking," $58 \%$; "avoid driving," $51 \%$ ) and Aquarium ("avoid parking," 49\%; "avoid driving," 68\%).

The fourth- and fifth-most frequently selected reasons at the non-downtown stations were "less expensive" followed by "environmentally responsible," with the exception of Airport Station, at which this order was reversed. At most non-downtown stations, the responses for these two reasons were within 10 percentage points of each other; at Revere Beach, Orient Heights, and Maverick they were within 3\% of each other.

At three of the four downtown stations (Bowdoin, Aquarium, and Government Center), the fourth- and fifth-most frequently selected reasons for using rapid transit were "speed" and "environmentally responsible." At State, "only transportation available" was second after convenience, with "environmentally responsible" placing eighth.

Some of the write-in, "other" answers indicated the desire not to own a car, which may reflect the cost of driving, the wish to avoid driving, or the desire to be environmentally responsible. Other write-in answers included responses such as "no parking at home" and indications that the rider enjoyed riding on trains or liked the exercise of walking to the station.

### 3.3 ALTERNATIVE MEANS OF TRANSPORTATION

### 3.3.1 Description of Tables

The two tables for each station on alternative means of transportation summarize the results of question 13b, which asked riders to indicate whether they used other means of making the same trip on days when they did not use the Blue Line, and, if so, what mode or modes of transportation they used. The first table shows the breakdown of passengers responding "yes" and "no" to use of alternative modes. The second table shows, for riders responding "yes," the number and percent checking off each listed mode. The modes listed were "drive alone," "non-MBTA bus," "carpool/vanpool," "bicycle," "other MBTA service," and "other" with a write-in option.

Riders were allowed to check more than one mode. Therefore the values in the "Number of Riders" column have not been totaled in the table; the number at the bottom of that column is the number of riders who checked at least one mode. The values in the "Percent of Riders" column may add up to more than $100 \%$. The percentages were calculated by dividing the number of responses for each mode by the total number of people who checked at least one alternative mode. Some riders indicated that they do use alternative modes of transportation but did not check any listed options (including "other").

### 3.3.2 OVERVIEW OF RESULTS

The most common alternative mode of transportation reported by riders who made the same trip using other means when not riding the Blue Line was "drive alone," which was the answer of between $37 \%$ and $47 \%$ of the respondents at the downtown stations and of between $49 \%$ and $83 \%$ at the nondowntown stations. "Other" was the second-most commonly selected mode at most stations but was selected as frequently as or more frequently than "drive alone" at Government Center and at State. The "other" responses that had write-in mode descriptions were most often "walk," "taxi," or "dropped off."

After "other," "carpool/vanpool" and "other MBTA service" were the nextmost frequently selected transportation alternatives. Riders at the nondowntown stations tended to choose "other MBTA service" more frequently than riders at the downtown stations, where "carpool/vanpool" and "other MBTA service" were selected with about equal frequency. One major exception was State, where no one checked "other MBTA service."

## Origin Locations and Activities

The data in this chapter show where Blue Line riders started their trips (by city, town, or neighborhood) and indicate what their activities were at each of those origin locations. This information is useful in defining the market area of each of the Blue Line stations and for understanding the types of trips made on the Blue Line. Additional information regarding the reasons for making trips is presented in Chapters 3 and 9.

A table presenting these data is provided for each station; the tables are at the end of the chapter. Each table shows both the origins and origin activities for the riders who entered the rapid transit system at the station in question. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 4.1 ORIGIN LOCATIONS

### 4.1.1 Description of the Origin Locations Section of the Table

In each station's table, the left side summarizes the results of survey question 4b, which asked where riders began the entire one-way trips they were making when surveyed. The data show origin location by city, town, or neighborhood. In the systemwide passenger survey of which this Blue Line survey is a part, the responses about origin locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips originating from outside of Massachusetts, the city and the state are given.
Origins reported by less than $0.5 \%$ of riders at a station were aggregated and placed in the "other" category; therefore, not all cities, towns, and neighborhoods from which Blue Line trips originated are represented individually in the table. Some survey responses did not contain enough information to determine an origin city, town, or neighborhood; these responses were aggregated into the "unspecified" category. The origin locations are listed in descending order, based on the number of riders.
It is important to note that the tables for Government Center and State Stations
only include riders who entered the rapid transit system there and boarded the Blue Line. Appendix B contains data on all riders who entered these stations (including those who boarded the Green or Orange Line).

### 4.1.2 OVERVIEW of Results

The size of the market for each station depends on a number of factors that influence a rider's choice to use that station instead of another transportation mode. These include, in addition to the station's proximity to the rider's origin, its proximity to other transit services, the relative ease of access, and the amount of parking available. In general, the outer stations drew riders from a much larger area than the inner stations. For example, if origins that were reported by less than $0.5 \%$ of the riders are included, the number of origin locations for people boarding at Wonderland was 25, at Beachmont 14, and at Maverick 12, but at Bowdoin only 4-all 4 of those origins being close-by Boston neighborhoods.

### 4.2 ORIGIN ACTIVITIES

### 4.2.1 Description OF the Origin Activities Section of the Table

In each station's table, the right side of the table summarizes the results of survey question 4a, "Where were you before starting this entire one-way trip?" The survey form provided eight check-off choices: "at work," "at school," "at home," "at a store," "at a doctor or other personal business," "at a work-related errand or meeting," "at a restaurant, or social or recreational activity," and "other" (with a space for write-ins). For each origin location, the table shows the percentages of riders who reported starting from each of these eight "activities." The absolute number of riders starting from each activity can be determined by multiplying these percentages by the origin location totals on the left side of the table.

For each entry station, the number of survey responses from which the results in the table were expanded was greater for locations in the upper rows and smaller for those in the lower rows. Consequently, the higher the row, the more reliable the distribution of activities given for that origin location. For similar reasons, if one combines the data from groups of stations in the same general area, the resulting distribution of activities by origin location is more reliable than the results for individual stations.

### 4.2.2 OVERVIEW OF RESULTS

For the most part, the origin "activity" of people boarding at the nondowntown stations, Wonderland through Maverick, was home: looking at the riders from the top 10 origin locations for these stations, home was the origin activity for $87 \%$. This is partly a reflection of the hours when the survey was handed out (6:00 AM to 3:00 PM). Had the survey been handed out later, more people would likely have been starting from an "activity" other than home. The predominance of the home origin activity also reflects the residential nature of
most of the neighborhoods that the Blue Line serves. The Blue Line is the primary transit connector between the inner North Shore and downtown Boston. The main function of this line is to carry people between their homes and their places of work in Boston (see Chapters 3 and 9).

An exception to these findings regarding riders boarding at the non-downtown stations is Airport Station. There, home was not the origin activity of any of the riders starting from the airport itself. Of these riders, $60 \%$ were coming from work or work-related activities. (For the purposes of the survey, arriving airline passengers were considered to have started their trips at the airport. They contributed to the large percentage of "other" origin activity.) Aside from these riders, however, the findings for Airport Station were consistent with those for the other non-downtown stations: of the riders with origin locations other than the airport, $94 \%$ indicated that their origin activity was home.
At the downtown stations, Bowdoin, Government Center, State, and Aquarium, the origin activity of the majority of entering riders was work, a work-related activity, shopping, or personal business. Of the riders from the top 10 origin locations for these stations, only $20 \%$ indicated that their origin activity was home. Of those coming from the Financial/Retail District, the second-largest source of riders at these stations, none reported an origin activity of home during the survey hours. "Other" was a much more common origin activity at the downtown stations (8\%) than at the non-downtown stations ( $2 \%$, excluding Logan Airport origins).

The data presented in this chapter describe aspects of riders' travel between the origins of their entire trips and the Blue Line stations where they began their rapid transit trips. These data consist of two types. One is the modes of transportation used by riders to access the Blue Line; for riders who used more than one mode previous to the Blue Line, this "access mode" is the one used immediately before accessing the Blue Line station. The other type of data in this chapter pertains only to the riders whose access trips were made via private transportation modes; it is the trip times for riders’ entire access trips from their trip origins to the Blue Line station.

For trips to the Blue Line in which the access mode was a public transportation mode, additional details are given about the service used: for bus trips, the specific routes; for commuter rail trips, the initial boarding stations; and for boat trips, the initial boarding docks. The access trips via public transportation do not include rapid transit trips, as the entire surveyed trips made by riders who transferred to the Blue Line from the Red, Orange, or Green Line are reported on in the survey reports for those rapid transit lines, rather than in this Blue Line volume.

The tables (at the end of the chapter) present all of these data by station. For each station, the table on access mode and the one on access trip time appear together on one page, and the four tables specifying bus routes and initial stations or docks are on the following page. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 5.1 ACCESS MODE

### 5.1.1 Description of Table

The access mode table for each station shows the distribution of trips among 12 transportation modes that riders used immediately before accessing that station. Seven of the modes are private: walk, drive, drop-off, taxi, shuttle/van, bicycle, and "other." Five are public: MBTA bus, other bus, commuter rail, boat, and
"other." The private and public access modes are grouped separately in the table. As explained above, further details on the access trips made by public transportation are given in four subsequent tables.

Two columns present, respectively, the number and the percent of riders who reported using each mode to access the station for which the table was generated. Each column includes subtotals for the private and public modes. The number of expanded survey responses that provided no answer about the access mode appears in the table, but those responses are excluded from the percentage calculations.

### 5.1.2 Overview of Results

Walking was the most frequently reported access mode to every Blue Line station except Wonderland. The downtown stations had the highest walk-in rates, ranging from $73 \%$ at State to $100 \%$ at Government Center. None of these four stations had any reported driving access trips.
Wonderland had the highest drive-in access rate on the line, at $64 \%$, and another $8 \%$ were dropped off there. As the outer terminal of the line, Wonderland is the nearest station to origins north of Revere.

Orient Heights had the highest drop-off rate on the line (14\%). The majority of those trips originated in Winthrop. Most points in that town are beyond convenient walking distance from the Blue Line, but the only road between Winthrop and Boston goes directly past Orient Heights Station.

Orient Heights also had the highest bus access rate on the line (34\%), with all of these trips originating in Winthrop. Other Blue Line stations with bus access rates of $15 \%$ or more were Wonderland (16\%), Airport (18\%), Maverick (23\%), and State (21\%). There are no direct commuter rail connections to the Blue Line; however, $3 \%$ of the riders boarding at the four downtown stations had walked from North Station or South Station (or used some unspecified intermediate mode) after arriving by commuter rail.

### 5.2 TRIP TIME FOR ACCESS VIA PRIVATE TRANSPORTATION

### 5.2.1 Description of Table

For each station, this table summarizes the reported access times, from trip origin to Blue Line station, for riders who made their access trips entirely by private transportation. Trips in which private transportation was used to access an intermediate, public mode that was then used to reach the Blue Line are not included. The access times are summarized by seven ranges starting with 0 to 5 minutes and continuing at varying intervals up to an open-ended range of anything over 45 minutes.
The table shows the number of riders with reported times in each range for the walk, drive/park, and drop-off access modes individually and for all other private access modes combined. Within each of these four groups, it also shows the percent of access trips in each time range and the average access
time for the mode.

### 5.2.2 OVERVIEW OF RESULTS

Access times are related to the size of the market area of each station. For downtown stations the market areas served by private transportation access are relatively small because the stations are close to each other and because there is little or no parking near them.

Much of the Blue Line ridership at Government Center and State consists of transfers from the other rapid transit lines that serve these two stations, but for each of these stations, the access time table includes only riders who started their rapid transit trips at that station. Transfers from other types of public transportation are discussed in section 5.3.2

Among riders reporting drive/park access to any Blue Line station, the access time range with the largest number of reported trips was 16 to 20 minutes, and the average reported time was 18 minutes. Percentages of drive/park trips with access times in the ranges above 20 minutes were highest at Wonderland, Suffolk Downs, and Airport, at 38\%, 39\%, and 55\% respectively. (Driving times do not translate directly to distance, as average speeds on access routes vary.)
Walking access times to all Blue Line stations combined averaged 8 minutes. Only $3 \%$ exceeded 20 minutes, or about one mile for an average person.

### 5.3 TRANSFERS TO THE BLUE LINE FROM COMMUTER RAIL, BUS, OR BOAT

### 5.3.1 Description of Tables

For each station, four tables provide further details on the public-access-mode trips shown in the access mode table. For riders transferring to the Blue Line from commuter rail, one table gives the commuter rail stations at which riders boarded (the commuter rail line that was boarded at each station listed is not, however, specified). Likewise, for transfers from a commuter boat line, a table gives the boat dock at which riders boarded. Two other tables indicate specific bus routes for riders who transferred from an MBTA or non-MBTA bus to the Blue Line. Non-MBTA routes are identified as shown below:

TABLE 5-1
Designations Used for Private and Other Non-MBTA Bus Services

| Designation | Definition |
| :--- | :--- |
| BEX | Boston Express Bus |
| MPA | Massport shuttle at Logan Airport |
| PB | Plymouth \& Brockton Street Railway Co. |

The bus routes listed in the transfer tables are those reported in response to
question 5a as the first bus used, if applicable, in the access trip to the Blue Line. In cases involving multiple transfers, the intermediate link is not specified. For example, the Maverick Station table shows 23 transfers from Route 111, which does not go to that station. It may be presumed that those riders transferred from Route 111 to Route 114,116 , or 117 , but they would not be included in the transfer totals from those routes. Few riders make such double transfers.

