Stephanie Pollack, MassDOT Secretary and CEO and MPO Chair

Karl H. Quackenbush, Executive Director, MPO Staff

TECHNICAL MEMORANDUM

DATE: December 6, 2018

TO: Peter Lombardi, Town of Wenham

FROM: Benjamin Erban and Chen-Yuan Wang, MPO Staff

RE: Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

This memorandum summarizes the analyses and improvement strategies for the downtown corridor of Wenham, where Route 1A (Main Street) intersects with Cherry Street, Monument Street, and Arbor Street. The document contains the following sections:

1. Study Background
2. Existing Facilities and Land Uses
3. Issues and Concerns
4. Existing Traffic Conditions
5. Crash Data Analysis
6. Existing Operations Analysis
7. Short-Term Improvement Alternatives
8. Long-Term Improvement Alternatives
9. Conclusions and Next Steps

It also includes technical appendices that contain data and methods applied in the study.

1 STUDY BACKGROUND

The purpose of the Safety and Operations Analyses at Selected Intersections study is to examine safety, operations, and mobility issues at major intersections in the Boston Region Metropolitan Planning Organization (MPO) region's arterial highways—areas where many crashes occur, that experience congestion during peak traffic periods, or are in need of improvements to accommodate heavy vehicles (buses and trucks) or nonmotorized transportation (bicyclists and pedestrians). For the past 10 years, the MPO has conducted these planning studies, which have been well received by the municipalities in the region. These studies give communities an opportunity to look at the needs of the selected locations, starting at the conceptual level, before they commit funds for design and engineering. Eventually, if the project qualifies for federal funds, the study's documentation also is useful to the Massachusetts Department of Transportation (MassDOT). These studies support the MPO's visions and goals, which include

increasing transportation safety, maintaining the transportation system, advancing mobility, and reducing congestion.

Following a selection process based on safety conditions, congested conditions, multimodal significance, regional significance, regional equity, and implementation potential, the following two locations from a short list of 10 intersections were approved for study by the MPO.^{1,2,3,4,5,6,7}

1. Route 126 (Hartford Avenue) at Maple Street in Bellingham
2. Route 1A (Main Street) at Arbor Street, Monument Avenue, and Cherry Street in Wenham

This memo focuses on the site in Wenham. The location was selected to address several issues, including traffic congestion, traffic safety, and bicycle/pedestrian safety and access. The Wenham site also met the criterion of regional equity for this study and had strong support from community representatives and MassDOT District 4.

1.1 Public Participation

MPO staff discussed the safety and operations issues at the intersection and the scope of work for the study with the Town of Wenham, which expressed interest and willingness to participate in the study. An advisory task force—composed of representatives from the Town of Wenham and MassDOT—was established to guide this study. MPO staff met with the task force twice. The first meeting focused on the work scope and existing problems. In the second meeting, MPO

¹ Safety Conditions: Location has a higher-than-average crash rate for its functional class, contains a Highway Safety Improvement Program (HSIP)-eligible crash cluster, contains a top-200 high crash location, or has a significant number of pedestrian and bicycle crashes (two or more per mile).

² Congested Conditions: Travel time index is at least 1.3.

³ Multimodal Significance: Location carries bus route(s), is adjacent to a transit stop or station; supports bicycle or pedestrian activities or has an implementation project to support one or more of these activities; has need to accommodate pedestrians and bicyclists and improve transit; or high truck traffic serving regional commerce.

⁴ Regional Significance: Location is in National Highway System; carries a significant portion of regional traffic (ADT >20,000); lies within 0.5 miles of Environmental Justice transportation analysis areas or zones; or is essential for the region's economic, cultural, or recreational development.

⁵ Regional Equity: That is, it was important not to select 1) more than one location in a subregion and 2) a location in same subregion as in the preceding cycle of this study.

⁶ Implementation Potential: Location is proposed or endorsed by its roadway administrative agency (agencies); proposed or endorsed by its subregion and is a priority for that subregion; or has strong support from other stakeholders.

⁷ Safety and Operations Analyses at Selected Intersections: Federal Fiscal Year 2018, Technical Memorandum to the Boston Region Metropolitan Planning Organization. Seth Asante and Chen-Yuan Wang, January 18, 2018.

staff presented the existing conditions, analyses, proposed improvements, and received advice from the task force members. This report reflects the task force's feedback. Appendix A includes a list of task force members, information about the selection process, and comments about the study.

2 EXISTING FACILITIES AND LAND USES

2.1 Roadway and Geometry

The study area (shown in Figure 1) is located in the center of the Town of Wenham and covers a quarter-mile segment of Route 1A. Route 1A intersects three streets within this distance: Cherry Street and Monument Street, which approach from the west and end at T intersections, and Arbor Street, which approaches from the north and forms a four-way intersection with the much smaller Friend Court. All three of these intersections are unsignalized.

Route 1A is classified as an urban principal arterial, Friend Court is classified as a local street, and Cherry Street, Monument Street, and Arbor Street are all minor arterials. MassDOT has jurisdiction over Route 1A and the Town has jurisdiction over all other roadways. All road segments are single-lane except at the end of Arbor Street, where there is a marked turn bay for southbound traffic. The right-of-way varies from 50 feet to 55 feet within the study area. Sidewalks are present on all streets besides Friend Court but are on only one side of the road in many places. Ten-foot shoulders are present along much of Route 1A. Although not allowed, vehicles sometimes park in the shoulders, especially near the church and post office.

2.2 Land Uses

The study corridor is part of the Wenham historic downtown and is adjacent to the Wenham Town Hall, Wenham Museum, and the First Church in Wenham. It is also home to several town services including the fire department, police station, and post office. There are some small businesses on Route 1A just north of the corridor as well as a teahouse off Monument Street. The property by the teahouse also hosts a day camp during summer months. Near the south end of the corridor across from Cherry Street is Maples, a retirement community.

There are several recreational attractions within one mile of the corridor, including the Wenham Country Club, Wenham Lake, Patton Park, and the Ipswich River Wildlife Sanctuary. The site is two miles (four minutes) from Route 128 and four miles (nine minutes) from Interstate 95 and Route 1. There is no local bus service, but the Newburyport/Rockport Line of the commuter rail has a stop two-thirds of a mile to the north (Hamilton/Wenham) and another stop one and one-half miles to the south (North Beverly).

Safety and Operations
Analysis at
Selected Intersections

3 ISSUES AND CONCERNS

The Safety and Operations Analyses program examines safety, operational, and mobility concerns at major intersections within the Boston MPO. Each of these issues plays a role at the study location in Wenham.

Traffic Safety

The existing intersection geometry in the study area leads to several safety issues:

- High-volume unsignalized intersections like the three present at this location are prone to collisions stemming from failure to yield, confusion about right-of-way, and unexpected yielding.
- Tightly spaced intersections can cause weaving traffic and queue spillovers, making them difficult to navigate safely during high-traffic periods.
- Wide and poorly marked travel lanes encourage high speeds and use of the shoulder as a second travel lane. This behavior is especially dangerous to vehicles making turns from the opposite approach.
- Poor line of sight on the Cherry Street and Monument Street approaches make it difficult to enter Route 1A safely from those streets.
- Several driveways have outlets at or near the intersections in the study area. Clarifying or restricting traffic movement at these locations would reduce confusion and improve safety.

Many of these issues can be addressed by upgrading the existing infrastructure, which would improve safety for local users and through traffic alike.

Traffic Operations

Congestion is frequently observed during peak periods in the study area. At this location, the north-south Route 1A corridor intersects two other important traffic flows: Cherry Street, which carries traffic east-west to Danvers and Interstate 95, and Arbor Street, which extends north to Topsfield and several state parks.

Monument Street branches from Cherry Street one-half mile from the study area and the east-west traffic flow is split between the Monument Street and Cherry Street intersections.

All three of the intersections in the study area are unsignalized, and consequently the side street approaches experience queueing and delay. Signalization at one or several of the intersections would have the potential to improve access from the side streets. Using multiple coordinated signals could further improve operations for all users by better managing the conflicting traffic flows through the tightly spaced intersections.

Pedestrian and Bicycle Mobility

This segment of Route 1A is nominally the center of Wenham and is adjacent to several attractors of foot traffic including the town hall, the Wenham Museum, a church, a retirement community, a post office, and several businesses. However, inadequate pedestrian amenities means pedestrian access to these sites is more difficult than it should be. The Town of Wenham is interested in improving the sidewalks and crossings at the study location to better fulfil its role as a historic downtown area.

The Route 1A corridor is also a popular recreational cyclist route, with groups meeting on weekends in the fire station driveway before setting out for rides. There are currently no bicycle amenities in the study area apart from a variable-width paved shoulder, and addressing these needs should be part of any design proposal.

Emergency Vehicle Access

The corridor is also adjacent to the Wenham Police Department and Wenham Fire Department, the latter of which has its driveway opening directly onto the intersection at Arbor Street. The Town of Wenham has expressed interest in improving the ability of emergency vehicles to travel safely and quickly through the study corridor.

4 EXISTING TRAFFIC CONDITIONS

4.1 Daily Traffic Volumes

MassDOT Highway Division's Traffic Data Collection section conducted automatic traffic recorder (ATR) counts over a three-day period from Monday November 27, 2017, to Thursday November 30, 2017. The counts collect traffic volumes, speeds, and classifications continuously over the collection period, and are used to determine the average weekday traffic (AWDT) of a roadway. Speed, volume, and classification counts were performed at five locations within the study area, and an additional four stations were set up to collect traffic volumes only.

The counts found the average daily traffic to be 15,000 to 20,000 vehicles per day on Route 1A (Main Street), 4,500 vehicles per day on Cherry Street, 3,800 vehicles per day on Monument Street, and 6,500 vehicles per day on Arbor Street. Heavy vehicle traffic was 1.9 percent of total traffic on Route 1A and 1.8 percent of total traffic on the side streets. More information on the volume and classification data can be found in Appendix B.

Travel speeds were also recorded and compared with speed regulations. The observed 85th-percentile speeds and posted speed limits within the study area are shown in Figure 2. The counts showed 85th-percentile speeds ranged from 35 miles per hour (mph) to 38 mph within the study area. Those speeds exceed the speed limits of 25 mph on Cherry Street and 30 mph elsewhere. The details of the speed calculations are also included in Appendix B.

4.2 Turning Movement Volumes

MassDOT Highway Division's Traffic Data Collection Section also collected turning-movement counts (TMC) in the study area on Wednesday November 29, 2017. The counts were conducted during the weekday AM peak travel period (7:00 AM–9:00 AM) and weekday PM peak travel period (4:00 PM–6:00 PM). The counts were conducted at each of the three intersections in the study area. Heavy vehicles such as school buses, transit buses, and trucks were counted separately. Pedestrian and bicycle counts were conducted simultaneously with the TMCs.

Figure 3 shows the peak hour turning movement, pedestrian, and bicycle volumes in the study area. The peak hours were 7:30 AM–8:30 AM for the morning peak and 4:00 PM–5:00 PM for the evening peak. There were only 17 total pedestrian crossing events observed during the four-hour observation interval, although pedestrian traffic would be expected to be higher during warmer months.

5 CRASH DATA ANALYSIS

5.1 Collision Trends

Ninety-two crashes were recorded by the Wenham Police Department over the seven-year period between 2011 and 2017. Table 1 separates these crashes by location and further breaks them down according to type of collision, severity, and factors that may have influenced the crash.

Table 1
2011–17 Crash Summary and Crash Rates

Intersection, Crash Variable	Arbor Street	Monument Street	Cherry Street	Entire Corridor
Crash Severity	—	—	—	—
Non-fatal injury	6	6	5	17
Property damage only	21	23	28	72

Time Period^a	—	—	—	—
Peak period	15	17	19	51
Off-peak period	12	13	16	41
Total Crashes	27	30	35	92
Seven-year average (rounded)	4	4	5	13
Crash rate (calculated)	0.44 ^b	0.58	0.72	9.45 ^c
Crash rate (MassDOT District 4)	0.57	0.57	0.57	3.49

^a AM peak period = 7:00 AM–10:00 AM, PM peak period = 3:00 PM–6:00 PM

^b Crash rates for individual intersections use intersection crash rate, with units crashes per year per million entering vehicles

^c Crash rate for entire corridor uses corridor crash rate calculation, with units crashes per mile per year per million entering vehicles

Table 1 also compares the crash rates for both the individual intersections and the entire study corridor against average values. The crash rates for the three intersections give the number of crashes per year per million vehicles entering the intersection, and are compared against the 2016 District 4 average value for unsignalized intersections. The crash rate for the entire corridor gives the number of crashes per mile per year per million vehicles passing through the corridor, and is compared against the statewide average for all roadways with the same functional classification as Route 1A (Principal Arterial—Other). Worksheets detailing the crash-rate calculations can be found in Appendix C.

5.2 Collision Diagram

MPO staff also prepared a collision diagram for the study intersection to examine crash patterns. Police reports from the Wenham Police Department were obtained for the years 2011–17. Figure 4 shows the collision diagram. A second diagram containing index numbers that can be used to cross reference individual crash records is given in Appendix C.

5.3 Safety Analysis

The collision statistics and diagram show that turns are a safety issue at the unsignalized intersections within the corridor. Thirty-nine of the 92 collisions (42%) were angle crashes, and the collision diagram shows that most of these occurred when a vehicle turning left failed to yield to oncoming traffic. The single most dangerous maneuver was the left turn out of Monument Street, where 15 collisions occurred over the seven-year period. The turning distance from the marked stop line is nearly 100 feet, meaning drivers need a very long gap to execute the turn safely. During congested hours those gaps are scarce and impatient drivers may try to edge into traffic or cut across an oncoming vehicle.

The crash rate analysis showed that the Cherry Street intersection exceeded the District 4 average crash rate, while the Monument Street intersection was about equal to the district average crash rate. However, analyzing the study area as a corridor yields a corridor crash rate almost three times the statewide average for similar roadways (9.45 crashes per mile per year per million entering vehicles, compared to 3.49 crashes per mile per year per million entering vehicles). This result demonstrates that while these intersections might not represent a significant safety risk if they were on an isolated portion of Route 1A, when clustered within one-quarter mile of each other the frequency of collisions becomes a concern.

Symbols	Types of Crash	Severity
→ Moving vehicle	→ Parked vehicle	
→ Backing vehicle	→□ Fixed object	
→ Noninvolved vehicle	→○ Bicycle	x : Number of injury crashes
→ Pedestrian	→▲ Animal	y : Total number of crashes
	→ Head on	
	→ Angle	
	→ Rear end	
	→ Sideswipe	
	→ Out of control	

6 EXISTING OPERATIONS ANALYSIS

6.1 Intersection Level of Service

Using the data and information collected, MPO staff built a traffic analysis network (with Synchro)⁸ for the AM and PM peak periods to assess the capacity and quality of traffic flow at the intersections. Staff conducted the analyses consistent with Highway Capacity Manual (HCM) methodologies.⁹ The HCM methodology demonstrates the driving conditions at signalized and unsignalized intersections in terms of levels of service (LOS) ratings A through F. LOS A represents the best operating conditions (little to no delay), while LOS F represents the worst operating conditions (very long delay). LOS E represents operating conditions at capacity (limit of acceptable delay). Table 2 shows the control delays associated with each LOS for signalized and unsignalized intersections.

Table 2
Existing Conditions Levels of Service and Control Delays at Intersections

Level of Service	Signalized Intersections Control Delay (seconds per vehicle)	Unsignalized Intersections Control Delay (seconds per vehicle)
A	≤ 10	≤ 10
B	> 10–20	> 10–15
C	> 20–35	> 15–25
D	> 35–55	> 25–35
E	> 55–80	> 35–50
F	> 80	> 50

Table 3 presents peak-hour performance in terms of LOS, delay (average delay, seconds per vehicle), and queues (95th percentile queue length, feet) for existing conditions. The results show that vehicles face delays of more than three minutes on all side street approaches, which is well above the acceptable limit. More detail on the analyses can be found in Appendix D.

L = Left turning traffic. LOS = Level of Service. LT = Left and through traffic. LTR = Left, through, and right traffic. R = Right turning traffic. TR = Through and right traffic.

6.2 Signal Warrants

MPO staff also performed Signal Warrant Analysis using the methodology from the *Manual on Uniform Traffic Control Devices*.¹⁰ Staff reviewed Warrant 1 (eight-hour vehicular volume), Warrant 2 (four-hour vehicular volume), Warrant 3 (peak-hour vehicular volume), Warrant 4 (pedestrian volume), and Warrant 7 (crash history). All three intersections were found to warrant a traffic signal based on each of the volume criteria (Warrants 1-3), and the intersection at Cherry Street additionally was found to satisfy the criteria based on collision history. Table 4 shows a summary of the analysis, and full details are provided in Appendix E.

¹⁰ Chapter 4C Traffic Control Signal Needs Studies, *Manual on Uniform Traffic Control Devices*, 2009 Edition with Revisions 1 and 2, Federal Highway Administration, US Department of Transportation, May 2012.

Table 4
Summary of Signal Warrant Analysis

Intersection	Warrant 1 8-hour volume	Warrant 2 4-hour volume	Warrant 3 Peak-hour volume	Warrant 4 Pedestrian Volume	Warrant 7 Crash Experience
Route 1A at Arbor Street	Yes	Yes	Yes	No	No
Route 1A at Monument Street	Yes	Yes	Yes	No	No
Route 1A at Cherry Street	Yes	Yes	Yes	No	Yes

7 SHORT-TERM IMPROVEMENT ALTERNATIVES

MPO staff identified several short-term improvements that would address some of the issues identified in the study area. These proposals, which are shown in more detail in Figure 5, include the following:

- Restripe Route 1A between Cherry Street and Arbor Street to add a left-turn lane/median and to include shoulders for bicycle accommodation
- Increase pedestrian signal crossing time at the post office crosswalk
- Double up pedestrian crossing warning signs
- Add yield line (shark teeth) approaching Route 1A crosswalks
- Add a speed regulation sign (25 mph) on Cherry Street Eastbound east of Monument Street
- Clearly define on-street parking spaces

The short-term options make use of the existing pavement width to minimize construction time and cost. They could be implemented either as a stopgap measure while long-term alternatives are being funded and constructed, or as an alternative to the long-term proposals if the town chooses not to pursue any long-term options.