For stations where there were too many bus routes or too many commuter rail stations to list all individually on one page, the table combines those beyond a set number of rows as "other routes" or "other stations." Because the bus routes and commuter rail stations are listed in descending order by number of riders, it is the less used ones that are combined.

Differences in the totals of the values shown in the transfer tables and those in the access mode tables are a result of rounding weighted records at different levels of aggregation.

### 5.3.2 OVERVIEW OF RESULTS

The volume and percent of total access trips accounted for by transfers at any station depend on the number of connecting routes, the ridership on those routes, and the directness of the transfers. Of the Blue Line stations, Maverick, served directly by 5 MBTA bus routes, had the largest absolute number of bus transfers $(1,270)$. Orient Heights, with 2 direct bus connections, was second (910), and Wonderland, with 14 direct bus connections, was third (702). Although Wonderland is served by many more routes than Maverick or Orient Heights, overall ridership is lower on the routes serving Wonderland than on the routes that serve the other two stations. In addition, the two routes that serve both Maverick and Wonderland (Routes 116 and 117) have higher ridership at Maverick than at Wonderland.

Although the Blue Line has no direct commuter rail connections, a small number of Blue Line riders reported beginning their transit trips at commuter rail stations and transferring to the Blue Line by either walking from North Station or South Station, or using unspecified intermediate modes. The data show these types of transfer from only three commuter rail lines; the riders transferred to three Blue Line stations: 39 riders who boarded at Ballardvale Station (on the Haverhill Line) and 19 who boarded at Bellevue Station (on the Needham Line) transferred to the Blue Line at Aquarium; 39 riders who boarded at Framingham Station (on the Framingham/Worcester Line) transferred to the Blue Line at State; and 6 riders who boarded at South Acton Station (on the Framingham/Worcester Line) transferred to the Blue Line at Bowdoin. These numbers are expanded from only five survey responses. A larger sample would likely have shown additional transfers.

The Blue Line's Aquarium Station is at Long Wharf, where boats from Hull, Quincy, and Charlestown dock. It is also within walking distance of the Rowes Wharf terminal of the Hingham boat route. The surveys showed some transfers
to the Blue Line from each of the Long Wharf boat lines, but none from the Hingham line. These results are reasonably consistent with those of the boat surveys.

## Exits from the Rapid Transit System

The tables in this chapter show, for the riders who entered the rapid transit system at each Blue Line station, the number who exited the system at each of the other rapid transit stations (in the case of the riders who exited on the surface Green Line, the exit locations are given in terms of segments of the line, rather than individual stops). Also, for each potential exit station at which the riders had the option of transferring to another rapid transit line, the tables show how many of them transferred there (as well as how many exited the system there).

The tables (at the end of the chapter) present these data by entry station. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 6.1 DESCRIPTION OF TABLES

For each station, the data are reported in six tables divided between two pages. The four tables on the first page show exits and transfers at stations on the Red, Orange, and Blue heavy rail lines and the Mattapan High-Speed Line (light rail). These tables also show, for each line, exits by riders whose responses did not allow the specific exit station to be determined.

The first table on the second page shows exit and transfer data for stations on the Green Line Central Subway ${ }^{1}$ and for segments of the surface Green Line’s B, C, D, and E Branches. Exits are also shown for riders whose responses were not specific enough for determining where on the Central Subway or on a surface branch the exit took place. The second table on the second page shows summary data for each of the rapid transit lines.

With the exception of the summary table, each of the tables comprises four columns. The first column shows the names of the stations or segments on the line covered by the table. Stations serving more than one rapid transit line

[^5]appear in the tables for each of those lines, with an identifying suffix. For example, State Station appears in the Blue Line table as "State-B" and in the Orange Line table as "State-O." Blue Line passengers would exit or transfer only at State-B.

The second column, labeled "Exits," shows, for the entry station, the number of riders who finally left the rapid transit system at the station shown in the first column. The third column, labeled "Percent of Riders," shows the value in the "Exits" column as a percent of the total exits shown in all five tables combined. That overall total is found at the bottom of the sixth table.

The fourth column, labeled "Transfers," shows the number of riders from the entry station who alighted at the station shown in the first column in order to transfer to another rapid transit line (either heavy or light rail). For example, in the Blue Line exit table, passengers transferring from the Blue Line to the Orange Line at State Station are shown in the "Transfers" column of the "State-B" row. (They are not included in the State-B "Exits" total or percent.) These riders' next decisions-either to exit the rapid transit system from an Orange Line station or to transfer again-are accounted for in the accompanying Orange Line exit table. That is, except for slight differences in rounding, the number of riders transferring from the Blue Line to the Orange Line will equal the combined total of riders either exiting or transferring again at Orange Line stations. (For example, from Maverick Station, 715 riders transferred at State-B to the Orange Line. The total Orange Line exits [593] plus the total Orange Line transfers [122] equals 715.)
The Blue Line does not connect directly with the Red Line, so passengers transferring between those lines use either the Orange Line from State to Downtown Crossing or the Green Line from Government Center to Park Street as an intermediate link. Those who transfer from the Blue Line to the Red Line via the Orange Line, for example, are counted both in the "Transfers" total for State-B in the Blue Line table and in the "Transfers" total for Downtown Crossing-O in the Orange Line table.

Passengers going to points on the Mattapan High-Speed Line from any other rapid transit line must transfer to the High-Speed Line from the Red Line at Ashmont Station. For a given Blue Line entry station, in the Red Line exit table, the "Transfer" total for Ashmont-R will be equal to the total number of riders shown in the High-Speed Line exit table to have exited at all stations combined on that line (Beachmont, Maverick, and Bowdoin are the only stations with entering riders who exited on that line). The riders making these Mattapan exits constitute a portion of the double transfers from the Blue Line to the Red Line via either the Orange Line or the Green Line.

It should be noted again that the data in these tables are only for riders entering the rapid transit system between 6:00 AM and 3:00 PM. Therefore, these results are dominated by passengers making their first trips of the day. After 3:00 PM (a period which, again, is not reflected in the survey results), the return segments of round-trips would be dominant. That is, riders entering the
rapid transit system at a given station after 3:00 would be predominantly the same riders who had exited there that morning, and on their PM trips they would exit the rapid transit system at mostly the same stations where they had entered the system that morning. Therefore, the "Entries to the Rapid Transit System" tables in Chapter 7 (which reflect trips made before 3:00) should approximate what the present chapter's "Exits from the Rapid Transit System" tables would have looked like if the survey had been conducted from 3:00 PM until the end of service.

### 6.2 OVERVIEW OF RESULTS

Because of the large number of rapid transit stations in the system, the exit stations of the Blue Line riders are discussed here mostly in terms of line or station group rather than individual station.

The number of Blue Line riders who not only entered but also exited the rapid transit system at a Blue Line station was larger than the number who transferred to one or more other rapid transit lines. That parallels what happened on each of the other rapid transit lines as well. However, on the Blue Line, "single-line" riders made up a smaller percentage (63\%) of all riders than on the Red Line (80\%), Orange Line (84\%), or Green Line (83\%). This reflected the smaller number of locations served directly by the Blue Line.

After the Blue Line itself, the Green Line accounted for the largest share of exits from rapid transit for trips that started on the Blue Line, at 19\%. Stations on the Central Subway accounted for two out of three of these (13\%), with the rest divided among surface Green Line segments. The Orange Line, at $9 \%$, was slightly higher than the Red Line, at $8 \%$, in share of exits of Blue Line trips.

The non-downtown Blue Line stations accounted for 85\% of the Blue Line riders’ entries during the survey span. Among the passengers entering at these stations, $60 \%$ exited at Blue Line stations, with the four downtown stations alone accounting for $55 \%$. State Station had the largest individual share, at $23 \%$, followed by Aquarium, at $13 \%$. Among the stations on other lines at which Blue Line riders from non-downtown stations exited, the largest individual shares were about 3\% each to Boylston and Arlington on the Green Line's Central Subway and about 3\% to Harvard on the Red Line.
The four downtown Blue Line stations are all within 0.6 miles of each other. Consequently, there are limited reasons for passengers to enter the Blue Line at one of these four stations in order to travel to one of the others, either to exit or to transfer (two of these four stations are transfer points to other rapid transit lines). Of the passengers entering the Blue Line at a downtown station, $81 \%$ finally exited at another Blue Line station, including 73\% at a non-downtown Blue Line station.

* The role of transfers in these exit data tables is explained in section 6.1.

The tables in this chapter show, for the riders who exited the rapid transit system at each Blue Line station, where, earlier in their surveyed trips, those riders had originally entered the system. The potential entry locations consist of all of the other rapid transit stations on all of the lines, including the Blue Line; the exception to this is that, in the case of the riders who entered on the surface Green Line, the entry locations are given in terms of segments of the line, rather than individual stops. The tables give the number of riders who entered at each location.

The tables also show, for the same riders, where they had made any transfers from one rapid transit line to another during their trips. For each station where such transfers are possible, the tables give the number of transfers made.

The tables (at the end of the chapter) present these entry and transfer data by exit station. The data for each station are based on the survey responses from riders who ended the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 7.1 DESCRIPTION OF TABLES

For each exit station on the Blue Line, the data are reported in six tables divided between two pages. The four tables on the first page show entries and transfers at stations on the Red, Orange, and Blue heavy rail lines and the Mattapan High-Speed Line (light rail). These tables also show, for each line, entries by riders whose responses did not allow the specific entry station to be determined.

The first table on the second page shows entry and transfer data at stations on the Green Line Central Subway ${ }^{1}$ and on segments of the surface Green Line's B, C, D, and E Branches. Entries are also shown for riders whose responses were not specific enough for determining where on the Central Subway or on a surface branch the entry took place. The second table on the second page

[^6]shows summary data for entries on each of the rapid transit lines.
With the exception of the summary table, each of the tables comprises four columns. The first column shows the names of the stations or segments on the line covered by the table. Stations serving more than one rapid transit line appear in the tables for each of those lines, with an identifying suffix. For example, State Station appears in the Blue Line table as "State-B" and in the Orange Line table as "State-O." Blue Line passengers would enter or transfer only at State-B.

The second column, labeled "Entries," shows, for the exit station, the number of riders who first entered the rapid transit system at the station shown in the first column. The third column, labeled "Percent of Riders," shows the value in the "Entries" column as a percent of the total entries shown in all five tables combined. That overall total is found at the bottom of the sixth table.

The fourth column, labeled "Transfers," shows the number of riders at the Blue Line exit station who in the course of their trip made a transfer at the station shown in the first column. At some of these transfer stations, the transfers were directly to the Blue Line; at others, the transfers were to an intermediate rapid transit line from which the riders transferred to the Blue Line. An example of the former case is that, in the Blue Line entry table, passengers transferring from the Orange Line to the Blue Line at State Station are shown in the "Transfers" column of the "State-B" row. They are not included in the State-B "Entries" total or percent. These riders’ previous actions-either to enter the rapid transit system at an Orange Line station or to transfer to the Orange Line from another line-are accounted for in the accompanying Orange Line entry table. That is, except for slight differences in rounding, the number of riders transferring to the Blue Line from the Orange Line will equal the combined total of riders either entering at or transferring to Orange Line stations. (For example, in the tables about riders who exited at Airport Station, 410 riders transferred from the Orange Line to the Blue Line at State-B. The total Orange Line entries [370] plus the total transfers to the Orange Line [40] equals 410.)

The Blue Line does not connect directly with the Red Line, so passengers transferring from Red to Blue use either the Orange Line from Downtown Crossing to State or the Green Line from Park Street to Government Center as an intermediate link. In the example above for Airport Station, the 40 transfers to the Orange Line at Downtown Crossing came from the Red Line, and are part of the total 101 riders shown entering at Red Line Stations. The Green Line table shows 60 transfers to the Green Line at Park Street. Except for differences in rounding, these include the rest of the 101 Red Line riders going to Airport Station.

Passengers coming from points on the Mattapan High-Speed Line destined for any other rapid transit line must transfer from the High-Speed Line to the Red Line at Ashmont Station. For a given Blue Line exit station, in the Red Line entry table, the "Transfer" total for Ashmont-R will be equal to the total number of riders shown in the High-Speed Line entry table to have entered at
all stations combined on that line (In the survey, Bowdoin was the only Blue Line station with exiting riders who were reported as entering on the on the High-Speed Line). The riders entering along the High-Speed Line constitute a portion of the double transfers from the Red Line to the Blue Line via either the Orange Line or the Green Line.

It should be noted again that the data in these tables are only for riders entering the rapid transit system between 6:00 AM and 3:00 PM. Therefore, these results are dominated by passengers making their first trips of the day. After 3:00 PM (a period which, again, is not reflected in the survey results), the return segments of round-trips would be dominant. That is, riders entering the rapid transit system at a given station after 3:00 would be predominantly the same riders who had exited there earlier that day, and on their trips after 3:00 they would exit the rapid transit system at mostly the same stations where they had entered the system earlier that day. Therefore, the present chapter's "Entries to the Rapid Transit System" tables (which reflect trips made before 3:00) should approximate what the "Exits from the Rapid Transit System" tables in Chapter 6 would have looked like if the survey had been conducted from 3:00 PM until the end of service.

### 7.2 OVERVIEW OF RESULTS

Because of the large number of rapid transit stations in the system, the entry station results are discussed here mostly by line or by station group rather than by individual station. The majority of riders exiting at Blue Line stations also entered the system at Blue Line stations. At $80 \%$, the percentage of exiting Blue Line riders who used only that line was slightly greater than the $78 \%$ of exiting Red Line riders who were Red Line-only riders and somewhat greater than the $74 \%$ of Green Line exits originating on the Green Line, but lower than the $87 \%$ of Orange Line exits starting on the Orange Line.

At downtown Blue Line stations, where 67\% of the Blue Line station exits occurred during the survey span, $90 \%$ of those riders had also entered at Blue Line stations, $88 \%$ of them at non-downtown Blue stations, with Wonderland (22\%) and Maverick (21\%) having the largest individual shares. Blue Lineonly trips accounted for $59 \%$ of the exits at the non-downtown stations. These riders included $41 \%$ who entered at the downtown Blue Line stations.

After the Blue Line itself, the Green Line accounted for the largest share of entries of trips that ended on the Blue Line, at $8 \%$. Stations on the Central Subway accounted for just under half of these, with the rest divided among surface Green Line segments. The Orange Line, at 7\%, was ahead of the Red Line, at $5 \%$, in share of entries of Blue Line exit trips. Among individual nonBlue Line stations whose entry trips exited anywhere on the Blue Line, the stations with the largest shares were Lechmere and Copley on the Green Line Central Subway, with about 1\% each.

## Egress from the Rapid Transit System

The data presented in this chapter describe aspects of riders' travel between the Blue Line stations where they ended their rapid transit trips and the destinations of their entire trips. These data consist of two types. One is the modes of transportation used by riders when leaving the Blue Line; for riders who used more than one mode following their Blue Line trips, this "egress mode" is the one used immediately after leaving the Blue Line station. The other type of data in this chapter pertains only to the riders whose egress trips were made via private transportation modes; it is the trip times for riders' entire egress trips from the Blue Line station to their trip destinations.

For trips from the Blue Line in which the egress mode was a public transportation mode (a.k.a. transfers), additional details are given about the service used: for bus trips, the specific routes; for commuter rail trips, the final exiting stations; and for boat trips, the final exiting docks. The egress trips via public transportation do not include rapid transit trips, as the entire surveyed trips made by riders who transferred from the Blue Line to the Red, Orange, or Green Line are reported on in the survey reports for those rapid transit lines, rather than in this Blue Line volume.

The tables (at the end of the chapter) present all of these data by station. For each station, the table on egress mode and the one on egress trip time appear together on one page, and the four tables specifying bus routes and final stations or docks are on the following page. The data for each station are based on the survey responses from riders who completed the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 8.1 EGRESS MODE

### 8.1.1 Description of Table

The egress mode table for each station shows the distribution of trips among 12 transportation modes that riders used immediately after departing that station. Seven of the modes are private: walk, drive/park, pick-up, taxi, shuttle/van, bicycle, and "other." Five are public: MBTA bus, other bus, commuter rail,
boat, and "other." The private and public egress modes are grouped separately in the table. As explained above, further details on the egress trips made by public transportation are given in four subsequent tables.

Two columns present, respectively, the number and the percent of riders who reported using each mode to depart the station for which the table was generated. Each column includes subtotals for the private and public modes. The number of expanded survey responses that provided no answer about the egress mode appears in the table, but those responses are excluded from the percentage calculations.

### 8.1.2 Overview of Results

Walking was the most frequently reported egress mode from every Blue Line station except Wonderland and Airport. The downtown stations had the highest walk-away rates, ranging from $93 \%$ at State to $97 \%$ at Government Center and Bowdoin. At the non-downtown stations, walking egress rates ranged from $22 \%$ at Wonderland to $72 \%$ at Wood Island.

Driving was the most frequently reported egress mode from Wonderland Station, at $56 \%$. Another $5 \%$ of the riders were met and driven from there. As the outer terminal of the line, Wonderland is the nearest station to destinations north of Revere. At Revere Beach, Beachmont, Suffolk Downs, and Wood Island, drive/park was the second-most-common egress mode, at 18\% to $28 \%$, but accounted for under 5\% at all other Blue Line stations except Orient Heights (13\%).

At Airport Station, non-MBTA bus (Massport shuttles) was by far the most common egress mode, at 62\%; however, transfers to non-MBTA buses at other stations were insignificant. MBTA bus was the second-most-common egress mode at Orient Heights (40\%) and Wonderland (17\%) but had shares of no more than $8 \%$ at any other Blue Line station.

### 8.2 TRIP TIME FOR EGRESS VIA PRIVATE TRANSPORTATION

### 8.2.1 DESCRIPTION OF TABLE

For each station, this table summarizes the reported egress times, from Blue Line station to trip destination, for riders who made their egress trips entirely by private transportation. Trips in which riders transferred from the Blue Line to an intermediate, public mode and then used private transportation as their final egress mode are not included. The egress times are summarized by seven ranges starting with 0 to 5 minutes and continuing at varying intervals up to an open-ended range of anything over 45 minutes.

The table shows the number of riders with reported times in each range for the walk, drive/park, and pick-up egress modes individually and for all other private egress modes combined. Within each of these four groups, it also shows the percent of egress trips in each time range and the average egress time for the mode.

### 8.2.2 Overview of Results

Egress times are closely related to the size of the market area of each station. For downtown stations, the market areas served by private transportation egress are relatively small, because the stations are close to each other and because there is little or no parking near them.

The majority of Blue Line riders alighting at Government Center or State transfer to connecting rapid transit lines there, but the egress summary tables for these stations only include riders completing their rapid transit trips there.
Walking egress times from all Blue Line stations combined averaged 7 minutes. Fewer than $1 \%$ of these trips exceeded 20 minutes, or about 1 mile for an average person. The overall average was heavily influenced by the results from the downtown stations, where the average at each station was 6 to 7 minutes. Among the non-downtown stations, Suffolk Downs had the shortest average walk-out time ( 5 minutes) and Revere Beach had the longest (14 minutes).

Among the stations where more than $10 \%$ of the egress trips were made by drive/park: Wonderland had the longest average drive time, at 24 minutes; average drive times ranged from 16 to 20 minutes at Beachmont, Suffolk Downs, and Wood Island but were only 10 minutes at both Orient Heights and Revere Beach.

### 8.3 TRANSFERS FROM THE BLUE LINE TO COMMUTER RAIL, BUS, OR BOAT

### 8.3.1 DESCRIPTION OF TABLES

For each station, four tables provide further details on the egress trips shown in the egress mode table that were made by a public transportation mode. For riders transferring from the Blue Line to commuter rail, one table gives the commuter rail stations at which riders alighted (however, for each station, the commuter rail line from which riders alighted is not specified). Likewise, for transfers to a commuter boat line, a table gives the boat dock at which riders alighted. Two other tables indicate specific bus routes for riders who transferred from the Blue Line to, respectively, an MBTA or non-MBTA bus. The only non-MBTA route reported by Blue Line riders was the Massport shuttle at Logan Airport, identified as MPA in the Transfers from Rapid Transit System tables.

The bus routes listed in the transfer tables are those reported in response to question 8 b as the last bus used, if applicable, in the egress trip from the Blue Line. In cases involving multiple transfers, the intermediate link is not specified.

Differences in the totals of the values shown in the transfer tables and of those shown in the egress mode tables are a result of rounding weighted records at different levels of aggregation.

### 8.3.2 OVERVIEW OF Results

At most Blue Line stations, transfers to buses accounted for only small shares of reported egress trips during the survey hours. There were no transfers from the Blue Line to commuter rail, and transfers to boat occurred only at Aquarium. At Airport Station, where the bus egress share was highest, all of the transfers were to free shuttles run by Massport between the station and terminals, offices, and other trip attractions at Logan Airport. State Station had the largest number of different MBTA bus routes reported for egress (seven), followed by Wonderland (five), Maverick (four), and Orient Heights (three).

This chapter's tables begin on the following page.

## Destination Locations and Activities

The data in this chapter show where Blue Line riders ended their trips (by city, town, or neighborhood) and indicate what their activities were at each of those destination locations. This information is useful in defining the market area of each of the Blue Line stations and for understanding the types of trips made on the Blue Line. Additional information regarding the reasons for making trips is presented in Chapters 3 and 4.

A table presenting these data is provided for each station; the tables are at the end of the chapter. Each table shows both the destinations and destination activities for the riders who exited the rapid transit system at the station in question. The data include not only the riders who left the entire transit system when they left the rapid transit portion of that system at these stations, but also riders who continued through transfers to bus, commuter rail, or boat. (Details on the means of transportation between rapid transit stations and destinations are provided in Chapter 8.)
Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 9.1 DESTINATION LOCATIONS

### 9.1.1 Description of the Destination Locations Section of the TABLE

In each station's table, the left side summarizes the results of survey question $9 b$, which asked where riders ended the entire one-way trips they were making when surveyed. The data show destination location by city, town, or neighborhood. In the systemwide passenger survey of which this Blue Line survey is a part, the responses about destination locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips ending outside of Massachusetts, the city and the state are given.

Destinations reported by less than $0.5 \%$ of riders at a station were aggregated and placed in the "other" category; therefore, not all cities, towns, and neighborhoods in which Blue Line trips ended are represented individually in the table. Some survey responses did not contain enough information to determine a destination city, town, or neighborhood; these responses were aggregated into the "unspecified" category. The destination locations are listed in descending order, based on the number of riders.

It is important to note that the tables for Government Center and State Stations only include riders who exited the rapid transit system there after alighting from the Blue Line. Appendix B contains data on all riders who exited the system at these stations (including those who had alighted from the Green or Orange Line).

### 9.1.2 Overview of Results

During the survey hours, $67 \%$ of the riders exiting the rapid transit system at a Blue Line station did so at one of the four downtown stations. Consistent with that, nearly half of the destinations for the Blue Line overall were in just two Boston neighborhoods that are served directly by those stations:
Financial/Retail (25\%) and Government Center (23\%). At Government Center Station alone, $80 \%$ of the exits were destined for the Government Center neighborhood, and at State 82\% were going either to Financial/Retail (63\%) or Government Center (19\%).
The third-largest share of overall Blue Line exit trips (12\%) was destined for East Boston. More than half of these exited at Maverick Station, where 92\% of all exit trips ended in East Boston. That neighborhood was also the largest single destination of passengers exiting at three of the other four stations in East Boston: Wood Island, Orient Heights, and Suffolk Downs. At Airport Station $86 \%$ of the exiting riders were going to Logan Airport, and the rest to other East Boston locations.

At each of the three stations in Revere, that city accounted for the single largest share of exit destinations, but that share was much higher at Revere Beach (91\%) and Beachmont (85\%) than at Wonderland (38\%). As the outer terminal of the Blue Line, with large parking capacity and many bus connections, Wonderland is much more of a regional facility than the other stations on the line. Lynn, the next city north of Revere, accounted for $22 \%$ of the Wonderland exit destinations. The rest were mostly scattered among nine North Shore communities, with individual shares ranging from $1 \%$ to $8 \%$.

### 9.2 DESTINATION ACTIVITIES

### 9.2.1 Description of the Destination Activities Section of the TABLE

In each station's table, the right side of the table summarizes the results of survey question 9a, "Where will/did this one-way trip end?" The survey form
provided eight check-off choices: "at work," "at school," "at home," "at a store," "at a doctor or other personal business," "at a work-related errand or meeting," "at a restaurant, or social or recreational activity," and "other" (with a space for write-ins). For each destination location (city, town, or neighborhood), the table shows the percentages of riders who reported ending at each of these eight "activities." The absolute number of riders ending at each activity can be determined by multiplying these percentages by the destination location totals on the left side of the table.

For each exit station, the number of survey responses from which the results in the table were expanded was greater for locations in the upper rows and smaller for those in the lower rows. Consequently, the higher the row, the more reliable the distribution of activities given for that destination location. For similar reasons, if one combines the data from groups of stations in the same general area, the resulting distribution of activities by destination location is more reliable than the results for individual stations.

### 9.2.2 OVERVIEW of Results

Overall, for the riders who exited the rapid transit system at a Blue Line station, the most common destination "activity" was work (65\%), followed by home (16\%). Shares for other individual "activities" ranged from 1\% to 5\%. At the four downtown stations combined, $82 \%$ of the exit destinations were work and only $1 \%$ home. This is partly a reflection of the hours when the survey was handed out (6:00 AM to 3:00 PM). Had the survey been handed out later, more people would likely have been heading to an "activity" other than work.