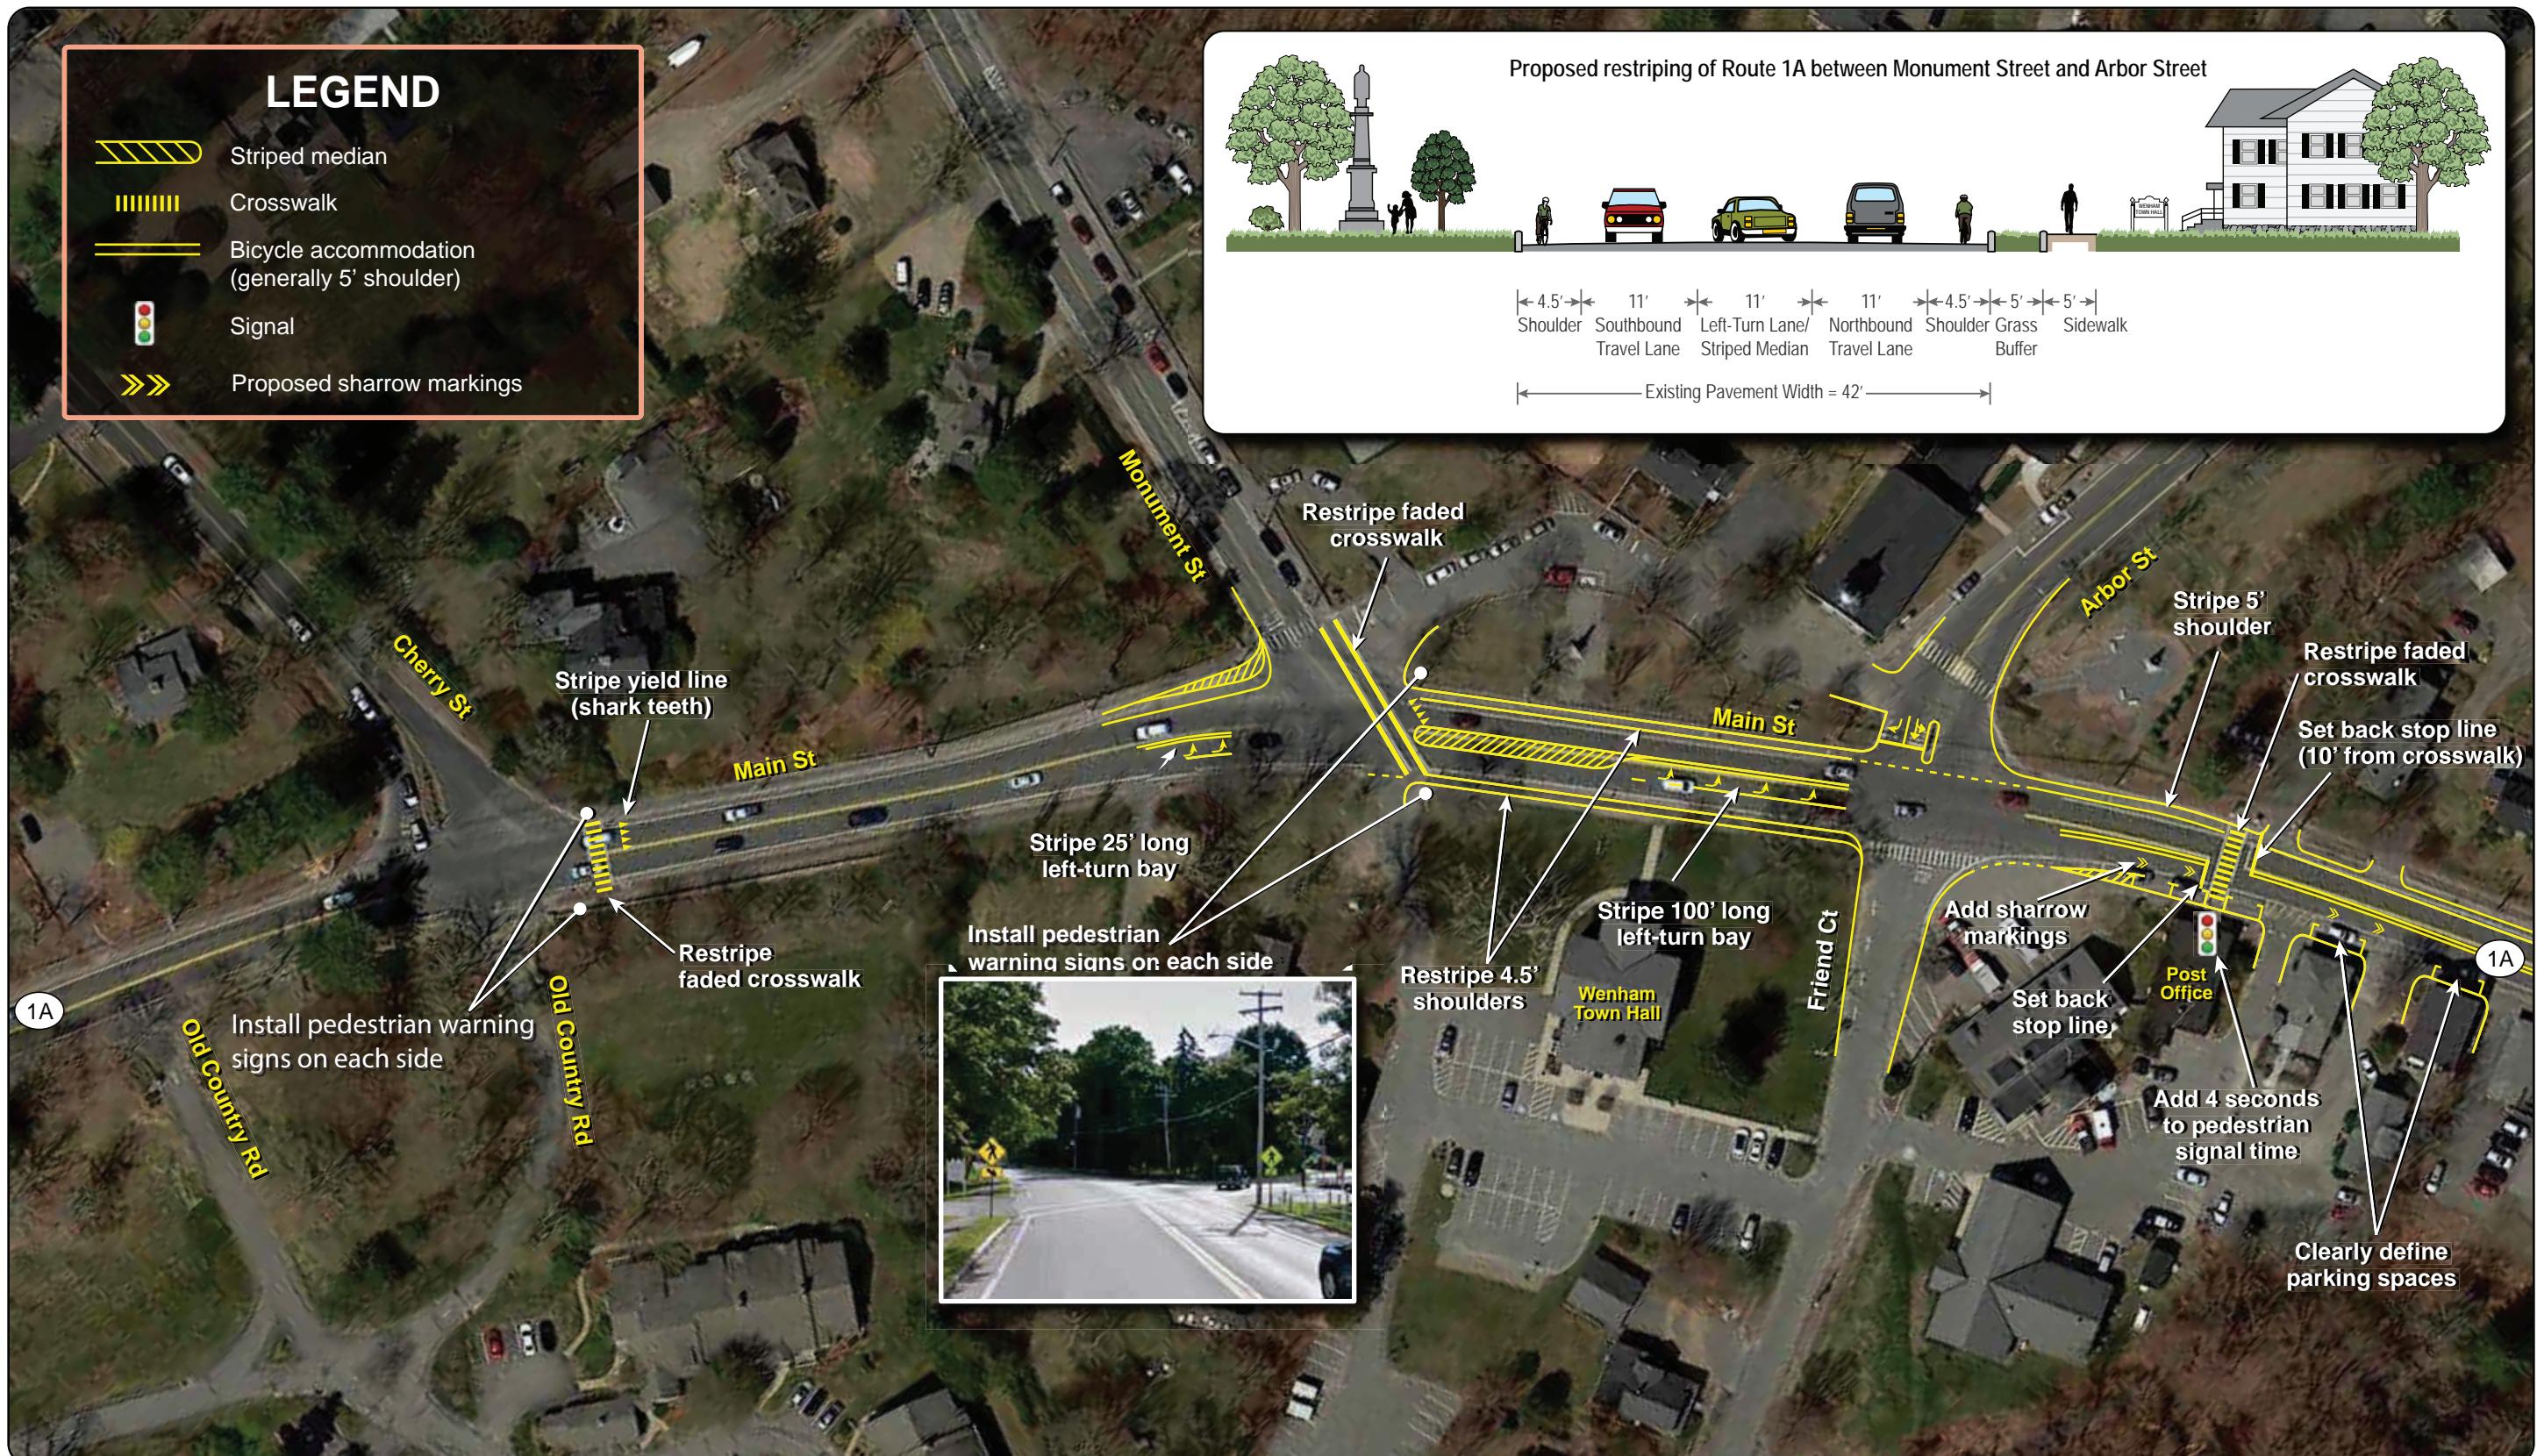

Figure 5
Proposed Short-Term Improvements
Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

8 LONG-TERM IMPROVEMENT ALTERNATIVES

The existing conditions analysis described in the previous chapters strongly suggests that one or multiple traffic signals could improve the safety and operations within the study area. Consequently, MPO staff experimented with five improvement alternatives involving signalization and roadway reconstruction, along with a sixth that employs a roundabout control scheme. While these options would cost more and take longer to construct than the short-term alternatives discussed in the previous chapter, they also offer a greater potential to improve conditions along the corridor.

8.1 Proposed Cross-Section of All Alternatives

MPO staff recommends resurfacing the roadway across the length of the corridor with a new cross section that would address some of the safety and mobility issues. Figure 6 shows the proposed cross sections for different portions of Route 1A within the study area. These modifications address the following issues:

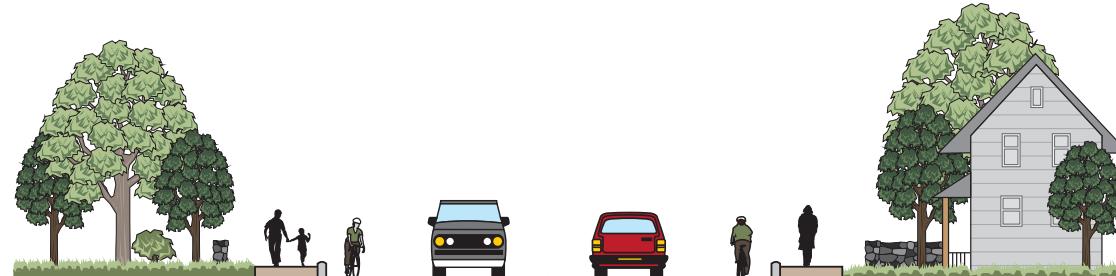

- Eliminate sidewalk gaps on Route 1A. There is currently no sidewalk on the west side of Route 1A south of Cherry Street and between Monument Street and Arbor Street.
- Ensure consistent five-foot shoulders along Route 1A for safe bicycle travel. The only exception would be at the north end of the corridor, where sharrows would be used instead to preserve the post office parking.
- Add left-turn lanes at locations with high left-turn volumes for improved safety and vehicle delay. Turn bays would be added:
 - On Route 1A northbound at all three intersections;
 - On Route 1A southbound at Arbor Street; and
 - On Cherry Street.

Arbor Street already has a turn bay in the existing geometry, which would be restriped for clarity but not otherwise changed.

- Calm traffic speeds by reducing travel lanes to 12 feet with shoulders and striped medians.

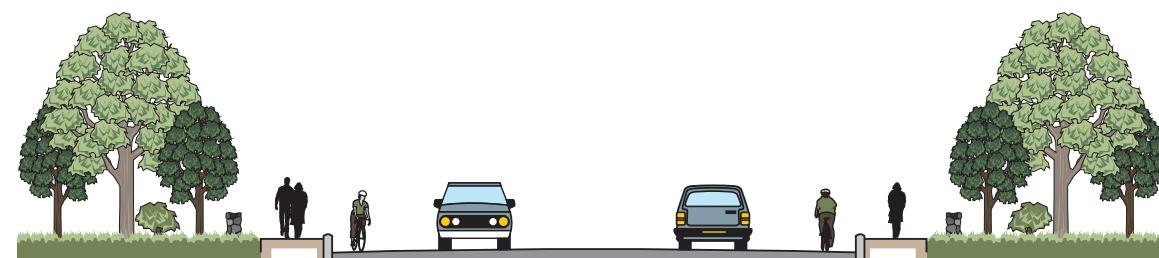

Figure 6 also presents the approximate existing pavement width (based on aerial images) and right-of-way width (based on the town assessor's database). It shows that the recommended cross-section will likely require expansion of the paved surface, although the required width mostly falls within the available right-of-way. The only possible exception is on Route 1A south of Cherry Street, where the abutting properties are close to the edge of the road, especially the private residence on the south corner of Cherry Street and Route 1A.

Proposed Total Layout Width = 53' →
Existing Pavement Width = 42' →
Estimated Right-of-Way Width = 52' →

8.2 Long-Term Improvement Alternatives

Although the issues present in the study area favor a long-term solution involving signalization, there are several options involving the number and placement of signals. MPO staff developed the following six alternatives to test different combinations of signals at the three intersections. The features and trade-offs of each alternative are discussed below.

Alternative 1: Signalize Arbor Street Intersection

Figure 7 shows the proposed geometry of Alternative 1, which would only install a traffic signal at the Arbor Street intersection. The other two intersections in the study area would be updated with the proposed cross-sections but would remain stop-controlled.

Alternative 1 would:

- Improve operations and safety at the intersection with the highest vehicular volume.
- Provide protected crossings at the intersection with the most pedestrian traffic. A crosswalk with a protected phase on both Route 1A approaches would ensure easy access to the church, town hall, post office, and shops. The existing midblock crossing near the post office could be kept or removed.
- Allow safe and fast departure from the fire and police stations with emergency vehicle preemption. The stop line on Route 1A southbound would be set back in order to ensure a clear access area for emergency vehicles at the fire station.
- Fit easily within the available right-of-way.

Drawbacks of Alternative 1 include:

- No safety or operations improvements on the other two intersections, which have more left-turns onto Route 1A.

Alternative 2: Signalize Cherry Street Intersection

Figure 8 shows the proposed geometry of Alternative 2, which would install a traffic signal at the Cherry Street intersection. As in Alternative 1, the other two intersections would keep their stop control.