At the eight non-downtown stations combined, $45 \%$ of the destinations were home and $31 \%$ were work. This reflects the residential nature of the nondowntown neighborhoods that the Blue Line serves. The percentages of home destinations were highest at Wonderland (71\%) and Orient Heights (68\%).
At Airport Station, $53 \%$ of the exiting riders who were destined for Logan Airport were going to work and 31\% were going to "other" destination activities. (For the purposes of the survey, departing airline passengers were considered to have ended their trips at the airport. They contributed to the large percentage of "other" destination activity.)

## Origin-Destination

 Cross-tabulationThe data in Chapter 4 of this report show, for riders who began their rapid transit trips at Blue Line stations, the origin locations of their entire trips by city, town, or neighborhood. The data in Chapter 9 show the final destination locations, by city, town, or neighborhood, of riders who completed the rapid transit segments of their trips at Blue Line stations. The two corresponding chapters in the Red, Orange, and Green Line volumes of this set of survey reports show similar information for the passengers who either entered or exited the rapid transit system at stations on those lines.
In this chapter, the type of table presented provides, for the passengers who entered the rapid transit system at each Blue Line station, a cross-tabulation between the origins of the passengers' entire trips and the final destinations of these trips, regardless of the line or station where they exited the system. The corresponding chapter in the Red, Orange, and Green Line volumes presents the same type of cross-tabulation. A table is presented for each Blue Line entry station at the end of the chapter. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 10.1 DESCRIPTION OF TABLE

The origin-destination cross-tabulation table for each entry station is based on the responses to survey questions 4 b and 9 b , which asked riders to state the location of the starting and ending points of the trips they were making when they received the survey forms. Respondents were asked to provide the following information about these locations: address, or nearest intersection or landmark; city, town, or neighborhood; state; and zip code. However, many of the responses were less detailed than this. In such cases, missing details were inferred to the extent possible from other information provided, such as the transit boarding and alighting points, the modes of access and egress, and the access and egress times.

In the systemwide passenger survey of which this Blue Line survey is a part, the responses about origin and destination locations were aggregated by city or town, except in four municipalities: in Boston they were broken into 26 neighborhoods, in Cambridge into six, in Somerville into four, and in

Brookline into three. All of these neighborhoods are shown in Figure 4-1. In the table, for trips originating from outside of Massachusetts, the city and the state are given.

The neighborhood names and boundaries used in the survey databases conform to definitions that have been used by CTPS in previous surveys, and they do not all match the names used by survey respondents. For example, locations reported as "Chinatown" in survey responses were included in "Boston: Park Square" in the databases.

The table for each entry station shows a maximum of 18 origins (in rows) and 10 destinations (in columns). For each station, the origins included are those with the largest total numbers of reported trip beginnings, regardless of reported destination. The rows of origins are arranged in descending order of size. Any origins below the top 18 are combined as "Other" in a nineteenth row.

Similarly, the destinations included in each table are those with the largest total numbers of trip ends, regardless of reported origin. The columns of destinations are arranged in descending order of size. Any origins below the top 10 are combined as "Other" in an eleventh column.

At each entry station, the destination most frequently reported by all riders combined was often, though not always, the same as the one most frequently reported by the riders who were coming from the most frequently reported origin. Therefore, the most common origin-destination pair was often, though not always, the one in the first column of the first row in the table.

The entries in the "Other" row and "Other" column show, both in absolute numbers and in percentages, the importance, respectively, of origins not shown for each destination listed and of destinations not shown for each origin listed. If information on specific "other" origins or destinations is desired, custom reports can be generated.

### 10.2 OVERVIEW OF RESULTS

This overview will begin with the non-downtown stations and will proceed from the outermost stations inward. At Wonderland, Revere Beach, and Beachmont, the most common origin-destination pair was Revere to the Financial/Retail District. It accounted for $7 \%, 10 \%$, and $21 \%$, respectively, of the trips entering at these stations. Revere to Government Center was the second-largest origin-destination pair from Revere Beach (10\%) and Beachmont (17\%), but Lynn to Financial/Retail was second from Wonderland (6\%), followed by Lynn to Government Center (5\%).

At Orient Heights, the top origin-destination pairs were Winthrop to Financial/Retail (15\%), Winthrop to Government Center (11\%), and East Boston to Government Center (6\%). At each of the other four stations in East Boston, the two most common origin-destination pairs were East Boston to Government Center and to Financial/Retail. Government Center was ahead of

Financial/Retail at Suffolk Downs (13\% vs. 7\%) and Wood Island (15\% vs. $11 \%)$. East Boston to Financial/Retail was ahead of East Boston to Government Center at Airport (20\% vs. 15\%) and at Maverick ( $16 \%$ vs. $15 \%$ ).

The results from the downtown Blue Line stations are based on smaller sample sizes than those from non-downtown stations; therefore, their degree of accuracy is necessarily lower. The largest shares of origin-destination pairs, as might be expected, started from the nearest neighborhoods and ended at either East Boston or Revere. At Aquarium, trips to East Boston from the Waterfront and North End neighborhoods were equivalent, at 7\% each. At State, the top pairs were Financial/Retail to East Boston (15\%) and to Revere (9\%). At Government Center Station, trips from the Government Center neighborhood to East Boston and to Revere were first and second, respectively, at $20 \%$ and $15 \%$. The top two pairs at Bowdoin were Beacon Hill to East Boston (12\%) and to Revere (7\%).

## Socioeconomic

 CharacteristicsThis chapter presents data on the age, gender, income, and ethnicity of Blue Line riders. Tables (at the end of the chapter) present these data by station. For each station, three tables presenting, respectively, the age, gender, and income data are grouped on one page. Ethnicity data for that station's riders are shown in two tables on the following page. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 11.1 AGE OF RIDERS

### 11.1.1 DESCRIPTION OF TABLE

The first table for each station summarizes the results from survey question 16, "What is your age?" It shows the number of riders and the percent of riders relative to the station total (excluding "no answer") in each of six age groups: 18 or under, 19 to 24,25 to 34,35 to 44,45 to 64 , and 65 or over. It also gives the cumulative percentages that result as one adds each age group to the ones preceding it in the table.

### 11.1.2 Overview of Results

Across the Blue Line, most respondents were between the ages of 25 and 64. Leaving out State and Government Center Stations, 83\% of the responding population belonged to this age group. Members of the work force are most likely to be somewhere in this age range, and, indeed, $85 \%$ of the riders boarding at non-downtown stations reported work or work-related trip purposes (see Chapter 3 for a full discussion of trip purposes). In contrast, nearly $30 \%$ of the riders who boarded at State and Government Center were under the age of 25 or over 64. Only $65 \%$ of the riders entering those two stations had work or work-related trip ends.

Overall, the 45-to-64 age bracket had the highest share of riders (38\%), whereas the 25 -to- 34 bracket was the highest at Maverick (32\%) and Airport (38\%). The large share of 45-to-64-year-old respondents is partially due to the
size of the age brackets. The 45-to-64 age bracket covers 20 years, while the 25-to-34 bracket only covers 10 .

The percentages of responses in the 19-to-24 category varied widely among stations. The highest percentages were observed at Suffolk Downs (14\%), Government Center (13\%), and State (12\%). The lowest were observed at Bowdoin (3\%), Wonderland (4\%), and Aquarium (5\%).

On the Blue Line overall, only $1 \%$ of survey respondents were age 18 or under. This group exceeded 2\% only at Suffolk Downs (3\%) and Wood Island (4\%). Among the respondents in this age group, 78\% were making home-based school trips. Comparisons with fare data indicate that riders in this age group are generally underrepresented in MBTA passenger surveys owing to a low response rate.
At the other end of the spectrum, the percentages of riders age 65 and older varied between the downtown and non-downtown stations. This age bracket accounted for $15 \%$ to $19 \%$ of the responses at the downtown stations but for only $3 \%$ to $11 \%$ at the non-downtown stations. Of the older riders entering at the downtown stations, about one-third were making trips to one of the other downtown stations. Many of the younger riders would likely have walked rather than taking the Blue Line for similar trips.

### 11.2 GENDER OF RIDERS

### 11.2.1 DESCRIPTION OF TABLE

The gender table for each station summarizes the responses to survey question 20, "What is your gender? (For example: Male, Female)," with space for a write-in answer. The open-ended format of the question allowed survey respondents to self-identify as transgender. The table displays, for each gender, the number of riders and the percentage of the total number of riders who answered the question.

### 11.2.2 OVERVIEW of Results

At each of the non-downtown stations except Airport and Revere Beach, female riders outnumbered male riders. At Airport they made up $47 \%$ of the ridership, at Revere Beach 50\%. The highest percentage of female respondents was $67 \%$, at Wood Island.

Female respondents also outnumbered males at almost all of the downtown stations, the exception being Government Center. The percentage of females ranged from $43 \%$ at Government Center to $58 \%$ at Aquarium.

A few surveys were returned by transgender riders at the stations between Beachmont and Wood Island. The maximum percentage of transgender riders per station was $2 \%$; the percentages were based on one returned survey per station.

### 11.3 ANNUAL HOUSEHOLD INCOME

### 11.3.1 Description of Table

Each station's table on annual household income summarizes the responses to survey question 19, "What is your annual combined household income?" The survey form provided eight income-range choices: "under \$20,000," "\$20,000\$29,999," "\$30,000-\$39,999," "\$40,000-\$49,999," "\$50,000-\$59,999," "\$60,000-\$74,999," "\$75,000-\$99,999," and "\$100,000 or more." The table shows the number and percent of riders who checked each income range, as well as giving the cumulative percentages that result as one adds each income group to the ones preceding it in the table. Riders who did not answer this question are not reflected in the percentages. Below this table is a line that reports the average household size for riders at the station.

### 11.3.2 OvERVIEW of Results

The results regarding household income varied considerably among stations. The stations with the highest percentages of incomes in the $\$ 100,000$-or-more range were Aquarium (47\%), Wonderland (37\%), and Bowdoin (29\%). The stations with the lowest percentages in this range were Revere Beach (8\%), Maverick (15\%), Government Center (20\%), and Beachmont (20\%). At Revere Beach, 25\% reported household incomes of under \$20,000.

At all of the stations except Revere Beach, the \$100,000-or-more range had a larger percentage than any other individual range. This result could be skewed, as a significant number of riders elected not to answer the household income question.
It might be expected that household income would be related to some extent to household size, which was asked for in the survey (not asked for was the number of household members who were employed). However, the results were somewhat mixed. Overall, Blue Line riders with household incomes of $\$ 100,000$ or more had an average household size of 2.7, while those with household incomes of under $\$ 20,000$ had an average household size of 2.4. However, Aquarium, which had the lowest average household size (2.15), also had the highest percentage of household incomes in the $\$ 100,000$-or-more range. Revere Beach, which had the highest average household size (2.69), had the lowest percentage of household incomes in the top range.

### 11.4 ETHNICITY OF RIDERS

### 11.4.1 DESCRIPTION OF TABLES

For each station, ethnicity is reported using two tables. The first summarizes the results from survey question 21a, "How do you self-identify by race?" Six check-off choices were provided: "American Indian or Alaska native," "black or African-American," "native Hawaiian or other Pacific islander," "Asian," "white," and "other" with space for write-ins. These categories were those used
in the U.S. census. Respondents were instructed to check as many as applied. The table shows the number and percent of responses for each race category. Because riders were allowed to check more than one box, percentages generally add up to more than $100 \%$.
The second table shows the results from survey question 21b, "Are you Hispanic/Latino?", which provided the check-off options "yes" and "no." The table shows the number and percent of "yes" and "no" responses. The data reported in this table are independent of those in the preceding table. Riders who self-identified as Hispanic or Latino in question 21b could have checked any of the races listed in question 21a. Of those who checked "yes" for question 21b, 65\% checked "other," 30\% checked "white," and 5\% checked "black or African-American" in question 21a.

### 11.4.2 Overview of Results

The majority of riders who entered the rapid transit system at a Blue Line station were white ( $80 \%$ ). The station with the largest percentage of white riders was Aquarium (91\%). The station with the largest percentage of nonwhite riders was Revere Beach, where $65 \%$ of the riders self-identified as white, $14 \%$ as black or African-American, $7 \%$ as Asian, and $17 \%$ as "other." Most of the riders who checked "other" also checked that they were Hispanic/Latino. As in the table, each of the percentages given in this discussion for a race includes any respondents who checked not only that race but one or more others as well.

The stations with the largest percentages of riders who answered "yes" as to whether they were Hispanic/Latino were Maverick (24\%) and Airport (21\%). Orient Heights and Aquarium were the stations with the lowest percentage of Hispanic/Latino riders, with 7\% at each station.

This chapter's tables begin on the following page.

The data in this chapter show how frequently Blue Line riders used the service. They also show how riders paid their fares and how frequently the users of each fare type rode the line.
The tables (at the end of the chapter) present data by station. For each station, two tables are grouped on one page, and a third table appears on a second page. The first table shows the number of days per week riders used the Blue Line; the second shows their weekend use patterns. The third table shows how many riders used each fare type and how often the users of each fare type rode the Blue Line. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station.

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 12.1 NUMBER OF DAYS USED PER WEEK

### 12.1.1 Description of Table

The first table for each station summarizes the results of survey question 11, which asked how many days a week riders used the Blue Line. Nine check-off boxes were provided on the survey form: one for each possible number of days per week, plus "less than 1 day" and "I'm only visiting Boston." For each usage level, the table shows the number and percent of riders; it also gives the cumulative percentages that result as one adds each category of user to the ones preceding it in the table.

### 12.1.2 Overview of Results

At every station along the Blue Line the most common reported usage frequency was five days per week. For the line overall $52 \%$ of the riders reported five-day use. Some of those who checked six- or seven-day use also indicated that they used weekend service on one or both days occasionally rather than regularly, which would put their average usage closer to five days.

Therefore, in the following comparisons of reported usage by station, the category of five or more days is used instead of five days.

On the Blue Line overall, $75 \%$ of the riders reported usage rates of five or more days per week. At the non-downtown stations, these rates ranged from $70 \%$ to $80 \%$, except at Beachmont (84\%) and Maverick (87\%). Reported usage rates at the downtown stations varied more. Bowdoin had the lowest rate of five-day-or-more usage, at $42 \%$, followed by Aquarium at $44 \%$. Bowdoin is closed after 6:00 PM on weekdays and all day on Saturdays and Sundays, so those reporting usage over five days would have been referring to alternate stations.

At Aquarium, nonwork trips, which tend to be repeated less frequently, accounted for a greater-than-average share of riders. That station had the highest rate of less-than-one-day usage (18\%) and the second-highest rate of "only visiting" (6\%), compared to the line averages of $6 \%$ and $2 \%$, respectively, for these measures.

### 12.2 WEEKEND USAGE

### 12.2.1 Description of Table

The weekend usage table for each station summarizes the results of survey question 12, which asked how frequently riders used the Blue Line on Saturdays and Sundays. For each weekend day, riders could check one of three frequency-of-use categories: regularly, occasionally, or not at all.

In the table, Sunday usage categories are displayed across the top of the table, and Saturday down the left side. The table cells show cross-tabulated data for Saturdays and Sundays. For example, the cells in the first data row show the numbers and percentages of Sunday riders, by usage category, who used the Blue Line regularly on Saturday. Likewise, the cells in the first data column show the numbers and percentages of Saturday riders, by usage category, who used the Blue Line regularly on Sunday.

The far-right column shows the total numbers and percentages of Saturday riders by usage category, and the bottom row shows the same for Sunday. These totals reflect only riders who described their usage for both Saturday and Sunday.

### 12.2.2 Overview of Results

For the Blue Line overall, the most frequently reported combinations of Saturday and Sunday usage were occasional use on both days (46\%), followed by no use on either day (24\%) and regular use on both days (16\%). The latter figure was higher than the $12 \%$ who reported seven-day-per-week usage in the first table, indicating that some regular Saturday and Sunday users used weekday service less than five days per week.

The stations with the highest reported regular usage on both Saturday and Sunday were Government Center (28\%), Maverick (24\%), and Revere Beach
(21\%). No riders reported that they were regular Sunday users unless they were also at least occasional Saturday users. Less than 1\% overall reported that they were regular Saturday users but did not use Sunday service at all. Revere Beach, at $3 \%$, was the only station with more than $1 \%$ reporting this combination.

### 12.3 FARE TYPES AND PASS USAGE

### 12.3.1 DESCRIPTION OF TABLE

The third table for each station, on a separate page, presents three data points for each fare type: the number of riders using the fare type, the percentage of riders using the fare type, and the number of days per week that the riders using each fare type rode the Blue Line.

The first two columns are based on the results of survey question seven: "What type of fare did you pay for this rapid transit trip?" Ten check-off choices were provided, including "other" with space for write-ins. Riders using commuter rail monthly passes could also write in the zone number. The data in the third column are based on the assumption that each rider used the fare payment type reported in question seven on the same number of days per week that the rider reported using the Blue Line in question 11.

### 12.3.2 Overview of Results

## Mix of Fare Types

For the Blue Line overall, the most common method of fare payment was some form of monthly pass, reported by $60 \%$ of all riders. Pay-per-ride using a CharlieCard was second, at $24 \%$ overall. Monthly pass use was also most common at each station except Aquarium and Bowdoin, where pay-per-ride CharlieCards were slightly ahead (38\% to $37 \%$ and $42 \%$ to $41 \%$ ). At the nondowntown stations, percentages of monthly pass use ranged from $56 \%$ at Revere Beach to $67 \%$ at Wonderland. Monthly pass use was slightly below the line average at Government Center (56\%) and further below at State (49\%). The lower pass use rates at the downtown stations were related to the lower average frequency of travel there, as riders who travel most frequently have the most incentive to pay the fixed cost of passes rather than paying per trip.
By far the most commonly used type of monthly pass was the LinkPass for subway and bus, which was reported by $54 \%$ of the Blue Line riders. This was the minimum monthly pass level required on the rapid transit system (whether or not the passenger also needed to use a bus) for a passenger who would have paid full fare if paying per ride. The next-most-common reported monthly pass category, reported by $2 \%$ of the riders was Zone passes. These are used by passengers who also use MBTA commuter rail or Inner Harbor ferry services. Senior monthly passes, used by riders over age 65, were reported by just over $1 \%$ of Blue Line riders, with Student and Disability monthly passes accounting for under 1\% each.

After monthly passes and pay-per-ride using CharlieCards, the two most common fare types overall, with 6\% each, were 7-day LinkPasses and reducedfare pay-per-ride (including Student, Senior, and Disability). The percentages of riders using either of these types varied considerably among stations. No riders entering Government Center reported use of 7-day LinkPasses, but at other stations shares ranged from 2\% (at Wonderland) to 11\% (at Maverick).

Reduced-fare pay-per-ride use by station ranged from 1\% (at Airport) to 11\% (at Revere Beach), except at State, where it was 20\%. The latter figure included $12 \%$ Senior and $8 \%$ Disability fares and reflected above-average percentages of riders eligible for such fares among users of that station. Blue Line-wide, pay-per-ride reduced fare was the fare type for $6 \%$ of the riders; 4\% paid Senior fares, nearly 2\% Disability fares, and under 1\% Student fares.

## Usage Rates by Fare Type

As discussed above, the final column of the Fare Types and Pass Usage table shows the average number of days per week that riders reporting use of each fare type used the Blue Line.

## Pay-per-Ride CharlieCard

The CharlieCard, a plastic card containing a radio-frequency identification (RFID) chip, was launched in 2006. The user can simply tap the pass on a reader to pay a fare. At the time of the survey, riders who used the CharlieCard to pay-per-ride paid $15 \%$ less per ride than those who used the paper CharlieTicket ( $\$ 1.70$ versus $\$ 2.00$ ). Using the CharlieCard also took less time than paying using a CharlieTicket. Average usage frequency for CharlieCard users by station ranged from 3.0 days per week at Bowdoin to 4.8 days per week at Wood Island; the overall Blue Line average was 4.0 days .

## Pay-per-Ride CharlieTicket

The CharlieTicket, a paper ticket with a magnetic strip, has been in use since early 2005. On the Blue Line, the average usage rate by station of the CharlieTicket to pay-per-ride ranged from 0.5 days per week at Suffolk Downs to 4.2 days per week at Maverick; the overall line average was 3.2 days.

## Monthly Pass

Monthly passes, which allow unlimited use, typically show higher average usage rates than pay-per-ride options, because the most frequent riders have the most incentive to purchase such passes. On the Blue Line, the average usage rate for all monthly pass forms combined was 5.1 days per week. Average usage by station ranged from 3.9 days, at Bowdoin (which is not open on weekends or after 6:00 PM on weekdays), to 5.8 days, at Government Center. At other Blue Line stations, the monthly pass usage rates differed only slightly from the line average, except for lower rates at State (4.0) and Aquarium (4.2).

## Full Cash Fare On-Board Trolley

This fare type does not apply to rapid transit trips that begin on the Blue Line (it is applicable only to trips beginning at Green Line surface stops or stations on the Mattapan High-Speed trolley line).

## Reduced Fare

This category includes pay-per-ride reduced fares for students from age 12 through high school, for seniors (age 65 and over), and for passengers with disabilities. Monthly passes for riders eligible for reduced fares are included in the data for monthly passes. On the Blue Line overall, the users of pay-per-ride reduced fares used them an average of 4.0 days per week. Average usage by station ranged from 2.4 days at Aquarium to 6.0 days at Airport. (The Airport result is not very reliable, as it was based on responses from only two riders.)

## Child Under Age 12 Free Fare

Children under age 12 seldom fill out passenger surveys, so little information is available about riders in that group. The sample size of riders reporting "Child Under Age 12 Free Fare" was exceptionally low: only two on the entire Blue Line. Both respondents reported that they used the Blue Line 5 days per week.

## Blind Access Card

Only one survey was returned by a Blue Line rider using a Blind Access Card as the fare type. That respondent entered at Maverick and rode the Blue Line 7 days per week.

## 1-Day LinkPass

None of the survey returns from the Blue Line reported use of the 1-Day LinkPass.

## 7-Day LinkPass

For the Blue Line overall, the average reported usage rate of the 7-Day LinkPass was 5.7 days per week, which exceeded the rates of all other fare types for which a large sample size was obtained. (The 7-Day LinkPass had the third-largest sample size.) Average usage rates at individual stations ranged from 4.6 days per week, at Suffolk Downs, to 7.0 days per week, at State and Bowdoin.

## Other

On the rapid transit system overall, most riders who checked the box for "other" fare type and also wrote in which type, were authorized free riders, including MBTA employees. On the Blue Line, only one returned survey had the "other" fare type checked, and it included no further detail. This respondent rode 5 days per week.

The four types of data presented in this chapter describe the potential for Blue Line riders to have used personal vehicles (autos, trucks, or motorcycles) as alternatives to the trips they were making when surveyed. More specifically, the survey asked whether or not riders were licensed to drive, how many vehicles were owned by the riders' households, and whether these vehicles were available for use by the riders. Per capita vehicle ownership was calculated from the answers to the household vehicle ownership question and the household size question (for the latter, see Chapter 11).
The tables (at the end of the chapter) present these data by station. For each station, four tables presenting the four respective types of data are grouped on a single page. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station. Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 13.1 LICENSED DRIVERS

### 13.1.1 Description of Table

Each station's table on licensed drivers shows both the numbers and percentages of Blue Line riders who are licensed and not licensed to drive a vehicle. Also shown is the number of survey respondents who did not answer the question; however, the percentages in the table exclude riders who did not respond.

### 13.1.2 Overview of Results

Most Blue Line riders at every station were licensed to drive. For all Blue Line stations combined, $84 \%$ of survey respondents were licensed.

The lowest percentage of riders with licenses was at Revere Beach (73\%), the second-lowest at Maverick (79\%). Revere Beach also had the highest percentages of riders in lower-income and ethnic-minority groups. Maverick, compared with the rest of the line, had a greater-than-average proportion of riders in the two lowest age ranges (under 18 and 19 to 24 ) and a slightly
higher-than-average percentage of lower-income riders. These socioeconomic characteristics (reported in Chapter 11) may help explain the low licensure rates at Revere Beach and Maverick.

At the other extreme, the highest percentage of riders who were licensed to drive was at Wonderland (93\%). That station had the second-highest proportion of riders with household incomes over $\$ 100,000$. Wonderland also had the highest percentage of riders using park-and-ride access (64\%).

### 13.2 USABLE VEHICLES PER HOUSEHOLD

### 13.2.1 Description of Table

Each station's table showing usable vehicles per household summarizes the results of survey question 15a, which asked how many usable vehicles (including autos, trucks, and motorcycles) riders' households had. Respondents could check one of four boxes that corresponded to zero, one, two, and three or more vehicles. The table shows the number and percentage of riders who checked each choice. Riders who did not answer this question are not counted in the percentages.

### 13.2.2 Overview of Results

Consistent with its high rates of licensed drivers and park-and-ride access, Wonderland, of all the stations, had the highest number of vehicles owned per household. Of its riders, $54 \%$ had two or more household vehicles, $38 \%$ had one, and only $7 \%$ had none. On the Blue Line overall, $31 \%$ of the riders had two or more vehicles per household, $46 \%$ one vehicle, and $24 \%$ no vehicle.

The stations with the largest percentages of riders with no household vehicle were State (36\%), Airport (36\%), and Maverick (35\%). At Airport, excluding riders with trip origins at Logan Airport, $40 \%$ of the riders were from households with no vehicle.

### 13.3 RIDERS WITH A HOUSEHOLD VEHICLE AVAILABLE FOR THE TRIP

### 13.3.1 DESCRIPTION OF TABLE

Each station's table on vehicle availability for the surveyed trip summarizes the results for question 15b, which asked if the rider could have used a household vehicle instead of riding the Blue Line on the day of the survey. The numbers and percentages of riders who responded "yes" and "no" to the question are shown in the table. Riders who did not answer the question were not counted in the percentages.