Figure 7
Long-Term Improvements Conceptual Plan: Alternative 1
Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

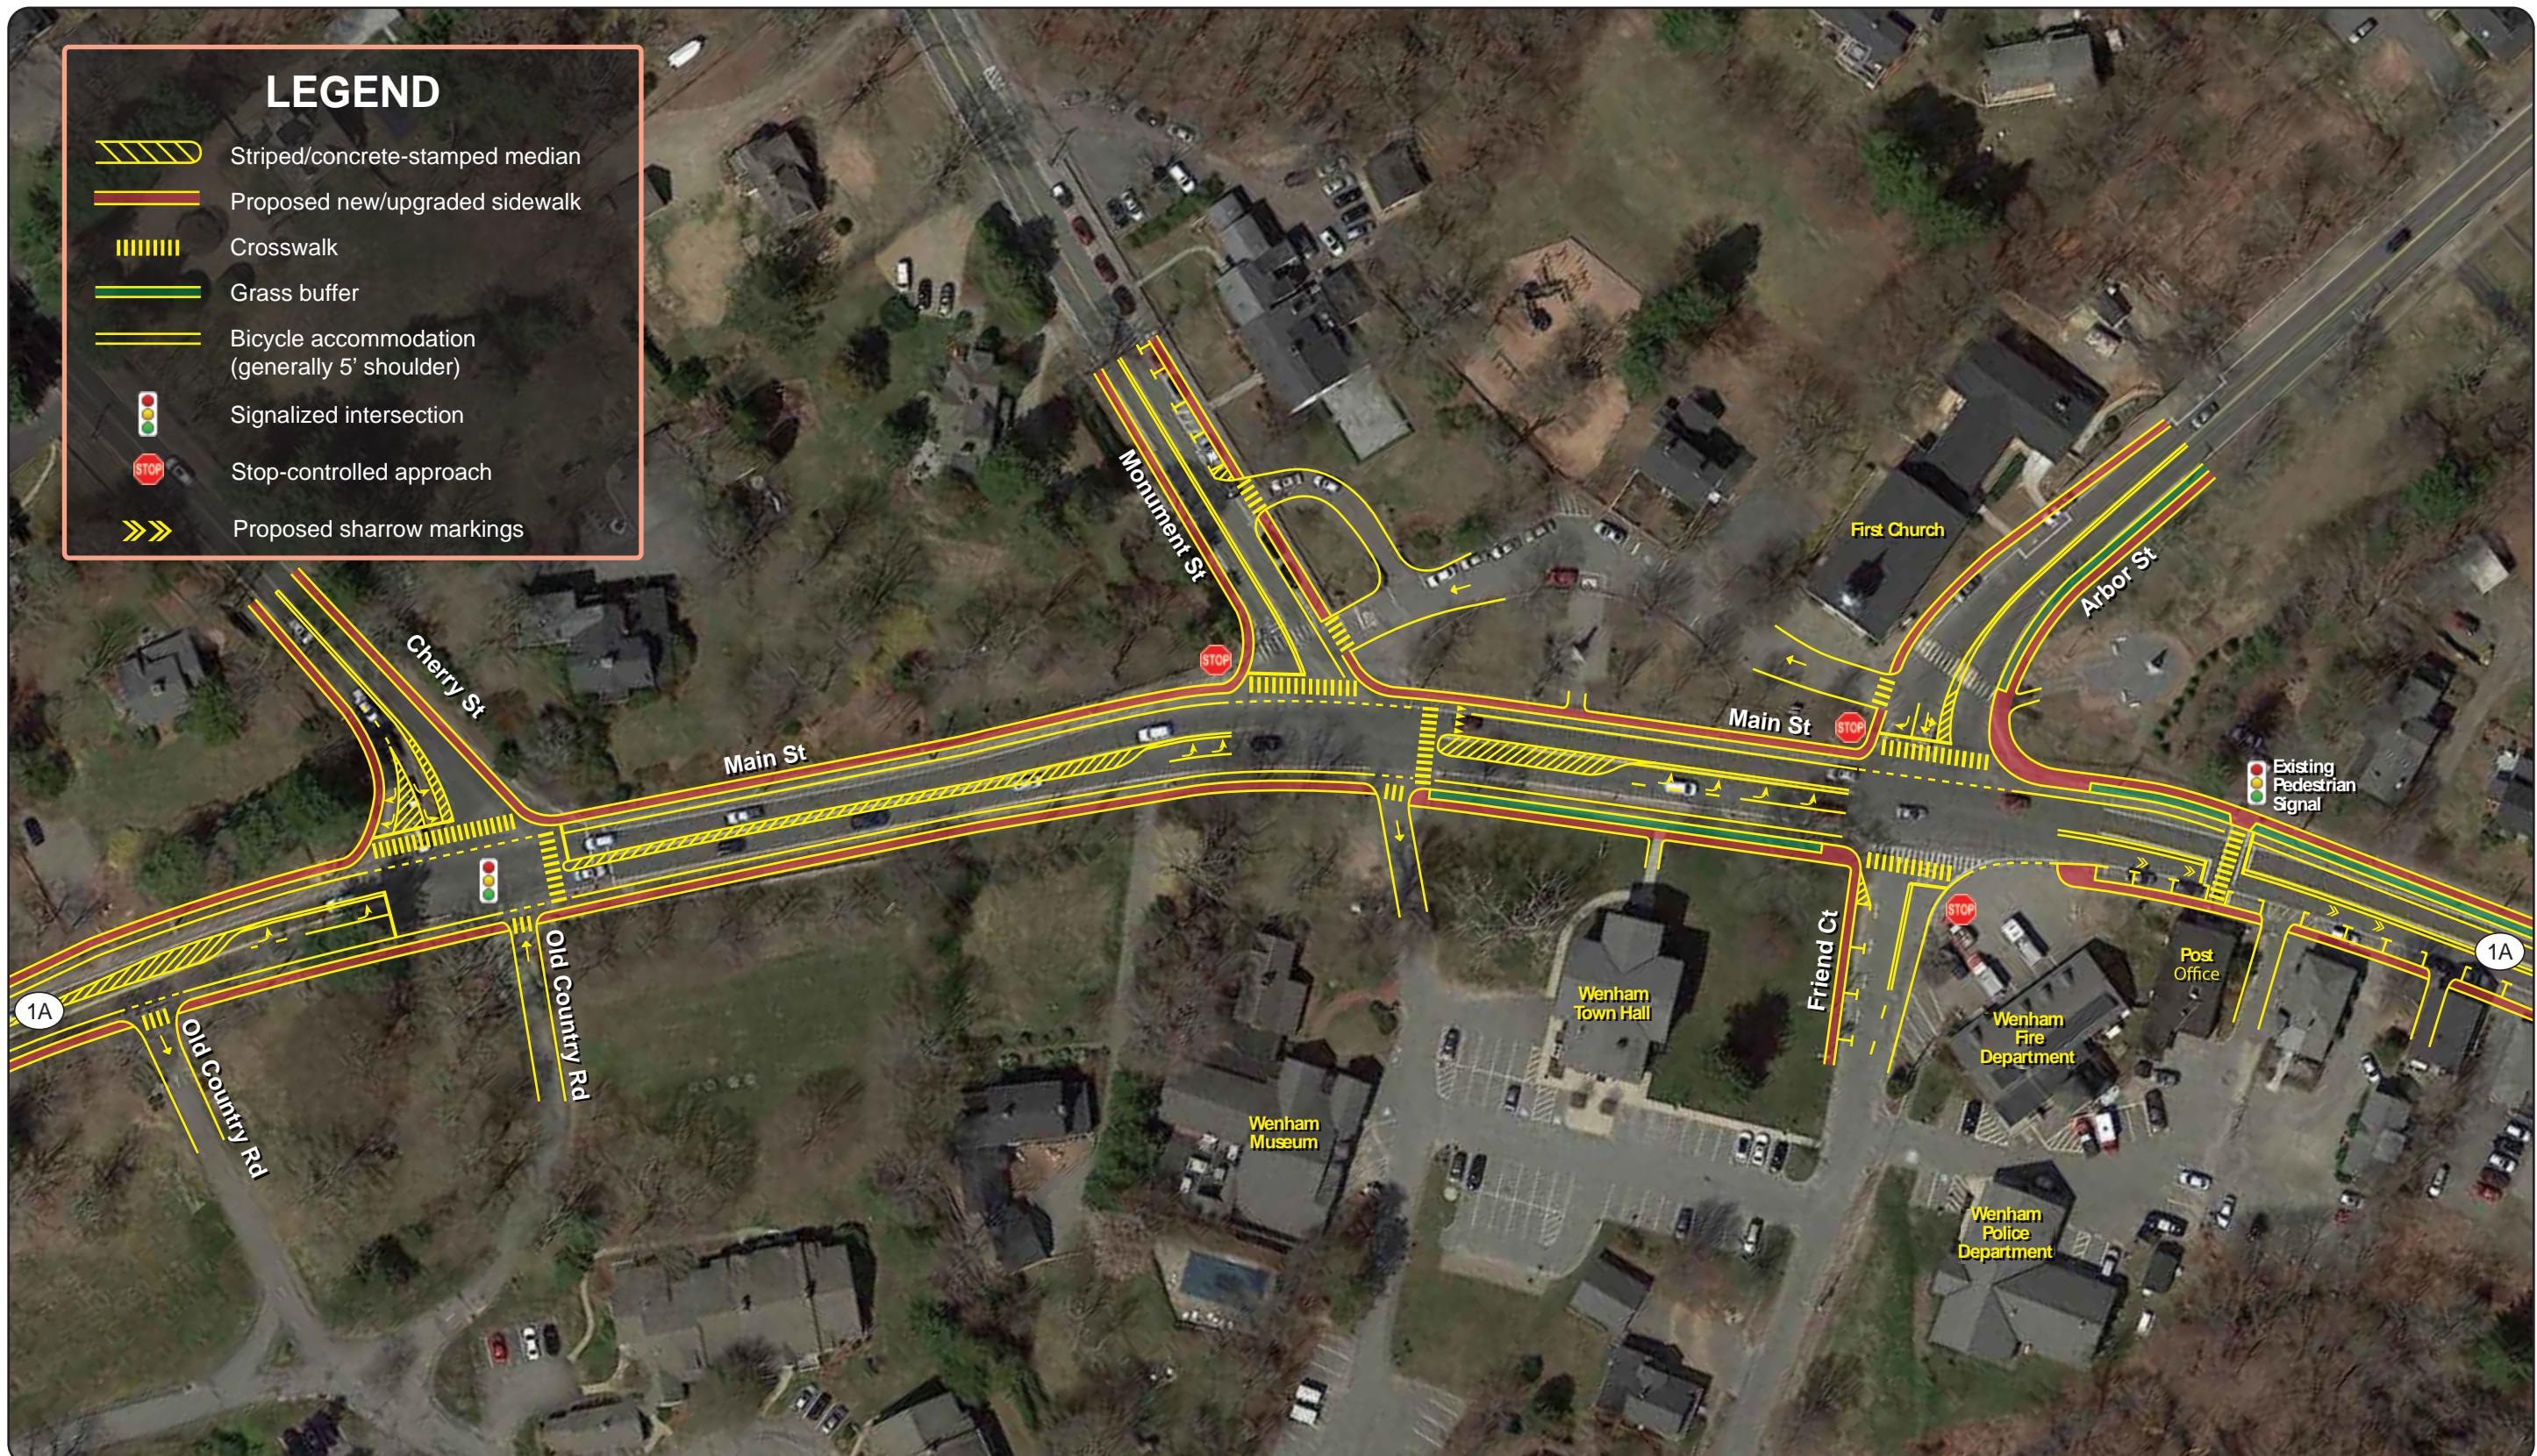

Figure 8
Long-Term Improvements Conceptual Plan: Alternative 2
Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

Alternative 2 would:

- Improve safety at the intersection with the highest crash rate.
- Improve operations at Monument Street by drawing away cut-through traffic. Currently, a significant portion of Cherry Street traffic heading to Route 1A northbound switches to Monument Street in an attempt to bypass congestion. Installing a signal at Cherry Street would reduce delay for Cherry Street traffic, making cutting through via Monument Street no longer the fastest option. MPO staff used user equilibrium analysis to estimate that 50 percent of left-turns at Monument Street would shift to Cherry Street under Alternative 2.¹¹
- Add a second signalized pedestrian crossing at the south end of the corridor, which would complement the existing signalized pedestrian signal at the north end of the corridor near the post office.
- Improve the safety on Old Country Road, which is the driveway for the Maples Retirement Home. In Alternative 2, the one-way entrance that opens into the existing intersection would change to a one-way exit and would become a signalized approach. The entrance would become an easy right turn for northbound traffic, and turning southbound traffic could wait in the striped median.

Drawbacks of Alternative 2 include:

- Tight right-of-way near Cherry Street could influence constructability.
- No safety or operations impacts on the other two intersections.
- Lack of emergency vehicle preemption at the fire station.

Alternative 3: Signalize and Coordinate Arbor Street and Monument Street Intersections

Alternatives 3 and 4 involve installing two signals to control traffic and improve safety. This would improve safety and operations for a larger portion of traffic inside the study area. However, a second signal would also represent a larger investment and require more adjustment for residents who are used to the existing configuration.

Figure 9 shows the proposed geometry of Alternative 3. In Alternative 3, two coordinated signals would be installed in the study corridor, with one at Monument Street and one at Arbor Street.

¹¹User equilibrium traffic assignment assumes that all users choose their own route towards their destination based on the travel time that will be consumed in different route options. The traffic volume assigned to each route is adjusted until the total travel time for each route is equal.