### 13.3.2 Overview of Results

The station with the highest percentage of riders with an available vehicle was Wonderland (73\%), followed by Government Center (69\%), Aquarium (67\%),
and Beachmont (62\%). These riders most likely used the Blue Line by choice, since they did not use their available vehicles instead. The stations with the lowest percentages of vehicle availability were Revere Beach (65\%), Airport (61\%), and Maverick (60\%). Some riders without household vehicles available had other options besides the Blue Line. However, $44 \%$ of those who reported that they did not have household vehicles available also checked off "only transportation available" in question 22 as one of their reasons for using MBTA rapid transit service.

### 13.4 VEHICLES OWNED PER CAPITA

### 13.4.1 Description of Table

For each station's table on per capita vehicle ownership in the survey respondents' households, that rate was calculated by dividing the number of usable household vehicles reported in question 15a by the household size reported in question 18. The table presents six ownership ranges: no vehicles, 0.01 to 0.49 vehicles, 0.50 to 0.99 vehicles, 1.00 to 1.49 vehicles, 1.5 to 1.99 vehicles, and 2 or more vehicles. For each range, the table shows the number and percent of riders; it also gives the cumulative percentages that result as one adds each category of user to the ones preceding it in the table. Riders who did not answer both question 15a and question 18a were not included in the calculations.

### 13.4.2 OVERVIEW OF Results

On the Blue Line overall, $27 \%$ of entering riders came from households with 1.0 or more vehicles per capita. The station with the highest percentage of such riders was Government Center (54\%), but this was based on a relatively small sample. Wonderland was second, with $42 \%$ of the riders coming from households with 1.0 or more vehicles per capita. Revere Beach had the lowest rate of such riders (15\%), followed by Airport (17\%), State (18\%), and Maverick (19\%).

Although households with no vehicles would also have no vehicles per capita, the latter value in this table differs slightly from the value for the former (in a preceding table), because some riders who reported that their household had no vehicles did not answer the household size question (and therefore are not included in the present table, as has been explained).

The data in this chapter summarize the ratings that riders who began their rapid transit trips at Blue Line stations gave to MBTA service quality in terms of 11 measures that were listed in question 24 on the survey form. The question asked for the riders' feelings "about MBTA rapid transit service," as opposed to Blue Line service in particular. This question differed from the others on the form in that it dealt with subjective opinions rather than objective characteristics of riders and their trips.

There may be some bias in the results, for two reasons. Riders with strong positive or negative opinions of service may have been more inclined to complete question 24 than those without strong opinions. Also, the survey did not capture opinions of potential riders who do not use the Blue Line because of strong negative perceptions of one or more service attributes.

After rating the 11 listed service attributes, respondents were asked to indicate which three were most important to them. Based on the weighted number of survey forms on which each attribute was marked as one of the most important, one of the following importance levels was assigned to each attribute: very low (first quartile), low (second quartile), moderate (third quartile), and high (fourth quartile). The results vary from station to station; significant variations are noted in the text. It should be noted that these are relative importance levels. Each rider indicated only which three attributes were most important. It does not necessarily follow that the other attributes were unimportant to that rider-they were simply not as important as the top three.

The 11 attributes and the ratings they received are discussed below in the order in which they appeared on the survey form. The importance level of each attribute is given in its section heading. Tables (at the end of the chapter) present the service quality data by station. For each station, one table presents both the ratings and importance rankings for each of the service quality measures. The data for each station are based on the survey responses from riders who started the rapid transit portions of their trips at that station.

Chapter 2 addresses the same categories of data that are addressed in the present chapter, but at the level of the Blue Line as a whole. It includes tables and discussion.

### 14.1 DESCRIPTION OF TABLE

Respondents ranked the quality of 11 attributes of MBTA rapid transit service on a scale from poor (1) to excellent (5) and also indicated which three of the 11 attributes were most important to them. The table for each station gives, for each attribute, the percent of respondents at that station who checked each of the ratings (excluding those who gave no ratings), and it also gives the average rating. The final column in the table shows the number of riders who checked each attribute as one of the three most important.

### 14.2 OVERVIEW OF RESULTS

Reliability (On-Time Performance) Relative Importance: High
Of all the riders entering Blue Line stations combined, 83\% gave "reliability (on-time performance)" a rating of 3 (designated "average" on the survey form) or better, as did at least 77\% of those entering at each individual Blue Line station. The average of all the Blue Line riders' ratings was 3.3 on the scale of 1 to 5 . The stations where riders gave the lowest average ratings were Maverick and State (3.2 at each), and the highest average rating was given at Government Center (3.9).

Reliability ranked as the most important measure of service quality at every station except Suffolk Downs, where it was second, slightly below personal safety.

## Safety and Security Relative Importance: High

Of all the passengers entering Blue Line stations combined, $90 \%$ gave "safety and security" a rating of 3 or better on the scale of 1 to 5 , as did at least $84 \%$ of those entering at each individual Blue Line station. The average rating was 3.6. This was the second-highest average rating given by Blue Line riders to any of the 11 attributes. The station where riders gave the lowest average rating for safety/security was Revere Beach (3.4), and the highest was given at Government Center (4.1).

Safety/security ranked as the third-most-important measure of service quality, based on the overall response of Blue Line riders, and was second or third at each individual station except Suffolk Downs, where it was first.

## Cleanliness/Condition of Vehicles Relative Importance: Medium

Of all the riders entering Blue Line stations combined, 79\% gave
"cleanliness/condition of vehicles" a rating of 3 or better on the scale of 1 to 5, as did at least $71 \%$ of those entering at each individual Blue Line station. The average rating was 3.2. This was the fourth-lowest average rating given by Blue Line riders to any of the 11 attributes. The station where riders gave the lowest average rating for this attribute was Maverick (3.0), and the highest was given at Suffolk Downs (3.6).

Cleanliness/condition of vehicles ranked as the fifth-most-important service attribute, based on the overall response of Blue Line riders, and was fifth or sixth at each individual station except Aquarium, where it was fourth.

## Courtesy of Train Crews Relative Importance: Low

Of all the passengers entering Blue Line stations combined, 79\% gave "courtesy of train crews" a rating of 3 or better on the scale of 1 to 5 , as did at least $71 \%$ of those entering at each individual Blue Line station. The average rating was 3.3. The station where riders gave the lowest average rating for courtesy was Airport (3.0), and the highest was given at Bowdoin (3.8).
Courtesy ranked as the seventh-most-important service attribute, based on the overall response of Blue Line riders, and ranged from fifth at State to last at Government Center. Blue Line riders have relatively little direct contact with train crews, as each train is staffed by only one person, who is located in an enclosed cab. Some respondents may have been rating Customer Service Agents in stations rather than train operators.

## Announcement of Stations Relative Importance: Very Low

Of all the riders entering Blue Line stations combined, 85\% gave "announcement of stations" a rating of 3 or better on the scale of 1 to 5 , as did at least $77 \%$ of those entering at each individual Blue Line station. The average rating was 3.7 , making it the highest-rated of the 11 service attributes listed. The stations where riders gave the lowest average ratings for announcement of stations were Maverick and Airport (3.5 at each), and the highest were given at Suffolk Downs and Revere Beach (3.9 at each).

Station announcements are prerecorded and are activated automatically as trains approach and arrive at stations, so they are very consistent. It is likely that during the period in which that technology has been in place many riders have come to take announcements for granted and that this is why they ranked only tenth in importance, based on the overall response of Blue Line riders. At individual stations, announcements ranked between ninth and eleventh except at Revere Beach (seventh) and at Government Center, where they were in a four-way tie for sixth.

Among all the segments of the population of surveyed riders that can be identified, given the data collected, the respondents with Blind Access Cards would have the greatest need for audible announcements. The sample size from this group on the Blue Line alone was too small to allow meaningful conclusions to be drawn. For the entire rapid transit system, passengers with Blind Access Cards rated announcement of stations 2.7 on average, with only $66 \%$ giving ratings of 3 or better. For this group, this was the sixth-mostimportant service attribute.

## Availability of Seating on Trains Relative Importance: Medium

Of all the passengers entering Blue Line stations combined, 72\% gave "availability of seating on trains" a rating of 3 or better on the scale of 1 to 5 , as did at least $65 \%$ of those entering at each individual Blue Line station. The average rating was 3.0, making this the second-lowest rated of the 11 service attributes listed.

Riders boarding trains near the outer endpoints of any line have the best chance of getting seats and would therefore be expected to rate seating availability more favorably than those boarding closer to the maximum load points. On the Blue Line, during the survey hours, loads on most trains would have been heaviest between Maverick and Aquarium inbound.

Average ratings of seating availability ranged between 3.3 and 3.0 at the stations from Wonderland to Suffolk Downs and from Aquarium to Bowdoin but only between 2.8 and 2.9 from Orient Heights to Maverick. Among passengers entering Maverick, where inbound loads would be the highest, 35\% rated seating availability as poor or below average, compared with $21 \%$ of passengers entering Aquarium, where passenger loads would start to lighten.

Seating availability on trains ranked sixth in importance among the 11 attributes, based on the overall response of Blue Line riders, and ranged from fifth to seventh at individual stations. Given the relatively low ratings, described above, of this attribute, one might have expected riders to give it a higher relative-importance ranking, reflective of a desire for more seating availability.

## Frequency of Service Relative Importance: High

Of all the riders entering Blue Line stations combined, $82 \%$ gave "frequency of service" a rating of 3 or better on the scale of 1 to 5 , as did at least $76 \%$ of those entering at each individual Blue Line station. The average rating was 3.3.

At the time the survey was conducted, the frequency of service was the same at all stations. Nevertheless, there were some differences in ratings among stations, with averages ranging from 3.1 at Maverick to 3.6 at Bowdoin, Government Center, and Suffolk Downs. The lower rating of frequency at Maverick appears to have been related to the lower satisfaction with seating availability there: among the riders who rated seating availability as poor or below average, frequency got a rating of 2.7.

Frequency ranked as the second-most-important of the 11 service attributes, based on the overall response of Blue Line riders, trailing only reliability. It also ranked second at seven of the individual stations, and it came in third at the other five. (When frequency was third, safety/security was second.)

## Travel Time/Speed Relative Importance: Medium

Of all the passengers entering Blue Line stations combined, 85\% gave "travel time/speed" a rating of 3 or better on the scale of 1 to 5 , as did at least $80 \%$ at
those entering at each individual Blue Line station. The average rating was 3.4. This was the fourth-highest average among the 11 attributes rated. Average ratings at individual stations ranged from 3.3 at Airport to 3.9 at Bowdoin. Wonderland, Revere Beach, and Beachmont each had a rating of 3.4. As these are the three outermost stations on the line, the trips from these stations have the longest average travel distances and therefore the longest average travel times.

Travel time/speed ranked as the fourth-most-important of the 11 attributes, based on the overall response of Blue Line riders. It was also fourth at nine of the stations, and it tied for third at the other three.

## Parking Availability Relative Importance: Low

Many Blue Line riders who did not use park-and-ride access expressed an opinion about "parking availability." Overall, only 22\% of Blue Line riders accessed their stations by driving and parking (see Chapter 2); however, 61\% of the line's riders provided a rating for parking availability. Some of those who rated parking but did not drive might have preferred to drive if more parking had been available or might have observed that lots were full as they approached their stations by whatever means they used.
Among the Blue Line riders who did rate parking availability, the average rating was 3.1 on the scale of 1 to 5 . This was the third-lowest average rating among the 11 attributes. In general, parking availability was rated lowest by riders entering stations with little or no dedicated Blue Line parking. These included Maverick (2.7), Airport (2.8), State (2.9), and Revere Beach (3.0). Wonderland, which has the most dedicated parking capacity on the line, had the highest average rating by entering riders for parking availability (3.6). Average ratings of 3.6 were also given by riders entering Suffolk Downs, which has some parking, and Government Center, which has none. The latter figure was pulled up by riders who were returning to stations that did have parking.
Parking availability ranked eighth in importance among the 11 attributes, based on the overall response of Blue Line riders. Some potential riders for whom it would have been very important probably chose not to use the Blue Line. Based only on the responses of the riders who rated the quality of parking availability, this attribute's importance ranking is seventh. Based only on the responses of those who drove to their boarding stations as well as rated parking availability, its importance ranking was fifth.

## Station Amenities Relative Importance: Very Low

Of all the passengers entering Blue Line stations combined, $60 \%$ gave "station amenities" a rating of 3 or better on the scale of 1 to 5 , as did at least $56 \%$ of those entering at each individual Blue Line station. The average rating was 2.7. This was the lowest of all the average ratings of the 11 attributes rated. Station amenities also had the lowest rating at every individual Blue Line station. Among the stations, the lowest average rating (2.4) was given at Orient

Heights, which has had the least modernization of all the stations on the line. However, the highest rating was only 2.9, given at Revere Beach Station, which is among those more recently upgraded.
This attribute ranked lowest in importance among the 11, based on the overall response of Blue Line riders, and ranked no higher than eighth at any individual Blue Line station. In terms of respondents’ providing any rating for a given attribute, station amenities were the second-most-neglected attribute, with $19 \%$ of the respondents giving them no rating.
It is worth noting that, as "amenities" is subject to interpretation, there were presumably some variations among riders' ideas of what they were rating.

## Fare Collection System Relative Importance: Very Low

Of all the riders entering Blue Line stations combined, 82\% gave "fare collection system" a rating of 3 or better on the scale of 1 to 5 , as did at least $77 \%$ of those entering at each individual Blue Line station. Blue Line-wide, the average rating was 3.5 ; this was the third-highest average rating among the 11 attributes. At the station level, the average ratings of the fare collection system were also among the highest, ranging from 3.4 to 3.8.

All Blue Line stations use the same fare collection system, consisting of electronic fare cards that are used to open automatic fare gates at the station entrances. Differences in ratings by station could result in part from differences in the numbers of fare gates and vending machines for fare cards relative to the numbers of riders entering the stations.

Blue Line riders' ratings of the fare collection system varied according to the riders' fare type. It was given an average rating of 3.5 by users of monthly passes, pay-per-ride CharlieCards, and pay-per-ride CharlieTickets, of 3.8 by users of pay-per-ride reduced fares, and of 3.3 by users of seven-day Link Passes.

The fare collection system ranked as the ninth-most-important of the 11 attributes, based on the overall response of Blue Line riders. At the station level, its importance ranking ranged from seventh to eleventh, except that at Government Center it was in a four-way tie for sixth.

## APPENDIX A

## Survey Distribution, Response, Processing, and Expansion

## A. 1 SURVEY DISTRIBUTION STRATEGIES

## A.1.1 Time Span of Survey Distribution

The first step in designing the distribution strategy was determining the time span of the survey distribution. Except for the commuter rail system, the time spans used in the 2008-09 surveys were the same as those used in the most recent previous surveys on each mode. In the 1994 rail rapid transit, 1995 bus, and 2000 water transportation surveys, forms were distributed between approximately 6:00 AM and 3:00 or 3:30 PM to passengers traveling in either direction. This strategy was based on experience from a systemwide survey conducted in 1978, when forms were distributed over the entire service day. Response rates to that survey showed sharp declines after 3:30 PM. In devising the distribution plan for the 1994 survey and subsequent surveys, CTPS examined patterns in MBTA ridership counts and concluded that close to $85 \%$ of the passengers who used most services on a given day traveled in at least one direction before 3:30 PM. Consequently, with thorough coverage before 3:30, the majority of riders boarding after 3:30 would already have had an opportunity to receive survey forms earlier in the day.
The strategy for the 1993 commuter survey had been developed earlier, and consisted of distributing surveys on all inbound trains scheduled to arrive in Boston on each line between approximately 6:00 AM and midnight, but no distribution on outbound trains. For consistency, the 1998 Old Colony commuter rail surveys used the same distribution strategy as the 1993 surveys. However, in planning the 2008-09 commuter rail surveys, CTPS concluded that distribution on trains in both directions between about 6:00 AM and 3:30 PM, similar to the strategy to be used on other modes, would be more efficient and would produce satisfactory results.

The strategy used on all modes in 2008-09 did not reach riders whose entire trips were made after 3:30 PM. Some common purposes for trips beginning after that time would include travel to night-shift jobs, to evening classes, to
theaters, and to sporting events. The last two trip purposes are nonrepetitive, at least on a daily basis. Experience has shown that people that do not use the system frequently are less likely than regular riders to accept survey forms because infrequent riders often assume that the survey would not apply to them.

## A.1.2 Survey Distribution Methods by Mode

After determining the span of hours in which surveys were to be distributed, the next step was to determine the methods for survey distribution on each mode. Passengers entering each heavy rail rapid transit station and each Green Line Central Subway station have to pass through fare gates at limited numbers of locations. At such stations, survey distributors were positioned either just inside or just outside the faregates, and instructed to offer survey forms to as many entering passengers as possible. At most stations, only one distributor was assigned to each fare collection area at any given time, but at stations where heavy passenger volumes were anticipated, two distributors were assigned at some times.

Passengers boarding Green Line trains at all surface stops on the B, C, D, and E Branches, except Riverside on the D Branch, either pay fares or display passes when boarding. In 1994, survey forms were distributed to passengers waiting on platforms on the D Branch, but were distributed by surveyors onboard trains on the other lines. However, because of crowding on peak-period trains, it was increasingly difficult to distribute surveys to passengers boarding at stops closer to the subway portals. Therefore, at all stops on all four branches, surveys in 2008-09 were distributed to passengers waiting on the platforms. Depending on the platform configuration and expected ridership volumes, either one distributor offered surveys to both inbound and outbound riders, or separate distributors were assigned to the inbound and outbound platforms.

The Mattapan High-Speed Trolley Line also has on-board fare collection, but the expected average trip loads were low enough that the survey distribution was done, at all times of the day, by one distributor riding on-board each inbound and outbound trip from one end of the route to the other, between approximately 6:00 AM and 3:30 PM. All of the survey distribution on the bus system was done by distributors on-board buses. The distribution plan called for coverage of every route in the system except for the Silver Line routes (which had been surveyed in 2005 and 2006), and routes that operated only outside of the survey hours. For efficiency, the set of trips to be covered in each distributor's assignment was to be based on trip sequences in bus operator assignments (runs). The amount of the project budget allocated for bus surveys allowed for only about half of all operator runs during the survey hours to be covered. However, by selecting runs that included above-average numbers of trips, the percentage of trips covered was greater than the percentage of runs covered. An attempt was made to survey approximately the same percentages of operator runs at each garage, but to maximize the statistical validity of the
results, the routes with lower ridership were surveyed at higher percentages (in some cases up to $100 \%$ of the scheduled trips) than routes with higher ridership. After completing the initial round of surveys, supplemental distribution was done on some routes that had low return totals in the initial round.

For each commuter rail line, the more efficient of two potential survey distribution strategies was used. One strategy called for surveys to be distributed at all times to passengers waiting at stations. The other strategy called for surveys to be distributed on-board all trains, either over the length of the route or on the inner half. (Very few commuter rail riders make trips entirely between stations on the outer halves of routes.) Depending on route length, number of stations, service frequency, train length, and expected ridership, on some routes on-board distribution was the most efficient strategy during AM peak hours, but on other routes, on-platform distribution was more efficient. Most survey distribution for outbound and off-peak trains on all lines was done on-board.

On the rapid transit, bus, and commuter rail systems, it was not feasible to have vehicle operators or in-station MBTA personnel distribute survey forms, so distribution was done by CTPS employees or temporary help hired specifically for the project. However, on the commuter boats and the Inner Harbor Ferry, it was expected that during the relatively long times between docks, surveys could be distributed by boat crew members, as they were in the 2000 surveys. This strategy worked satisfactorily on most trips, but it was necessary to have CTPS distributors re-survey some trips.

## A. 2 SURVEY RESPONSE

For purposes of discussion here, the survey response rate for each mode is defined as the number of usable surveys returned divided by the number of surveys distributed. The sampling rate is defined as the number of usable surveys returned divided by the estimated total number of riders boarding a given line or entering a given station during the survey span. The sampling rate was always lower than the response rate, because some riders who were offered survey forms did not take them, and because it was not feasible to contact every rider to offer a survey form. The response rate figures are understated to the extent that survey forms provided to distributors were left over at the end of assignments but not returned to inventory.

As in past surveys, response rates to the 2008/2009 surveys varied both between modes, and between services within each mode. The table below summarizes the number of surveys distributed, number of usable surveys returned, response rates, estimated total ridership, and sample rates for each of the modes surveyed.

TABLE A-1
2008-2009 Survey Distribution and Response by Mode

| Mode | Surveys <br> Distributed | Surveys <br> Returned | Response <br> Rate | Ridership | Sample <br> Rate |
| :--- | ---: | ---: | ---: | ---: | ---: |
| Rapid Transit | 122,000 | 22,767 | $18.7 \%$ | 296,200 | $7.7 \%$ |
| Bus | 72,000 | 12,313 | $17.1 \%$ | 209,700 | $5.9 \%$ |
| Commuter Rail | 42,000 | 12,440 | $29.6 \%$ | 55,550 | $22.4 \%$ |
| Greenbush CRR | 1,475 | 526 | $35.7 \%$ | 2,075 | $25.3 \%$ |
| Commuter Boat | 1,500 | 693 | $46.2 \%$ | 2,035 | $34.1 \%$ |
| Inner Harbor Ferry | 300 | 178 | $59.3 \%$ | 525 | $33.9 \%$ |
| Total | $\mathbf{2 3 9 , 2 7 5}$ | $\mathbf{4 8 , 9 1 7}$ | $\mathbf{2 0 . 4 \%}$ | $\mathbf{5 6 6 , 0 8 5}$ | $\mathbf{8 . 6 \%}$ |

Results for the Greenbush commuter rail line are shown separately from those of the rest of the commuter rail system, because the Greenbush surveys included some questions pertaining only to the line, and the results are in a separate database. It should be noted that from a statistical standpoint, the absolute number of surveys returned may be more important than the percent sample rate, depending on the size of the population being surveyed.

Each survey form included a web address that respondents could use to fill out forms on-line instead of returning the paper form, but only small percentages of riders on each mode used the on-line option. On-line responses are included in the response and sampling rate calculations in the table above.

Passengers who made trips involving more than one of the modes in the table above would be included in the ridership totals for each of the modes they used, but if they received survey forms for more than one of these modes, they probably only completed one of them. To the extent that this occurred, the sample rate shown for the system as a whole understates the percentage of distinct individuals who were surveyed.

## A. 3 PROCESSING THE SURVEY FORMS

Before being entered in the databases, each survey form was checked for completeness. Forms which did not include responses to enough of the questions to be useful were either included only in the written comments databases, if applicable, or discarded completely. Likewise, forms on which most of the responses were evidently facetious were discarded. Forms that were mostly complete but were missing entries such as boarding station or stop that could be deduced from answers to other questions were corrected as needed.

The survey instructions called for passengers to describe one-way trips that they were making, but some described round trips and reported the same boarding and alighting station. If the correct alighting station could be determined from answers to other questions, it was used in place of the roundtrip alighting station. For example, many of the surveys that reported the same boarding and alighting station nevertheless gave different addresses for origin and destination. If the alighting station could not be determined, it was changed to "unspecified." If the reported origin and destination addresses were the
same, the destination was changed to "unspecified." Other editing changes included correcting transposition of lines in multi-line entries, such as town name on line for street address and vice-versa.

After the records were entered in the databases, additional checks were made for errors missed in the earlier editing process, and for data-entry errors. Missing boarding or station entry times were filled in based on the times reported on surveys from the same route or stations with serial numbers similar to the ones on the forms with the missing numbers. On surveys with origin or destination addresses in Boston, Cambridge, Somerville, or Brookline, standard neighborhood designations used by CTPS were added to the city or town based on the rest of the reported address or other information on the survey.

## A. 4 EXPANSION METHODS

To prevent differences in sampling rates among stations or routes from skewing the overall results, it was necessary to apply a weight factor to each survey record. These factors were calculated using the best available ridership data for each mode and line or station. The project budget did not allow for special control counts of ridership to be conducted. However, since the surveys were, to the extent possible, distributed on "representative" weekdays, any ridership count that is also supposed to be for a "representative" weekday should be acceptable for purposes of survey expansion.

As in the case of past surveys, separate weight factors were used for different times of day if enough surveys were returned from different time periods. In the 2008/2009 surveys, the maximum breakdown of time periods used for most modes was 6:00 to 8:29 AM and 8:30 AM or later. Separate weight factors were calculated for inbound and outbound travel unless there were too few responses from one of the directions to use separately.

For the rapid transit system, station entry totals by time period were calculated from the averages of Automated Fare Collection (AFC) data from several days in the Spring of 2009. At most stations, inbound and outbound riders use the same faregates. The AFC totals were split by direction on the basis of past CTPS counts. Similarly, at stations such as Downtown Crossing where faregates are shared by riders going to more than one route, past CTPS counts were used to split AFC totals by route as well as by direction.
Boarding totals for surface Green Line stops were estimated from the most recent CTPS counts at each stop, with adjustments for elimination of outbound free fares in 2007. (Boarding counts at about half of the stops had been done in the fall of 2006.) Boarding totals for stations on the Mattapan High Speed Line were based on counts conducted by CTPS in 2005.

For each bus route, ridership totals by direction and time period were based on the trip summaries from the most recent CTPS ridecheck. In several cases, two or more bus routes overlap for substantial portions of their routes, and riders who could make their trips interchangeably on any of them often listed all or
none of them as the route they were riding when surveyed. For such routes, composite weight factors were usually calculated for the combined routes and applied to all of them.

For the commuter rail system, peak loads by train were taken from the latest figures used by the MBTA's contract operator, Massachusetts Bay Commuter Railroad (MBCR) for purposes of equipment assignment. For inbound trains, boardings by station were estimated by applying factors from MBCR Train Audit reports to the peak load totals. These figures were then grouped to provide one weight factor for peak trains and one for off-peak trains for each station. During the survey hours, commuter rail ridership was much lower outbound than inbound, and no breakdowns of boardings by station were available. Therefore, weight factors were based on peak loads and survey responses, with separate factors at most for peak and off-peak trains but not for different boarding stations.