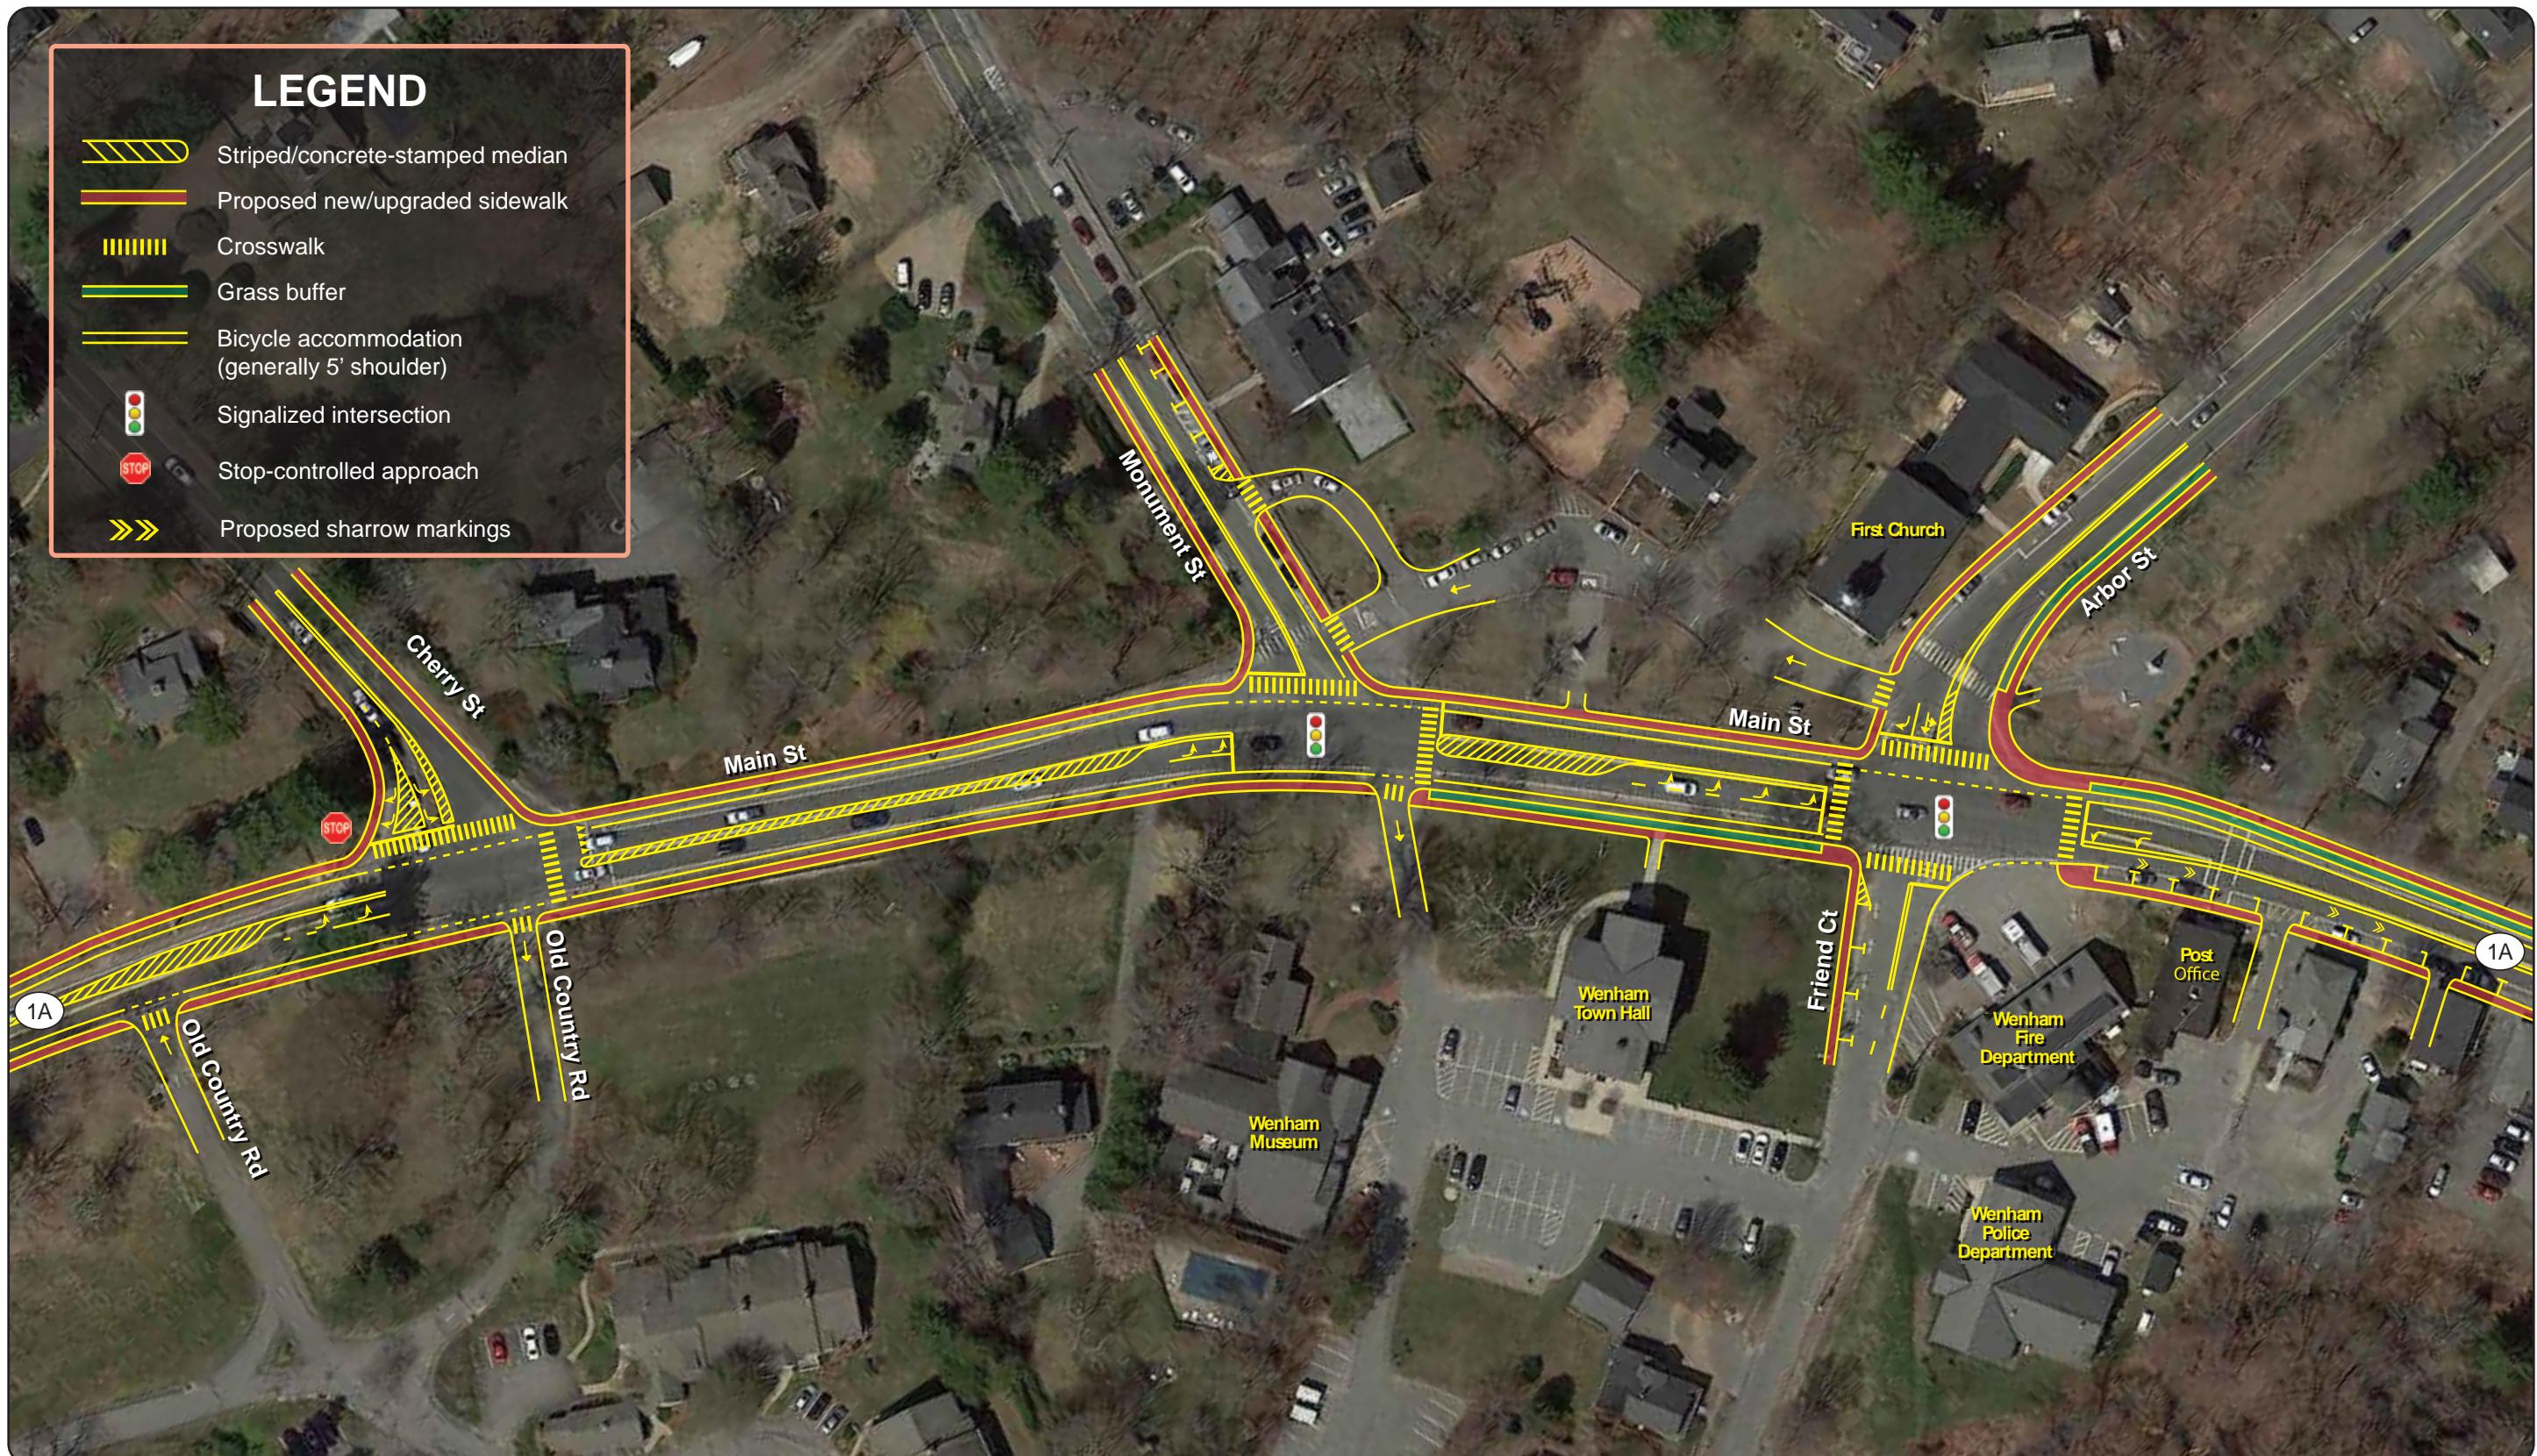

Figure 9
Long-Term Improvements Conceptual Plan: Alternative 3
Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

Alternative 3 would:

- Allow for emergency vehicle preemption, as in Alternative 1.
- Improve safety for the dangerous left turn from Monument Street onto Route 1A northbound.
- Improve operations at Cherry Street. As mentioned in Alternative 2, many of the vehicles turning left onto Route 1A northbound can choose either Cherry Street or Monument Street depending on anticipated delay. A signal at Monument Street would have the opposite effect as Alternative 2 and would shift some left-turns from Cherry Street to Monument Street. User aquarium analysis suggested 60 percent of the left-turns from Cherry Street would use Monument Street under Alternative 3.

Drawbacks of Alternative 3 include:

- Two tightly spaced intersections (approximately 200 feet apart) might present queuing and coordination problems.
- Cut-through traffic on Monument Street would be encouraged. This would also increase the volume of left turns at the unsignalized intersection of Cherry Street and Monument Street, creating a potential safety risk.

Alternative 4A and Alternative 4B: Signalize and Coordinate Arbor Street and Cherry Street Intersections

Figure 10 shows the proposed geometry of Alternative 4A and 4B. Both of these alternatives would install coordinated signals at the Cherry Street and Arbor Street intersections.

Alternative 4A would:

- Allow for emergency vehicle preemption, as in Alternative 1.
- Improve safety at the two busiest intersections, with additional effects felt at Monument Street due to 50 percent reduced cut-through traffic.
- Be easier to coordinate. The 1,000 feet between the two signals would be more than enough to prevent queues from spilling between intersections.

Drawbacks of Alternative 4A include:

- Tight right-of-way near Cherry Street could influence constructability.

Alternative 4B is a variant of Alternative 4A in which left turns from Monument Street would be completely prohibited. This traffic, which is mostly cut through, would be forced to use Cherry Street instead. The inset in Figure 10 shows the geometric modifications in Alternative 4B. Adding this restriction would be an option for the town if keeping the cut-through traffic off Monument Street is a priority. It would also improve safety at the Monument Street intersection without the cost of a signal by cutting entry volume.

Alternative 5: Signalize and Coordinate All Three Intersections

Figure 11 shows the proposed geometry of Alternative 5, which would place coordinated traffic signals at all three intersections.

Alternative 5 would:

- Permit emergency vehicle preemption.
- Maximize protected crossing options for pedestrians.
- Improve turning safety by signalizing each approach.
- Allow town engineers to roughly control the traffic on Cherry Street and Monument Street by adjusting the respective green times at those approaches.

Drawbacks of Alternative 5 include:

- Tightly packed signals could cause confusion and delay for through traffic.

Alternative 6: Install Modern Roundabouts at Arbor Street and Cherry Street Intersections