For the commuter boat and Inner Harbor Ferry services, ridership figures for each boat trip on each day in the week when surveys were distributed were obtained from the MBTA's contract operators of the boats. Ridership totals for the trip with each scheduled departure time on the three mid-week days (July 29,30 , and 31,2008 ) were averaged and divided by the number of returned surveys from passengers who were surveyed on a boat departing at that time. In most cases, the ratio calculated for each trip in this manner was used as the weight factor for the records from surveys for that trip. However, when large differences in sampling in a sequence of trips would have resulted in large variations in the weights given to their records, composite factors based on the total ridership and returns for these trips were used instead.

## A. 5 POTENTIAL PROBLEMS WITH EXIT STATION TABLES

Because the surveys were expanded only to boarding counts, the summaries of data for exit stations for the rapid transit and commuter rail lines and exit docks for the boat lines, may not be well calibrated to the actual number of exits at each location. To the extent that there was bias in the response rates with respect to the exit station or dock, the total passengers shown exiting at that station or dock will vary from the number one would get through a passenger count. For example, suppose that during a certain time interval, 100 passengers enter Station A, and that of these, 50 are going to Station B and 50 are going to Station C. Further suppose that for whatever reason (amount of time on the train, general propensity to fill out surveys, ease of turning in completed surveys at stations), $20 \%$ of the riders going to Station C, but only $10 \%$ of those going to Station B return surveys. Ten surveys will be received from riders going to Station C, and 5 surveys from riders going to Station B, or a total of 15 . Using a weight factor based only on the entry totals at Station A, each survey will be given a weight of $100 / 15=6.67$. The summary tables will therefore show 33 passengers going from Station A to Station B and 67 from Station A to Station C instead of 50 to each.

Calculation of weight factors adjusted both for entry totals at boarding stations and exit totals at alighting stations would require a complex iterative procedure using data that cannot be readily obtained at present. Even then, because of the many different boarding and alighting station combinations and large differences in the actual numbers of riders traveling between each pair, survey samples much larger than those obtained either in 2008/2009 or in past MBTA surveys would be needed in order to obtain highly reliable data on station-tostation travel. When station-to-station totals from the 2008/2009 survey are further divided into origin-destination pairs by city, town, or neighborhood or to even finer levels of detail, very few have sufficient numbers of responses needed for high confidence levels and narrow confidence intervals.

## APPENDIX B

## Transfer Station Results for All Stations Regardless of Line

The tables presented in previous chapters for State and Government Center have included responses only from passengers boarding or exiting the Blue Line at those stations. For some purposes, distinctions between Blue Line and Orange Line riders at State are not important; the same is true for Blue and Green Line riders at Government Center. This appendix presents six tables for each station that include all of the riders boarding or exiting at the station:

- Origin Locations and Activities
- Access to the Rapid Transit System
- Transfers to the Rapid Transit System
- Egress from the Rapid Transit System
- Transfers from the Rapid Transit System
- Destination Locations and Activities

The State tables shown here are the same as the tables shown in Appendix B of the Orange Line volume, the Government Center tables are the same as the tables shown in Appendix B of the Green Line volume. They are included in both volumes for the reader's convenience.

## APPENDIX C

## Survey Form

## BUSINESS REPLY MAIL

 CENTRAL TRANSPORTATION PLANNING STAFF POSTAGE WILL BE PAID BY ADDRESSEEThis survey is being conducted to help determine how rail rapid transit (Red, Blue, Orange, and Green Line) service can be improved. Please help us by answering as many questions as you can. After completing this survey, please either hand it to a survey distributor or a Customer Service Agent at a station, or drop it in the mail (no stamp is needed). You may fill out the survey online or get more information about the survey at www.ctps.org/mbtarapid. All answers are confidential. You will not be put on any mailing lists.

THANK YOU!

1. What rail line were you boarding/riding when you got this survey form?

Orange Lin
Blue Line
Mattapan Trolley
$\square$ Green Line B (Boston College) on surface
$\square$ Green Line C (Cleveland Circle) on surface
$\square$ Green Line D (Riverside) on surface
$\square$ Green Line E (Heath St.) on surface
$\square$ Green Line in subway, or at Lechmere or Science Park
2. At what station did you board the train on that line?
3. About what time did you board that train?

$$
\square \mathrm{AM} \quad \square \mathrm{PM}
$$

4a. Where were you before starting this entire one-way trip?
$\square$ At work
$\square$ At a doctor or other personal business
At school
$\square$ At a work-related errand or meeting
$\square$ At home

$\square A$At a restaurant, or social or recreational activity $\square$ At a store - Other
$\qquad$
4b. Where is the place in question 4a located?
(address or nearest street intersection or landmark)
(city/town/neighborhood) (state) (zip code)

5a. Where did you first board a public transit vehicle on this one-way trip? $\square$ At the station reported in question 2
$\square$ At the $\qquad$ rapid transit or commuter rail station
$\square$ At a bus or Silver Line stop at
on Route (number or name)

- At $\qquad$ boat dock $\qquad$
5b. How did you get to the station or stop reported in question $5 \mathbf{5}$ ?
Walked directly (from work, school, home, etc.)
$\square$ Drove or rode in a personal vehicle and parked at or near station/stop $\square$ Dropped off by personal vehicle that did not park $\square$ Taxi $\square$ THE RIDE $\square$ Private shuttle van/shuttle bus $\square$ Bicycle $\square$ Other $\qquad$

6. How long did it take to get from where this trip started to the first place where you boarded a public transit vehicle on this trip? $\qquad$ minutes
7. What type of fare did you pay for this rapid transit trip?
$\square$ Pay-per-ride CharlieCard (plastic) Pay-per-ride CharlieTicket (paper) Monthly pass (circle one): Link (Subway + Bus); Zone $\qquad$ ; Boat;
Inner Express Bus; Outer Express Bus; Student; Senior; Disability
Full cash fare on-board Green Line train or Mattapan trolley
$\square$ Reduced fare (circle one): Student; Senior; Disability
Child under age 12 free fare
$\square$ Blind Access Card
1-day Link Pass
$\square$ 7-day Link Pass
$\square$ Othe

8a. At what station will you/did you leave the train you were boarding/ riding when you got the survey? $\qquad$
8b. Where will you/did you last leave a public transit vehicle on this
one-way trip? At the station reported in question 8a
At the $\qquad$ rapid transit or commuter rail station
$\square$ At a bus or Silver Line stop at $\qquad$ on Route (number or name)
$\square \mathrm{At}$ $\qquad$ boat dock Other

9a. Where will/did this one-way trip end?
$\square$ At work
$\square$ At a doctor or other personal business
$\square$ At school $\square$ At a work-related errand or meeting
$\square$ At home $\square$ At a restaurant, or social or recreational activity
$\square$ At a store $\square$ Other
ion 9a located?
9b. Where is the place in question 9a located?
(address or nearest street intersection or landmark)
$\overline{\text { (city/town/neighborhood) }} \overline{\text { (state) }}$ (zip code)

9c. How will you/did you get there from the station/stop in question 8 b ?
Walk directly (to work, school, home, etc.)
Drive or ride in personal vehicle parked at or near station/stop
$\square$ Met at station/stop by car or other personal vehicle $\square$ Taxi $\square$ THE RIDE
$\square$ Private shuttle van/shuttle bus $\square$ Bicycle $\square$ Other $\qquad$
10. How long will it/did it take to get to your destination (in question 9a/9b) from your last station/stop (in question 8b)? $\qquad$ minutes
11. How many days a week do you ride the rail line checked in question 1 ? Less than 1 day
$\square 3$ days
6 days
$\square 1$ day $\square 4$ days
$\square$ days
$\square 2$ days $\square 5$ days
I'm only visiting Boston
12. Do you ride that rail line on ...

Saturdays? Yes, regularly
Sundays? Yes, regularly
Yes, occasionally
$\square$ No, not at all No, not at all
13a. On days when you ride that rail line, how many one-way trips do you usually make on it? $\qquad$
13b. On days when you do not ride that rail line, do you make the same trips by other means? $\square$ Yes $\square$ No If yes, check all that apply: $\square$ Drive alone $\square$ Carpool/vanpool $\square$ Other MBTA service $\square$ Non-MBTA bus Bicycle $\square$ Other $\qquad$
14. Do you have a valid driver's license? $\square$ Yes $\square$ No

15a. How many usable vehicles (autos, trucks, or motorcycles) does your household have? $\square 0 \quad \square 1 \quad \square 2 \quad \square 3$ or more
15b. Could you have used one of these vehicles instead of riding the rail line on the day you got this survey? $\square$ Yes $\square$ No
16. What is your age?
18 or under
$\square$ 25-34
$\square$ 35-44
$\square 45-64$
65 or over
17. What is your primary occupation?
$\square$ Construction Trades/ManufacturingProfessional/Business Services $\square$ Retail/Sales $\square$ Student $\square$ Homemaker $\square$ Retired/Unemployed $\square$ Other $\qquad$
18. How many people are in your household, including yourself? (the number of people living in your house or apartment)
19. What is your annual combined household income?
Under \$20,000
\$40,000-\$49,999
\$75,000-\$99,999

- \$20,000-\$29,999
- \$50,000-\$59,999
\$100,000 or more - \$30,000-\$39,999 - \$60,000-\$74,999

20. What is your gender? (For example: Male, Female) $\qquad$
21a. How do you self-identify by race? (check all that apply)
$\square$ American Indian or Alaska Native $\square$ Asian
$\square$ Black or African American White
$\square$ Native Hawaiian or other Pacific Islander $\square$ Other $\qquad$
21b. Are you Hispanic/Latino? $\square$ Yes $\square$ No
21. What are your main reasons for using MBTA rapid transit service? (check all that apply)
Convenience
Speed/travel time
Avoid driving/traffic
Avoid parking at destination
$\square$ Environmentally responsible $\square$ Less expensive than other choices Can read or do work on the train $\square$ Only transportation available - Other
you obtain information about MBTA service? (check all that apply)

| $\square$ By phone | From MBTA website | From SmarTraveler |
| :---: | :---: | :---: |
| $\square$ Get printed material at:_station store _library $\square$ Other |  | tion booth __on vehicle |
|  |  |  |

23b. Do you carry a cell phone when riding the MBTA? $\square$ Yes $\square$ No
24. Several measures of service quality are listed below. Please circle a number after each measure to indicate how you feel about MBTA rapid transit service. (Leave blank any measures that don't apply.) Then place a check mark beside the three measures most important to you.

|  | Poor | Average |  |  | Excellent $\boldsymbol{V}$ |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :--- |
| Reliability (on-time performance) | 1 | 2 | 3 | 4 | 5 | - |
| Safety and security | 1 | 2 | 3 | 4 | 5 | - |
| Cleanliness/condition of vehicles | 1 | 2 | 3 | 4 | 5 | - |
| Courtesy of train crews | 1 | 2 | 3 | 4 | 5 | - |

| Station amenities | 1 | 2 | 3 | 4 | 5 | - |
| Fare collection system | 1 | 2 | 3 | 4 | 5 | - |

Comments/Suggestions:

[^0]:    ${ }^{1}$ Reports on bus rapid transit (the Silver Line) are included in the set, although their data are from surveys conducted by CTPS in 2005 and 2006.

[^1]:    ${ }^{1}$ Surveys were not distributed on Monday mornings or Friday afternoons, as the travel at these times is typically lighter than at other times during the week.

[^2]:    ${ }^{1}$ To exit the system means to exit the entire rail rapid transit system and does not include alighting from a Blue Line train and transferring to another train.
    ${ }^{2}$ For the purposes of this report, the Central Subway includes all Green Line stations from Lechmere through Kenmore and Symphony, inclusive.
    ${ }^{3}$ Entering the rapid transit system means entering from outside the system, not transferring to a Blue Line train from another train.

[^3]:    ${ }^{4}$ The income ranges were selected to be consistent with the ranges used by the U.S. Census Bureau and in earlier MBTA systemwide passenger surveys.

[^4]:    * Totals and percentages reflect only riders who responded to both Saturday and Sunday questions.

[^5]:    ${ }^{1}$ For the purposes of this report, the Central Subway includes all Green Line stations from Lechmere through Kenmore and Symphony, inclusive.

[^6]:    ${ }^{1}$ For the purposes of this report, the Central Subway includes all Green Line stations from Lechmere through Kenmore and Symphony, inclusive.

[^7]:    Mean Household Size:
    2.69

[^8]:    Mean Household Size:
    2.38

[^9]:    Mean Household Size:
    2.35

[^10]:    * Totals and percentages reflect only riders who responded to both Saturday and Sunday questions.

[^11]:    * Totals and percentages reflect only riders who responded to both Saturday and Sunday questions.

[^12]:    * Totals and percentages reflect only riders who responded to both Saturday and Sunday questions.