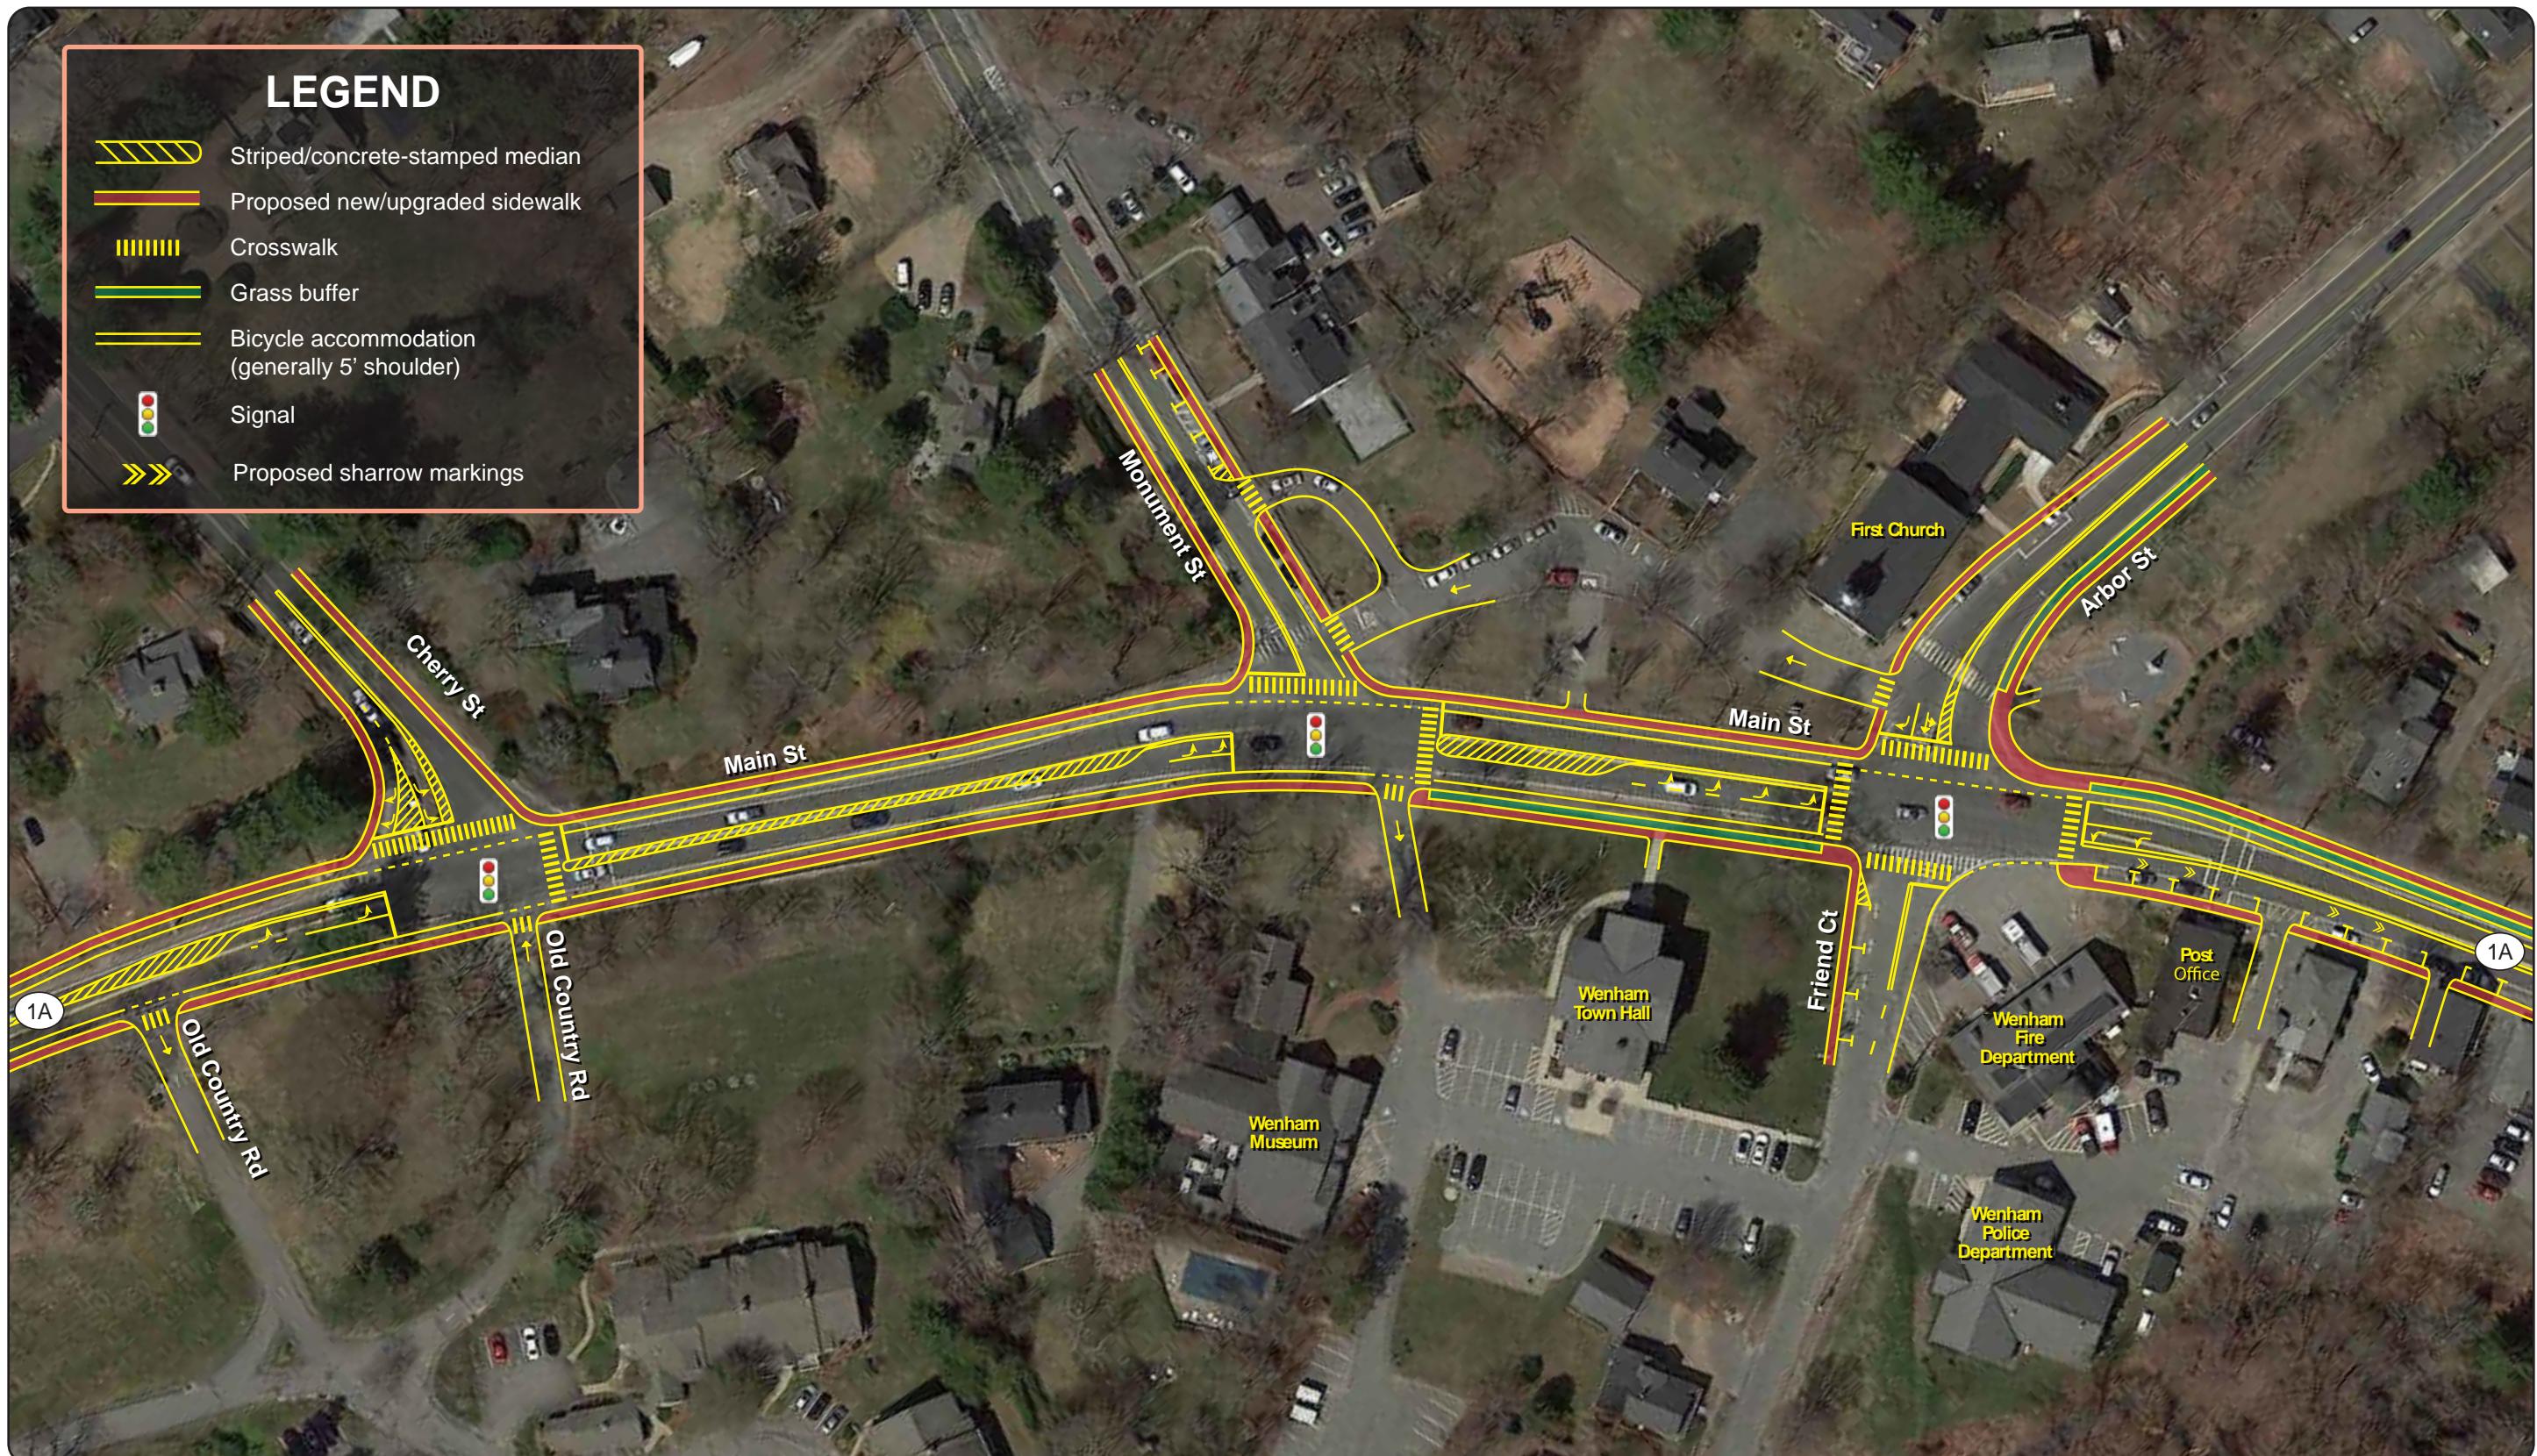

MPO staff also wanted to consider using traffic circles as an alternative to signalized control. Figure 12 shows the geometry of Alternative 6, which would install modern roundabouts at Arbor Street and Cherry Street.

Alternative 6 would:

- Improve delay for left-turning traffic.

Drawbacks of Alternative 6 include:

- Significant right-of-way impacts. The large radius required for this kind of traffic circle would greatly exceed the right-of-way and land takings would be necessary in several locations.
- Increased delay for Route 1A traffic. Typically, roundabouts are best suited for intersections with equal traffic on all approaches. Alternative 6 would improve delay for the side streets but would add delay to the much larger volume of Route 1A through traffic.
- Lack of bicycle accommodations. Geometric requirements of the roundabouts would not leave space for bicycle lanes.
- Obstruction of emergency vehicle access. The roundabout at Arbor Street would encroach on the fire station's driveway and make it difficult for emergency vehicles to exit.

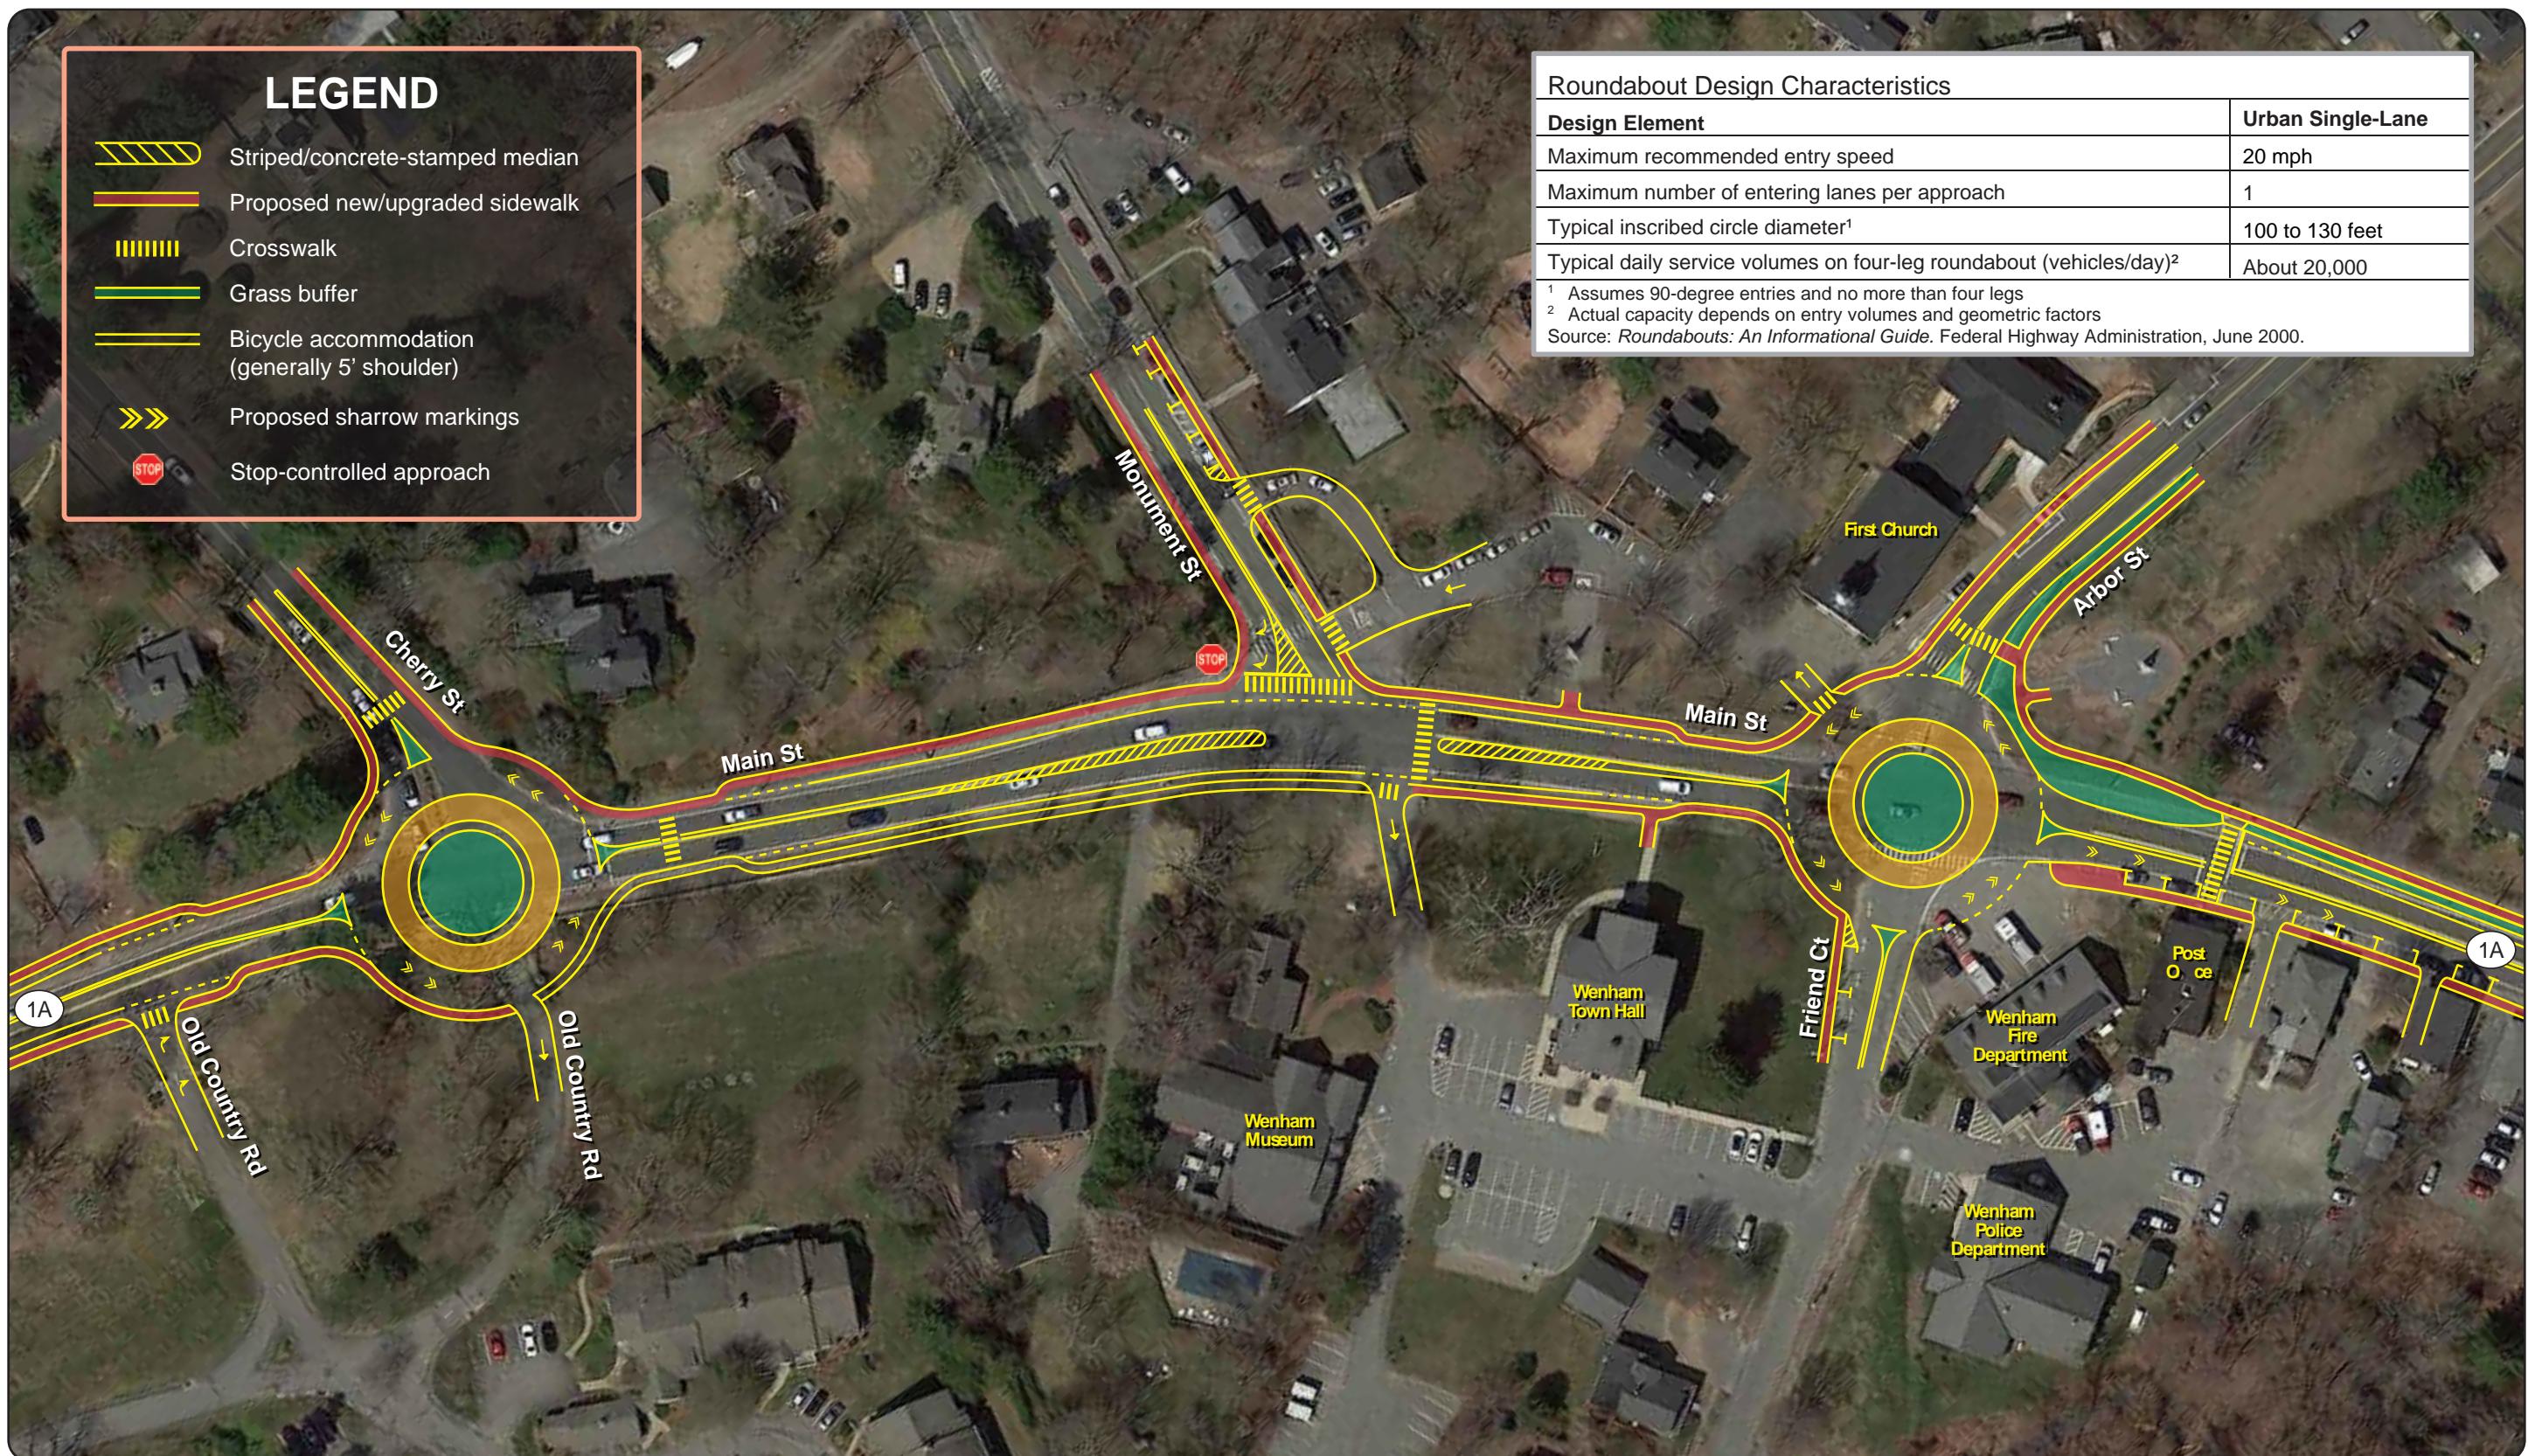

Figure 12
Long-Term Improvements Conceptual Plan: Alternative 6
Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

8.3 Level of Service of Long-Term Alternatives

MPO staff used Synchro traffic networks to model each of the long-term improvement alternatives. The capacity analysis was a particularly important tool for evaluating alternatives in this project because of the close proximity of the intersections in the study area. Tightly spaced intersections like these have complex interactions that can be difficult to anticipate using engineering judgment alone. MPO staff therefore used the traffic networks to verify that each proposed alternative would deliver the full operational benefits of signalization and provide the town with the largest possible impact from its investment.

Table 5 shows the AM peak hour level-of-service results and Table 6 shows the PM peak hour level-of-service results for the traffic network. All scenarios use 2025 traffic volumes based on regional growth predictions. For this seven-year window, the MPO regional model anticipates a uniform 2 percent growth inside the study area.¹²

As an additional check, MPO staff also tested the networks using SimTraffic simulations, which is a module included in the Trafficware Synchro 9 suite. Traffic simulations are a useful complement to the HCM methods because they provide a visual representation of system operations and because simulations can capture some aspects of complex traffic interactions that might be overlooked by the HCM formulas. For each scenario, MPO staff averaged the results of eight one-hour simulations with a 10-minute warmup period. The last row in Table 5 and Table 6 shows the average vehicle delay, which represents the total number of seconds an average vehicle experiences between the time it enters and the time it exits the study area.

In all cases, proposed traffic signals are fully actuated with exclusive pedestrian phasing. Signal cycle lengths were capped at 110 seconds to keep pedestrian delays low. Full details of the phasing, coordination, and analysis results are included in Appendix D.

¹² The traffic growth projection is based on the transportation-planning model recently developed for the MPO's Long-Range Transportation Plan. The model predicts that traffic in the Wenham downtown area would increase 0.3 percent annually from 2018 to 2025 in both AM and PM peak periods.

Simulation Average Delay		855.8			121.3			45.7			65.5			54.6			52.9			54.6			104.5		

= 95th percentile volume exceeds capacity, queue shown is after two cycles but may be longer. 95th Queue = 95th percentile queue length (feet). Delay = Average vehicle delay (seconds per vehicle). Err = Value exceeds constraints of HCM 2000 formulas. L = Left turning traffic. LOS = Level of Service. LT = Left and through traffic. LTR = Left, through, and right traffic. m = Volume for 95th percentile queue is metered by upstream signal. R = Right turning traffic. TR = Through and right traffic.

Note: Simulation average delay is calculated as the network-wide delay (seconds) experienced by an average simulation vehicle. Simulation results are averaged between eight 60-minute simulations, each with a 10-minute warm-up period.

The following conclusions can be drawn from Table 5 and Table 6.

- **2025 No-Build:** As with the existing conditions, the no-build case results in LOS F at all intersections, indicating unacceptable operations, especially on the side street approaches.
- **2025 Alternative 1:** Operations at the Arbor Street intersection are improved to LOS B, but the other two intersections remain at LOS F.
- **2025 Alternative 2:** Operations at the Cherry Street intersection improve to LOS C and Monument Street improves to LOS E/LOS D for the AM/PM peaks, respectively.
- **2025 Alternative 3:** Arbor Street improves to LOS B and Monument Street improves to LOS C. Meanwhile, despite a 60 percent reduction in volume, Cherry Street remains at LOS F. However, the 95th percentile queues show that queueing may prevent effective coordination under this configuration. The southbound queue at Monument Street is almost 1,000 feet at both peak hours, and there is only 200 available feet of storage space between the intersections. The simulation results bear out this conclusion and show much higher average delay for Alternative 3 than any of the other alternatives that use two signals.
- **2025 Alternative 4A:** All three intersections meet or exceed LOS C criteria, indicating satisfactory operations. The predicted queues should be well tolerated by the 700 feet of available queueing space between the two signals. The simulation results confirm that coordination runs smoothly in this scenario.
- **2025 Alternative 4B:** The results of Alternative 4B are approximately the same as Alternative 4A with the exception of slightly increased delay at Cherry Street caused by the diverted volume. This analysis confirms that prohibiting left turns from Monument Street is viable from an operations standpoint if the town wants to make this policy a priority.
- **2025 Alternative 5:** Every intersection operates at LOS B during both peak periods. Even though some of the queues are as long as in Alternative 3, the simulation results indicate smooth coordinated operations. Both analyses show that, despite the complexity of placing three traffic signals within one-quarter mile, coordination is still possible and Alternative 5 is a viable option. However, Alternative 5 doesn't appear to offer any performance advantage compared to the simpler two-signal alternatives.

- **2025 Alternative 6:** Although LOS at some intersections is improved when compared to the no-build case, Alternative 6 causes several of the Route 1A approaches to drop to LOS E or LOS F during both peak periods. This would introduce an unacceptable amount of delay for all through traffic and could cause queueing and delays with ripple effects beyond the study area.

8.4 Summary of Long-Term Alternatives

Table 7 summarizes all the previously discussed characteristics of the different design alternatives.

Note: All the alternatives are analyzed under future (2025) traffic conditions. The evaluation compares each alternative to the base case of 2025 no-build.

9 CONCLUSIONS AND NEXT STEPS

9.1 Conclusions

The above analyses support the need for renovations that would improve safety, operations, mobility, and emergency responsiveness at the study location.

Many of the issues present can be addressed by upgrading the pavement markings, signage, and lane configuration along the Route 1A corridor. MPO staff recommends repaving the corridor and updating the roadway cross-section as part of any selected design. The cross-sections in Figure 6 are tailored to the needs identified in the study and using a similar design would be recommended by MPO staff. However, the strategies employed in those cross-sections (tighter travel lanes, consistent shoulders for bicycles, installation of new sidewalks, clear striping and signage for pedestrian crossings, and marked turn bays) can also be adapted to other designs depending on the priorities of the town or factors such as budget, existing facilities, or available right-of-way.

The safety and operations analysis also demonstrated that signalization is warranted in the study region. Of the proposed alternatives, MPO staff recommends Alternative 4A (installation of signals at Cherry Street and Arbor Street) as the optimal solution. This alternative was shown to strike the best balance between the scope of issues addressed and the cost and complexity of the project. The Town of Wenham and MassDOT District 4 concurred that Alternative 4A is the preferred option, and MassDOT additionally expressed support for moving forward with some of the short-term improvements mentioned in the study. Comments on the proposed improvements from MassDOT and the Town are included in Appendix F.

9.2 Next Steps

MassDOT District 4 has jurisdiction of Route 1A and the intersections within the study corridor, and is responsible for renovations to improve safety, mobility, connectivity, and operations. This study gives the Town an opportunity to review the needs of the intersection and plan for design and engineering. The next step would be to select the preferred alternative that is sensitive to the goals and needs of stakeholders, and then advance the project through the planning process. These steps will depend upon cooperation between MassDOT, the Town of Wenham, and the MPO to begin the project notification and review process, and complete the project initiation form. After completing the initial steps, the Town of Wenham and MassDOT can start preliminary design and engineering to place the project in the Transportation Improvement Program. Transportation decision making is complex, and influenced by factors such as financial limitations and agency programmatic commitments. Project

development is the process that takes transportation improvements from concept to construction (see Appendix G for an overview of this process).

This study supports the MPO's visions and goals, which include increasing transportation safety, maintaining the transportation system, advancing mobility and access, reducing congestion, and expanding the opportunities for walking and bicycling, while also making them safer. If implemented, the improvements proposed in this report would increase traffic safety and modernize the roadway to accommodate all users.

Summary of Findings and Proposed Improvements (DRAFT)

Safety and Operations Analysis at Selected Intersections: Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

Study Advisory Meeting 4/26/2018

DRAFT

Study Objectives

To perform various safety and operations analyses and identify short- and long-term improvements for all transportation modes, including pedestrians, bicycles, and trucks, at the selected intersections

Study Area

Route 1A (Main Street) from Cherry Street to Arbor Street/Friend Court, including the three intersections and their adjacent areas (**Figure 1**)

Existing Conditions

- Functional classes: urban principal arterial (Route 1A), minor arterials (Cherry Street, Monument Street, and Arbor Street), and local street (Friend Court)
- Route 1A (Main Street) average daily traffic: about 15,000 to 20,000 vehicles/day
 - Cherry Street: about 4,500 vehicles/day
 - Monument Street: about 3,800 vehicles/day
 - Arbor Street: about 6,500 vehicles/day
- Weekday peak-hour traffic, pedestrian, and bicycle volumes (**Figure 2**)
- Route 1A speed regulation: 30 MPH in the study area and 35 MPH in Wenham
 - Cherry Street speed regulation: 25 MPH and 35 MPH north of Monument Street
 - Monument Street speed regulation: 30 MPH
 - Arbor Street speed regulation: 30 MPH
- Crash Data Analysis
 - Collision Diagram: Wenham Police Department crash data 2011–17 (**Figure 3**)
 - Crash Statistics Summary: WPD crash data 2011–17 (**Appendix A**)
 - Intersection Crash Rates (**Appendix B**)
 - Corridor Crash Rate (**Appendix C**)
- Traffic Signal Needs Analysis (**Appendix D**)

Major Issues and Concerns

- Traffic congestions and delays at all three intersections
- High intersection crash rate at Cherry Street
- High corridor crash rate in the Route 1A study section
- Pedestrian crossing access and safety
- Bicycle accommodation and safety
- Town emergency response and operations
- Wide intersection layouts allowing fast traffic causing potential conflicts

Proposed Short- and Long-Term Improvements

- **Horizon of improvements**
 - Short-term: under 2 years
 - Long-Term: more than 2 years
- **Short-Term Improvements (*Figure 4*)**
 - Restripe Route 1A between Cherry Street and Arbor Street to add a left-turn lane/median and to include shoulders for bicycle accommodation
 - Increase pedestrian signal crossing time at the post office crosswalk
 - Double up pedestrian crossing warning signs
 - Add yield line (shark teeth) approaching Route 1A crosswalks
 - Clearly define on-street parking spaces
- **Long-Term Improvement Alternatives**
 - Alternative 1: Signalize Arbor Street Intersection (*Figure 5*)
 - Alternative 2: Signalize Chery Street Intersection (*Figure 6*)
 - Alternative 3: Signalize and Coordinate Arbor Street and Monument Street Intersections (*Figure 7*)
 - Alternative 4A: Signalize and Coordinate Arbor Street and Cherry Street Intersections (*Figure 8*)
 - Alternative 4B: Same as alternative 4A and Prohibit Left Turns on Monument Street (*Figure 8*)
 - Alternative 5: Signalize and Coordinate All Three Intersections (*Figure 9*)
 - Alternative 6: Install Modern Roundabouts at Arbor Street and Cherry Street Intersections (*Figure 10*)
 - Proposed Route 1A Cross-Sections in the Study Area (*Figure 11*)

Evaluation of Long-Term Improvement alternatives

- Summary of Synchro Analysis Results (**Tables 1 and 2**)
- Discussion of preferred Alternatives

Study Scoping Meeting Summary (Draft)

Safety and Operations Analysis at Selected Intersections Route 1A at Cherry Street, Monument Street, and Arbor Street in Wenham

Wenham Town Hall, Thursday, February 15, 2018

Meeting Participants

Town of Wenham, MassDOT Office of Transportation Planning, MassDOT Highway Division District 4, and Central Transportation Planning Staff (see attached list of the study advisory members)

Study Background

This study builds on recommendations generated by the Boston Region Metropolitan Planning Organization's (MPO) Congestion Management Process (CMP) to address safety and congestion problems at intersections in the MPO area. Several similar studies were completed in previous funding years and received favorable responses from municipalities, which included appreciation of the MPO's assistance with the conceptual design of low-cost improvements and the planning and implementation processes.

The intersections selected for study in recent years under this program are:

- Broadway at Fourth and Fifth Street in Chelsea (2016)
- Route 114 (Andover Street) at Esquire Drive and Violet Road in Peabody (2016)
- Route 53 (Washington Street) and Broad Street in Weymouth (2014)
- Route 109 (Medway Road) and Kmart Driveway in Milford (2014)
- Route 109 (High Street) and Nahatan Street in Westwood (2014)
- Route 109 (High Street) and Pond Street in Westwood (2014)

Reports for these studies can be found on the MPO website:

http://www.ctps.org/recent_studies#corridor_and_subarea

Study Objectives

To perform various safety and operations analyses and identify short- and long-term improvements for all transportation modes, including pedestrians, bicycles, and trucks, at the selected intersections

Study Area

Route 1A (Main Street) from Cherry Street to Arbor Street/Friend Court, including the three intersections and their adjacent areas (Figure 1)

Roadway and Intersection Characteristics Overview

- Functional classes: urban principal arterial (Route 1A), minor arterials (Cherry Street, Monument Street, and Arbor Street), and local street (Friend Court)
- Generally two-lane roadways in the study area
- Jurisdiction: MassDOT Highway Division District 4
- Route 1A (Main Street) average daily traffic: about 15,000 to 20,000 vehicles/day
- Cherry Street average daily traffic: about 4,500 vehicles/day
- Monument Street average daily traffic: about 3,800 vehicles/day
- Arbor Street average daily traffic: about 6,500 vehicles/day
- All three intersections are currently unsignalized, with stop controls on side streets
- Route 1A speed regulation: 30 MPH in the study area and 35 MPH in Wenham
- Cherry Street speed regulation: 25 MPH in the northbound direction, passing Monument Street 35 MPH (need to confirm these for the southbound direction)
- Monument Street regulation: 30 MPH
- Arbor Street speed regulation: 30 MPH
- Sidewalks exist on both sides of Route 1A, except the west side between Monument Street and Arbor Street.
- No dedicated bike lanes exist on all roadways.
- Roadway shoulders generally are two to four feet wide, except the Route 1A southbound section from the post office to Monument Street (eight to ten feet wide).
- Right-of-Way (based on MassDOT Roadway Inventory File): 52 feet wide (Route 1A), 40 feet wide (Cherry Street and Arbor Street), and 46 feet wide (Monument Street).
- Adjacent land uses: mainly residential, except a business district on the east side of Route 1A north of Friend Court
- On-street parking is allowed only on Route 1A northbound in the business district.
- Route 1A adjacent parcels are under the Historical District zoning.

MassDOT 2011–15 Crash Data Overview

- Collision Diagram (see Figure 2)
- 55 crashes occurred in study area in the five-year period (Table 1), about evenly distributed at the three intersections (Tables 2–4)
- One bicycle crash and no pedestrian crashes.
- Individual intersection crash rates are generally near or slightly higher than the average for the unsignalized intersections in MassDOT District 4 (0.56 crashes per million entry vehicles).
- Route 1A Town Center segment crash rate: 7.91 crashes per million vehicle miles traveled (MVMT), much higher than the State average for urban principal arterials (3.23 crashes/MVMT)

Issues and Concerns

- Traffic congestion and operations:
 - Route 1A, connecting Route 128 in Beverly, through Wenham, Hamilton, Ipswich, and Rowley, to Route 1 in Newburyport, is a significant roadway in the

region. During the AM and PM peak commuting hours, Route 1A traffic flows continuously. At the three unsignalized intersections, vehicles approaching Route 1A from the minor streets (Cherry Street, Monument Street, Arbor Street, and Friend Court) endure extensive delays. Traffic queues of ten or more vehicles are often observed.

- During the peak hours, left turns from Route 1A northbound to Cherry Street and to Arbor Street frequently block or interfere with Route 1A through traffic. The turns are difficult because of the continuous opposite traffic on Route 1A.
- Left turns from Route 1A southbound to Friend Court is also difficult because the opposite traffic often forms in two lanes (although the roadway striped as one) and occupies the intersection.
- Monument Street splits from Cherry Street about 2,000 feet north of Route 1A and is used as a short cut to Route 1A northbound. It is relatively straight and wide and the residents complain about speeding traffic.
- During peak hours, drivers take their chances in choosing between Cherry Street and Monument Street to Route 1A northbound. Both streets at Route 1A seem to be equally congested. Traffic count data show that the left-turn volumes at Monument Street are generally higher than that at Cherry Street.
- The three intersections are all relatively wide, creating long pedestrian crossing distances. Also the stop bars are rarely obeyed because drivers have to pull ahead in order to see traffic on Route 1A.
- Wenham Fire Station is located at the northeast corner of the intersection of Route 1A and Arbor Street/Friend Court. Wenham Police Department is located on Friend Court just next to the fire station. Under the current unsignalized intersection setting, it is very difficult for them to operate safely and efficiently when responding to emergencies. There is a critical need for a traffic control device with emergency vehicle preemption (Opticom) capable of stopping general traffic from all directions.
- The apron area in front of the fire station should be preserved for the maneuvers of fire engines and other emergency vehicles.
- The driveway in front of Wenham First Church is located close to Route 1A and is frequently used as a short cut to Monument Street, especially when Route 1A traffic is busy.
- In the summer, the church driveway is used as a drop-off/pick-up site for a popular summer camp. At the time, traffic at the intersection can be chaotic. Temporary signage has to be set up to prohibit left turns into the driveway directly from Route 1A and parents are advised to use Perkins Street (further north on Route 1A) and Arbor Street eastbound to the driveway. Some parents park in the town hall parking lot and walk with their children across Route 1A.
- An elementary school is located about 1,000 feet north of the Route 1A/Arbor intersection. During the school opening and closing hours (8:00–9:00 AM and 2:30–3:30 PM), the intersection can have a sudden surge of traffic by the school drop-off and pick-up trips. Some parents also used the church driveway to bypass Route 1A.
- During the summer, Route 1A traffic increases due to the trips to Crane Beach.

- Truck traffic issues: Route 1A truck traffic proportion seems to be high, as there is a major composting facility (Brick Ends Farm) in Hamilton. CTPS will examine the vehicle classification counts on Route 1A.
- Pedestrian and bicycle accommodations:
 - There are three crosswalks on Route 1A in this town center area: one on the north side of Cherry Street, one on Monument Street (north side), and one at the post office north of Arbor Street. Pedestrian crossings are generally difficult as Route 1 traffic is continuous and generally does not stop for pedestrian crossings, except the one at the post office.
 - The post office crosswalk is equipped with a traffic signal and pedestrian push buttons that can stop Route 1A traffic for pedestrian crossings. The pedestrian crossing time is about 15 seconds in total (eight seconds of “walk” plus seven seconds of “flashing don’t walk”). The time can be somewhat tight for seniors and children. MassDOT District 4 will examine the setting.
 - There is no crosswalk across Route 1A at Arbor Street. People who park in the town hall parking lot going to First Church or the nearby parks (the civil war memorial and the recently established veterans’ memorial) usually cross Route 1A near Arbor Street without using the marked crosswalks that are far away.
 - There is a sidewalk gap on the west side of Route 1A from Arbor Street to Monument Street.
 - Route 1A is a popular bicycle route to reach the beach areas in Ipswich, Newbury, and Newburyport. Cycling activities on Route 1A increases in the weekends and in the summer time. The area in front of the fire station is a popular gathering and rest spot by cyclists.
 - Outside the study area, Route 1A in Wenham generally contains shoulders of four to five feet on both sides to accommodate bicycles. In the study area, only the west side of Route 1A has wide shoulders to accommodate bicycles.
- Safety concerns and issues:
 - Pedestrian crossings on Route 1A is a major concern as described above.
 - Cyclists have to ride with traffic on Route 1A northbound due to the lack of bicycle accommodation.
 - At the Route 1A/Arbor Street intersection, the major concern is the operations of emergency vehicles and their potential conflicts with the approaching traffic on Route 1A.
 - At the Route 1A/Monument Street intersection, almost half of the crashes are left-turn crashes caused by aggressive left-turns from Monument Street.
 - At the Route 1A/Cherry Street intersection, the proportion of left-turn crashes is also relatively high. There are a number of rear end crashes possibly caused by left-turn blocking the through traffic.
- Business parking and access related issues:
 - On-street parking in the business district is somewhat tight and too close to Route 1A traffic stream.
 - People sometimes use the driveway next to the post office to as a cut-through from Route 1A southbound to access Friend Court or return to Route 1A northbound. This can interfere with the operations of emergency vehicles in the police station parking lot.

Study Process and Development of Potential Improvement Alternatives

- Existing conditions AM and PM peak-hour Synchro models
- Base case (2025 no-build Synchro models)
- Traffic signal alternatives
 - One individual signal at Arbor Street/Friend Court
 - Two coordinated signals at Cherry Street and at Monument Street
 - Two coordinated signals at Cherry Street and at Arbor Street/Friend Court, with Monument Street left turns to Route 1A prohibited or being converted to one-way westbound operation
 - Three coordinated signals
- Preliminary analysis of modern roundabout alternative

Data Collection and Needs

- Average weekday traffic, intersection turning movements (including pedestrians and bicycles), and spot speed studies were collected by MassDOT in last November and recently provided to CTPS
- Recent three-year crash reports (2014 January–2016 December) in the study area provided by Wenham Police Department
- Right-of-way information (to use the assessors' maps from the Town website)

Study Procedure and Schedule

- Data collection and site investigations (January–February)
- Roadway existing conditions analysis, including Synchro traffic simulations (January–February)
- Crash data analysis, including crash statistics summary, collision diagrams, and review of hazardous locations (February–March)
- Development of short- and long-term improvement alternatives (March)
- Analysis and evaluation of improvement alternatives, through synchro tests and traffic simulations (March)
- Producing conceptual plans of proposed improvement alternatives (April)
- Review of findings and proposed improvement alternatives with the study advisory members (April)
- Revision and report drafting (May–June)
- Draft report review by the study advisory members (July)

BOSTON REGION METROPOLITAN PLANNING ORGANIZATION

Stephanie Pollack, MassDOT Secretary and CEO and MPO Chair

Karl H. Quackenbush, Executive Director, MPO Staff

TECHNICAL MEMORANDUM

DATE: January 18, 2018

TO: Boston Region MPO

FROM: Seth Asante, Chen-Yuan Wang, and Ben Erban

RE: Safety and Operations Analyses at Selected Intersections: Federal Fiscal Year 2018

1 BACKGROUND

This memorandum presents the results of Task 1 (Select Study Locations) of the work program for Safety and Operations Analyses at Selected Intersections: Federal Fiscal Year (FFY) 2018.¹

This study builds on recommendations generated by the Boston Region Metropolitan Planning Organization's (MPO) Congestion Management Process (CMP) to address safety and congestion problems at intersections in the MPO area. Several similar studies were completed in previous funding years and received favorable responses from municipalities, which included appreciation of the MPO's assistance with the conceptual design of low-cost improvements and the planning and implementation processes.

Previous studies examined large, complex intersections, simpler intersections, and locations that include two or more adjacent intersections. The focus for FFY 2018 is on simpler intersections. Locations that would potentially require major geometry redesigns, such as grade separation or adding travel lanes on an arterial roadway, were considered to be less suitable for this study.

As in the past, the basic requirement for a location to qualify as a study candidate is that it must be located on an arterial roadway in the Boston Region MPO where 1) it has safety and operational concerns and 2) the agencies and/or municipalities with jurisdiction over the roadway are committed to implementing recommended improvements.

¹ Karl H. Quackenbush, CTPS Executive Director, memorandum of a work program to the Boston Region MPO, "Work Program for Safety and Operations Analyses at Selected Intersections," November 16, 2017.

2 SELECTION PROCEDURE

The study selection process consisted of the following four steps completed by the MPO:

- 1) Generate a list of potential intersection study locations then narrow it to 10 locations
- 2) Gather detailed data for each of the 10 locations
- 3) Apply specific criteria to examine potential study locations more closely
- 4) Score and rate the 10 locations, and assign low, medium, or high priority to each intersection location

2.1 Generating List of Potential Locations

MPO staff used the following sources to develop an initial list of nearly 50 potential study locations in the MPO area:

- FFY 2016 safety and operations list of potential candidates
- Suggested locations from Unified Planning Work Program outreach

The following exclusion criteria were developed to narrow the list of locations:

- Located in a municipality that has been selected for this study within the past three years
- Located in a subregion that has been well- or over-represented in past subregional priority corridor projects in terms of the proportion of population or Massachusetts Department of Transportation (MassDOT) top-200 high-crash locations in the region
- Studied by MPO staff or another agency; included in a Transportation Improvement Program (TIP) project with a status of “advertised” or “programmed,” or included in an active MassDOT or other agency project that is in design (at 25 percent or higher design status), in construction, or recently completed
- Considered part of a larger potential study area, such as a highway interchange or a long traffic corridor with an extensive area of congestion
- Considered not at-grade

2.2 Gathering Detailed Data

Staff gathered data to support the exclusion criteria and eliminated locations that were not suitable. The assembled data for 10 intersection locations in 10 municipalities in the MPO region are listed below.

- MassDOT’s 2015 Road Inventory File. To collect the following information for each major arterial segment in each intersection location: roadway jurisdiction, National Highway System (NHS) status, and annual average daily traffic (AADT)

- MassDOT's Transportation Data Management System. Recently updated AADT counts were retrieved from MassDOT's online database
- MassDOT's 2010–14 Crash Database. Identify high-crash locations and numbers of crashes
- MPO CMP Data on Arterial Congestion. Determine travel-time index (that is, travel time in the peak period divided by travel time in free-flow conditions) for each major arterial segment intersection location
- MPO Data on Bike Network Gaps and MassDOT Bike Facilities. Identify bicycle needs—including connectivity—and accommodation
- Data on Massachusetts Bay Transportation Authority (MBTA) Bus Service Performance and Passenger Load. Determine the percentage of bus trips that do not adhere to the schedule (late service) or to passenger load standards (crowding)
- Data on MBTA Subway and Commuter Rail Lines. Identify locations serving MBTA stations
- Data from the following sources were also included:
 - Data selected from MassDOT's project-information and roadway safety audit databases
 - The MPO's 2016–20 TIP projects
 - MPO planning (and other) studies
 - Municipal websites (to obtain data on projects, studies, and TIP projects planned or programmed for each arterial segment)

Table 1 (at the end of this memorandum) presents the data assembled for each intersection location, community, Metropolitan Area Planning Council (MAPC) subregion, MassDOT district office, jurisdiction, equivalent property damage only crashes, total crashes, fatal crashes, injury crashes, property damage only and non-reported crashes, bicycle and pedestrian crashes, top-200 crash clusters, crash clusters that are eligible for Highway Safety Improvement Program (HSIP) funding, transit routes, a list of relevant studies or projects, and staff comments. The table also shows the results of applying the selection criteria and the priority rating, which was performed in the fourth step of this process (described below).

2.3 Applying Criteria

MPO staff further examined the intersection locations by applying the five criteria cited below (each item is worth one point):

- *Safety Conditions, 0–2 Points*
 - Location has an estimated crash rate that is higher than the district average
 - Location has a significant number of pedestrian and bicycle crashes per year (more than three), or has truck traffic safety concerns

- *Multimodal Significance, 0–2 Points*
 - Location needs improved transit, bicycle, or pedestrian facilities
 - Location has a high volume of truck traffic serving regional commerce
- *Regional Significance, 0–2 Points*
 - Location carries a significant portion of regional traffic (AADT is greater than 15,000 on at least one intersecting road)
 - Location is essential for the region's economic, cultural, or recreational development
- *Regional equity, 0–2 Points*
 - Location is in an MPO subregion that is at least slightly under-represented in previous safety and operations analyses in terms of the proportion of population or number of MassDOT top-200 high-crash locations in the region
 - Location is in an MPO subregion that is very under-represented in previous safety and operations analyses in terms of the proportion of population or number of MassDOT top-200 high-crash locations in the region
- *Implementation Potential, 0–2 Points*
 - Location has strong potential for implementation based on the urgent need for safety improvements
 - Location is proposed or endorsed by its roadway administrative agency or agencies and has strong support from other stakeholders (for example, municipalities, MassDOT, and subregions)

In addition, no two locations in the same town would be selected.

2.4 Scoring and Rating

Intersection locations with a score of four or fewer points were rated low priority; those with a score of five to seven points were rated medium priority; and those with a score of eight or more points were rated high priority. Five locations were given a high-priority rating and four a medium-priority rating by MPO staff based on safety, operations, multimodal and regional significance, and support from agencies and municipalities.

Staff examined the high-priority segments more closely. Locations within the following parameters were not suitable candidates for this cycle of safety and operations analyses:

- Locations that were recently or are currently under study
- Locations that exhibited a density of closely spaced intersections that suggest that a corridor study is needed
- Locations that were selected for the FFY 2018 Subregional Priority Corridors study

3 SELECTED INTERSECTIONS FOR STUDY

Based on the evaluation above, staff selected two intersections for study: 1) Route 1A (Main Street) at Cherry Street, Monument Street, and Arbor Street in Wenham; and 2) Route 126 (Hartford Avenue) at Maple Street in Bellingham.

- 1) *Route 1A (Main Street) at Cherry Street, Monument Street, and Arbor Street in Wenham:* The Town of Wenham and MassDOT District 4 requested MPO staff to study three major intersections on Route 1A from Cherry Street to Arbor Street. The primary issues raised were safety and operational concerns for users of all modes, including pedestrians and bicyclists.

The three intersections are located close to each other within a short distance of 750 feet and serve a high volume of traffic on the regional arterial of Route 1A corridor. Additionally, several properties are located adjacent to these intersections, including the town hall, police department, fire department, the Maples Retirement Home, and First Church. The combination of these factors has caused safety concerns for all the users, especially for residents frequently visiting the area.

All three intersections are currently unsignalized, and preliminary traffic signal needs analyses performed by MassDOT show that they satisfy the first three warrants of Manual on Uniform Traffic Control Devices. However, the three intersections should be further examined together in a comprehensive study under the existing town center context.

- 2) *Route 126 (Hartford Avenue) at Maple Street in Bellingham:* The Town of Bellingham requested MPO's assistance in addressing the safety and operational concerns at this intersection, especially on the truck operational and safety issues.

The Town expressed that the intersection at Hartford Avenue and Maple Street carries a high proportion of truck traffic and is undersized to accommodate large commercial vehicles safely and efficiently. The intersection is just one-half mile south of the interchange of Interstate 495 and Route 126, where a number of large commercial uses exist.

Meanwhile, a significant portion of Maple Street, currently zoned industrial, houses a power plant, multiple warehouses, mulch- and lumber-producing facilities, and vacant land for future developments.

In addition, an elementary school that serves all of North Bellingham is located on Route 126, less than 100 feet north of the intersection. The traffic and pedestrian access to the school should also be considered in further study. The intersection is suitable for this study because of the issues and concerns from these different travel modes.

Staff also evaluated the pedestrian accommodation and safety improvement needs for the two locations by applying the Pedestrian Report Card Assessment that the MPO recently developed.² The two selected locations are highly qualified for pedestrian accommodation or safety improvement requirements. Appendix A contains detailed results of the assessments.

4 SUMMARY

The recommended intersection locations meet the selection criteria of this study because of their potential for safety and operations improvements. The work scope for this study assumed that “as many as three” locations would be selected. Staff selected two locations that contain a total of four intersections. Appendix B contains the support letters from MassDOT and stakeholders in Wenham and Bellingham.

Staff will submit these recommendations to the MPO for discussion. If the MPO endorses the study selections, staff will meet with officials from Wenham, Bellingham, and MassDOT to discuss study specifics, conduct field visits, collect data, and perform analyses.

² Pedestrian Level-of-Service Memorandum, Ryan Hicks and Casey-Marie Claude, Boston Region Metropolitan Organization, January 19, 2017.

TABLE 1. FFY 2018 Safety and Operations for Selected Intersections
Selected locations are highlighted in green

Location	Community	MAPC Subregion	MassDOT District	Jurisdiction	Street 1	Route 1	Street 2	Study, Project, or TIP Project	EPDO Crashes 2012-14	Total Crashes 2012-14	Injury Crashes 2012-14	Bike/Ped Crashes 2012-14	Top 200 Crash Clusters 2012-14	HSIP-eligible Crash Clusters 2012-14	Transit Routes	Safety Conditions	Multimodal Significance	Regional Significance	Regional Equity	Implementation Potential	Total Score	Rating	Comments
1	Wenham	NSTF	4	MassDOT	Main Street	Route 1A	Cherry Street Monument Street Arbor St / Friend Ct	None	76	36	10	1	0	0	None	2	2	2	2	2	10	High	Wenham and MassDOT District 4 requested MPO staff to study these three major intersections on Route 1A. The primary issues raised were safety and operational concerns for users of all modes, including pedestrians and bicyclists. To fully address these issues, the three intersections should be examined together under the existing town center context.
2	Bellingham	SWAP	3	Town	Hartford Avenue	Route 126	Maple Street	#604862: Bellingham- Ramp Construction and Relocation, I-495 At Route 126 (Hartford Avenue) (half a mile south of location) (TIP project, preliminary design phase, last update 2007) #605239: Bellingham- Franklin- Bridge Preservation - Hartford Ave over I-495 (half a mile south) (Complete 2012)	12	8	1	0	0	0	None	1	2	2	2	2	9	High	The Town of Bellingham requested MPO's assistance in addressing the safety and operational concerns at this intersection, especially on the truck operational and safety issues. A future study should also consider traffic and pedestrian safety from an elementary school adjacent to the intersection.
3	Danvers	NSTF	4	MassDOT	Andover Street	Route 114	Garden Street	Project 605383 Danvers- Peabody- Resurfacing and Related Work on Route 114 (completed in 2011)	97	37	15	1	1	1	None	2	2	2	1	1	8	High	This intersection was studied as part of the FFY 2011 Priority Corridors: Route 114 Study in Danvers. That study proposed improvements for addressing safety and operations at the intersection.
4	Cambridge	ICC	6	DCR and City	Mount Auburn Street and Fresh Pond Parkway	Route 3	Coolidge Hill Road	None	101	41	15	1	1	1	MBTA 71 and 73	2	2	2	2	0	8	High	Comments from MPO outreach indicate pedestrian safety issues and traffic congestion and operations concerns at Mount Auburn Street/Coolidge Hill Road. DCR interest is critical for this study due to the proximity of Route 3/Fresh Pond Parkway at Mount Auburn Street.
5	Marlborough	MetroWest	3	MassDOT	Boston Post Road West	Route 20	Northboro Road East (Shopping Plaza)	#601133: Marlborough- Roadway Reconstruction Including Signals, Route 20 (Boston Post Road) From The Northboro Cl To Felton St. (2004) #608467: Marlborough- Resurfacing And Related Work On Route 20 (Unknown Location) (Planned for 2019 TIP)	92	68	6	4	0	1	MWRTA Route 7	2	2	2	1	1	8	High	A Route 20 study in Marlborough is recommended for the MPO FFY 2016 Subregional Priority Corridors Study. This location was not selected because of the geographic equity consideration applied in the selection study locations.
6	Boston	ICC	6	DCR	Jamaicaway		Bynner Street	None	122	50	18	2	1	1	None	1	2	2	1	1	7	Medium	Potential candidate for a safety and operations study. The location is in the current list of Top 200 High-Crash Intersections. The City of Boston expressed interest, but the DCR did not indicate interest.
7	Salem	NSTF	4	Town	North Street	Route 114	Mason Street	#605332: Salem- Bridge Replacement, S-01-001, (St 114) North Street Over North River - Is just south of the intersection. (TIP project, begins 2021) #608521: Salem- Bridge Maintenance, S-01-018 (32t), (St 114) North Street Over (St 107) Bridge Street and MBTA - a little further down (TIP project, begins 2018)	102	45	12	6	1	1	MBTA 465	1	2	2	1	1	7	Medium	This location was not selected because the crash cluster at this location includes two signalized intersections and four unsignalized intersections in a half-mile distance. An arterial segment study is more suitable for this location. In addition, a Route 1A study involving Swampscott, Salem, and Marblehead has been recommended for the MPO FFY 2016 Subregional Priority Corridors Study, and so, because of geographic equity considerations, this location is not recommended for that reason as well.
8	Boston	ICC	6	MassDOT	Columbia Road		Buttonwood Street	#603412: Boston- Traffic Signal And Safety Improvements, Route I-93 Ramps At Columbia Road - is adjacent to intersection. (Complete 2005)	79	27	13	0	0	1	MBTA 8, 18, and 41	2	1	1	2	1	7	Medium	Potential candidate for a safety and operations study. This unsignalized intersection is located between two busy and closely spaced signalized intersections.
9	Newton	ICC	6	City	Commonwealth Avenue	Route 30	Washington Street	None	22	14	2	1	0	0	MBTA 505	0	2	1	2	1	6	Medium	Potential candidate for a safety and operations analysis.
10	Sherborn	SWAP	3	Town	Washington Street	Route 16	S Main Street (Route 27)	None	46	18	7	0	0	0	None	1	1	1	1	0	4	Low	Location was studied by CTPS and VHB in 2002 and 2004. Improvements were not implemented. A UPWP comment suggested that this could be a good location for demand response signal.

Acronyms and Abbreviations

BAT = Brockton Area Transit Authority. CATA = Cape Ann Transit Authority. CTPS = Central Transportation Planning Staff. DCR = Department of Conservation and Recreation. EPDO = Equivalent property damage only. FFY = Federal fiscal year. HSIP = Highway Safety Improvement Program. ICC = Inner Core Committee. MAPC = Metropolitan Area Planning Council. MassDOT = Massachusetts Department of Transportation. MBTA = Massachusetts Bay Transportation Authority. MetroWest = MetroWest Regional Collaborative. MPO = Boston Region Metropolitan Planning Organization. MWRTA = MetroWest Regional Transit Authority. NSPC = North Suburban Planning Council. NSTF = North Shore Task Force. SWAP = South West Advisory Planning Committee. TIP = Transportation Improvement Program. TRIC = Three Rivers Interlocal Council. UPWP = Unified Planning Work Program.

Selection Criteria

Safety Conditions: Intersection has a HSIP-eligible crash cluster, a top-200 high-crash location, and/or a significant number of HSIP-eligible clusters of pedestrian or bicycle crashes.

Congested Conditions: Intersection experiences delays during peak periods.

Multimodal Significance: Intersection currently supports transit, bicycle or pedestrian activities, needs improved facilities for these activities, and/or has high truck traffic serving regional commerce.

Regional Significance: Intersection is on the National Highway System, carries a significant proportion of regional traffic, lies within 0.5 miles of Environmental Justice transportation analysis zones, and/or is essential for the region's economic, cultural, or recreational development.

Regional Equity: Intersection is underrepresented in previous safety and operations studies in terms of the proportion of population or number of top-200 high-crash locations.

Implementation Potential: Intersection has strong potential for implementation based on the urgent need for safety improvements, is proposed or endorsed by its roadway administrative agency or agencies, and/or has strong support from other stakeholders.

Notes

1. Locations are in order of their ratings based on scoring from selection criteria.

2. EPDO Crash Rating = 10 * Fatal Crashes + 5 * Injury Crashes + 1 * Other Crashes (Property Damage Only or Unknown Severity), based on MassDOT top-200 high-crash locations: 2012-14 crash data.

3. HSIP-eligible crash clusters are defined by MassDOT as crash clusters that rank within the top five percent of crash clusters for each Regional Planning Agency, based on the EDPO index. In the Boston region the 921 intersections in the top five percent have crash clusters with a minimum EDPO value of 42.

Mark Abbott, Manager
Traffic Analysis and Design Group
Central Transportation Planning Staff
Boston Region Metropolitan Planning Organization
10 Park Plaza, Suite 2150
Boston, MA 02116-3968

Dear Mr. Abbott:

I am writing on behalf of MassDOT District 4 to express our support for further traffic analysis of three intersections on Main Street (Route 1A) in Wenham. These intersections are located at Cherry Street, Monument Street and Arbor Street/Friend Court.

The District's Traffic Operations Section had recently worked with the Town on a traffic signal warrant analysis of the three intersections. It was determined that MUTCD Warrants 1, 2 and 3 (volume-related warrants) were met. Since Warrants 1A and 1B, Eight-Hour Vehicular Volume, were satisfied for each of the locations, any of them would be solid candidates for a traffic signal.

To determine the true feasibility of such a project, further study in the form of a Functional Design Report (FDR) is needed. I understand that an FDR may be eligible for funding through a FY18 UPWP study entitled "Safety and Operations at Selected Locations" being conducted by your group. The Town is committed to improving safety in this area of Route 1A and is willing to complete 25% design for a project, if selected for the study. MassDOT District 4, therefore, believes that further study of the locations should be funded and completed.

Thank you for your consideration. If you have any further questions on this matter, please contact me at (781)641-8322.

Sincerely,

Paul D. Stedman
District Highway Director

Mark Abbott, Manager
Traffic Analysis and Design Group
Central Transportation Planning Staff
Boston Region Metropolitan Planning Organization
Ten Park Plaza, Suite 2150
Boston, MA 02116-3968

Dear Mr. Abbott,

I would like to take this opportunity to express my strong support for the Town of Wenham. In particular, the Board of Selectmen's recent funding request for further traffic analysis regarding three intersections on Main Street in downtown Wenham, located at Cherry Street, Monument Street, and Arbor Street / Friend Court.

Given that the Main Street corridor (Route 1A) is a state road, the town worked with MassDOT District 4 Traffic Operations to complete a traffic signal warrant analysis earlier this year, which resulted in positive findings. With that, I note that all three intersections on Main Street meet the MUTCD Signal Warrants 1, 2, and 3. Noting such, I believe the relative data sufficiently satisfies Warrant 1A and 1B for Eight-Hour Vehicular traffic, with any of these locations satisfying the requirements for signal installation.

Considering such, the town is in need of assistance in determining project feasibility, specifically a Functional Design Report (FDR), which may be funded through a FY18 UPWP Study (Safety and Operations at Selected Locations). When considering the town's demonstrated commitment to addressing public safety concerns related to traffic volume, together with the number of motor vehicle crash incidents in these locations on Route 1A, I firmly believe a comprehensive operational and safety analysis of these three intersections can/should be funded and completed.

I further note, if your office is able to support/fund conducting an FDR, the town agrees to be responsible for completing a 25% design to continue to move forward with this project. This, together with the town's ongoing efforts is just another example of their demonstrated and genuine commitment to public safety.

Accordingly, I seek your careful consideration of the Town of Wenham's request for FDR funding. Thank you for such, and please don't hesitate to contact me directly should you have any questions.

Sincerely,

Bruce E. Tarr
State Senator
Minority Leader

Mark Abbott
Manager, Traffic Analysis and Design Group
Central Transportation Planning Staff
Boston Region Metropolitan Planning Organization
Ten Park Plaza, Suite 2150
Boston, MA 02116-3968

Dear Mr. Abbott,

I am writing on behalf of the Board of Selectmen to express our strong support for further traffic analysis regarding three intersections on Main Street in downtown Wenham, located at Cherry Street, Monument Street, and Arbor Street / Friend Court. Since the Main Street corridor is also a state roadway, Route 1A, we worked with MassDOT District 4 Traffic Operations to complete a traffic signal warrant analysis earlier this year.

The attached findings from that report show that these three intersections on Main Street all meet the MUTCD Signal Warrants 1, 2, and 3. Since the data satisfies Warrant 1A and 1B for Eight-Hour Vehicular Volume, our understanding is that any of these locations would be strong candidates to have a signal installed. However, the Town now needs assistance in completing the next step to determine the feasibility of this project, a Functional Design Report (FDR).

According to our Town Administrator, this project may be eligible for funding through a FY18 UPWP study entitled "Safety and Operations at Selected Locations". Given the community's ongoing public safety concerns about traffic volume and accidents along this corridor on Route 1A, we hope that your office is able to support conducting an FDR so that a comprehensive operational and safety analysis of these three intersections can be completed. We understand that, if funded, conceptual alternatives would be included in the scope of work, but that the Town would then be responsible for completing 25% design to continue to move forward with this project.

Thank you for your consideration. Please contact our Town Administrator, Peter Lombardi, at 978-468-5520 x. 2 or plombardi@wenhamma.gov if you have any further questions.

Best regards,

Jack Wilhelm
Chair, Wenham Board of Selectmen

Re: Technical Assistance Request – Roadway Intersection Redesign – Hartford Avenue and Maple Street

The Town of Bellingham respectfully requests technical assistance from the Central Transportation Planning Staff for the intersection redesign of Hartford Avenue and Maple Street.

Hartford Avenue at Exit 18 hosts a large inventory of commercial uses and, moving eastward, a dense residential area. In addition, a public elementary school, which services all of North Bellingham, and a small community center are located at the intersection of Hartford Avenue and Maple Street.

The intersection of Hartford Avenue and Maple Street operates well for standard motorized vehicles. However, it is over burdened by commercial vehicles. This cannot be avoided due to the proximity to I-495 and the Town's desire to retain significant acreage of industrial zoned parcels along Maple Street (See attached Zoning Map). Current industrial uses along Maple Street consist of a power plant, multiple warehouses exceeding 600,000 square feet of space, and large scale mulch and lumber hauling and production. These bring with them numerous trips by large tractor trailers.

Unfortunately this intersection is severely undersized to function properly for its desired use. The Town has recognized the need to upgrade Maple Street in order to sufficiently maintain industrial uses along this corridor. Through a public/private partnership, the town of Bellingham has begun the redesign process for the southern intersection of Maple Street and Route 140 and will be investing over \$2 Million dollars during the improvement and construction process. In a separate improvement project, the Town has invested over \$1 Million dollars to repave and correct drainage in a large section of Maple Street to better service the zoned uses. Improvement of the Hartford Avenue and Maple Street intersection is an important step in the improvement process to properly upgrade Maple Street to adequately service the industrial uses along this road and to allow large vehicles to access Route I-495 as quickly and safely as possible.

Town Officials will be available to assist and offer comments during the design process and to coordinate any public meetings that are required. Please do not hesitate to contact us if more information is necessary.

Re: Technical Assistance Request – Roadway Intersection Redesign – Hartford Avenue and Maple Street

Dear Mr. Abbot:

The Town of Bellingham Board of Selectmen is writing to express our enthusiastic support for the Town's proposal "Roadway Intersection Redesign – Hartford Avenue and Maple Street".

This intersection is severely undersized to function properly for its desired use. The Town has recognized the need to upgrade Maple Street in order to sufficiently maintain industrial uses along this corridor as well as unlock future investment. Through a public/private partnership, the town of Bellingham has begun the redesign process for the southern intersection of Maple Street and Route 140 and will be investing over \$2 Million dollars during the improvement and construction process. In a separate improvement project, the Town has invested over \$1 Million dollars to repave and correct drainage in a large section of Maple Street to better service the zoned uses. Improvement of the Hartford Avenue and Maple Street intersection is an important step in the improvement process to properly upgrade Maple Street to adequately service the industrial uses along this road and to allow large vehicles to access Route I-495 as quickly and safely as possible.

The support of the Metropolitan Planning Organization and the Central Transportation Planning Staff will be critical to following through on this important project. Thank you in advance for considering our proposal.

Sincerely,

Michael J. Soter, Chairman
Board of Selectmen

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 0 (0%), Referenced to phase 4:NBTL and 8:SBTL, Start of Green, Master Intersection

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.60

Intersection Signal Delay: 13.6

Intersection LOS: B

Intersection Capacity Utilization 70.6%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 104 (95%), Referenced to phase 4:NBT and 8:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.84

Intersection Signal Delay: 20.7

Intersection LOS: C

Intersection Capacity Utilization 70.3%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 8 (7%), Referenced to phase 4:NBTL and 8:SBT, Start of Green

Natural Cycle: 120

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.95

Intersection Signal Delay: 31.4

Intersection LOS: C

Intersection Capacity Utilization 78.6%

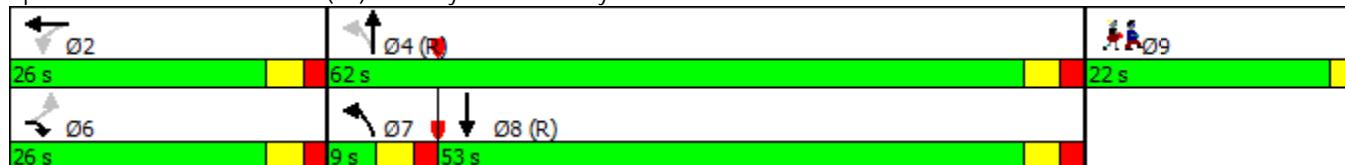

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 14 (13%), Referenced to phase 4:NBT and 8:SBT, Start of Green

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.83

Intersection Signal Delay: 25.0

Intersection LOS: C

Intersection Capacity Utilization 76.6%

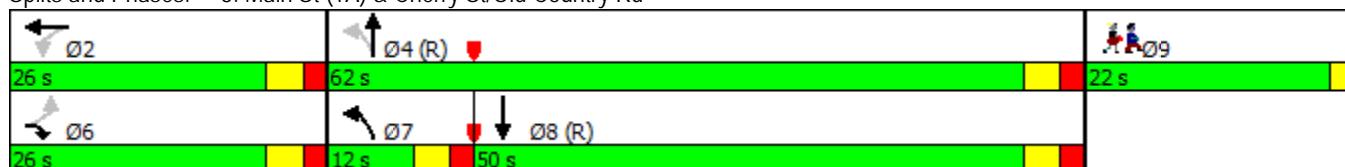

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 7 (6%), Referenced to phase 4:NBTL and 8:SBT, Start of Green

Natural Cycle: 140

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.05

Intersection Signal Delay: 44.9

Intersection LOS: D

Intersection Capacity Utilization 81.5%

ICU Level of Service D

Analysis Period (min) 15

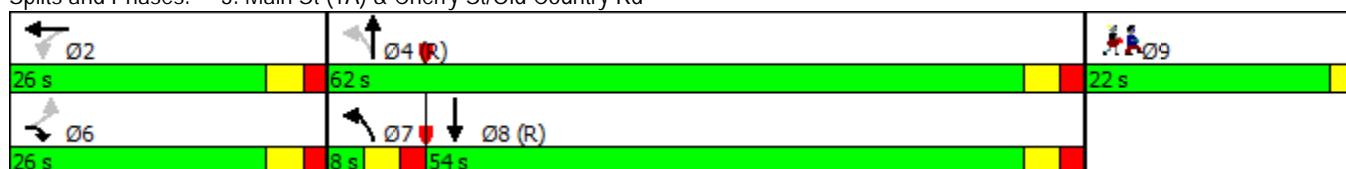

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 16 (15%), Referenced to phase 4:NBT and 8:SBT, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.94

Intersection Signal Delay: 32.0

Intersection LOS: C

Intersection Capacity Utilization 79.2%

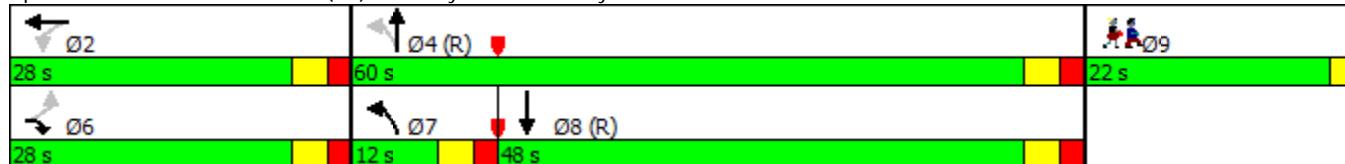

ICU Level of Service D

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 6 (5%), Referenced to phase 4:NBTL and 8:SBT, Start of Green

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.76

Intersection Signal Delay: 14.4

Intersection LOS: B

Intersection Capacity Utilization 71.7%

ICU Level of Service C

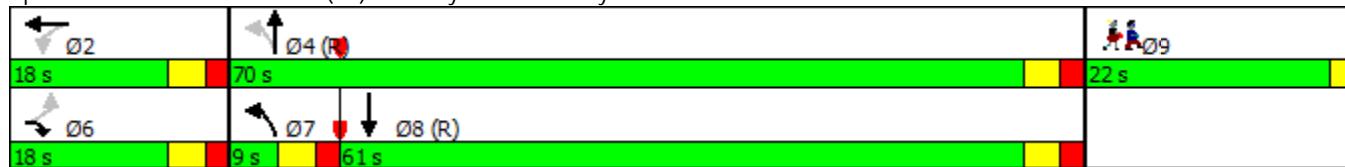

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 105 (95%), Referenced to phase 4:NBT and 8:SBTL, Start of Green

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.78

Intersection Signal Delay: 14.8

Intersection LOS: B

Intersection Capacity Utilization 66.2%

ICU Level of Service C

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

3 crashes

MET **MET** **MET** **NOT MET**

Warrants 1, 2, 3, and 7 in Manual on Uniform Traffic Control Devices (MUTCD) Chapter 4C were applied to this intersection.

Warrant 1 (Eight-hour Volume) is fulfilled. It requires that the traffic conditions (observed vehicular volumes higher than the specified minimum volumes) exist for each of any eight hours of an average day. Both Condition A (minimum vehicular volume) and Condition B (interruption of continuous traffic) were met in this case.

Warrant 2 (Four-hour Volume) is fulfilled. It requires that the traffic conditions (main street combined/minor street maximum volume falling above an applicable curve) exist for each of any four hours of an average day. The lower threshold volume for a minor street of one lane is 80 vehicles per hour (vph).

Warrant 3 (Peak-hour Volume) is fulfilled. It requires either that delay for a minor approach exceeds a threshold value, or that the existing traffic volumes are plotted above the applicable curve for any single hour of an average day. Only the volume condition was used, and this intersection exceeds the required volumes for all but two of the studied hours.

Warrant 7 (Crash Experience) is NOT fulfilled. Only three crashes likely to be corrected by signalization were observed during 2017, the most recent 12 months for which data are available.

Table E–2
Summary of Hourly Volumes and Warrant Analyses
Route 1A (Main Street) at Monument Street, Wenham

Hourly period starting	Route 1A (major street)		Monument St. (minor street)	Sum of main street	Maximum of minor street	Volumes above the required minimum on main/minor street

2
crashes

Warrants 1, 2, 3, and 7 in MUTCD Chapter 4C were applied to this intersection.

Warrant 1 (Eight-hour Volume) is fulfilled. It requires that the traffic conditions (observed vehicular volumes higher than the specified minimum volumes) exist for each of any eight hours of an average day. Condition B (interruption of continuous traffic) was met in this case due to high volumes along Route 1A.

Warrant 2 (Four-hour Volume) is fulfilled. It requires that the traffic conditions (main street combined/minor street maximum volume falling above an applicable curve) exist for each of any four hours of an average day. The lower threshold volume for a minor street of one lane is 80 vph.

Warrant 3 (Peak-hour Volume) is fulfilled. It requires either that delay for a minor approach exceeds a threshold value, or that the existing traffic volumes are plotted above the applicable curve for any single hour of an average day. Only the volume condition was used, and this intersection exceeds the required volumes for seven different hours.

Warrant 7 (Crash Experience) is NOT fulfilled. Only two crashes likely to be corrected by signalization were observed during 2017, the most recent 12 months for which data are available.

Table E–3
Summary of Hourly Volumes and Warrant Analyses
Route 1A (Main Street) at Cherry Street, Wenham

Hourly period starting	Route 1A (major street)		Cherry Street (minor street)	Sum of major street	Maximum of minor street	Volumes above the required minimum on main/minor street

8
crashes

Warrants 1, 2, 3, and 7 in MUTCD Chapter 4C were applied to this intersection.

Warrant 1 (Eight-hour Volume) is fulfilled. It requires that the traffic conditions (observed vehicular volumes higher than the specified minimum volumes) exist for each of any eight hours of an average day. Both Condition A (minimum vehicular volume) and Condition B (interruption of continuous traffic) were met in this case.

Warrant 2 (Four-hour Volume) is fulfilled. It requires that the traffic conditions (main street combined/minor street maximum volume falling above an applicable curve) exist for each of any four hours of an average day. The lower threshold volume for a minor street of one lane is 80 vph.

Warrant 3 (Peak-hour Volume) is fulfilled. It requires either that delay for a minor approach exceeds a threshold value, or that the existing traffic volumes are plotted above the applicable curve for any single hour of an average day. Only the volume condition was used, and this intersection exceeds the required volumes for eight different hours.

Warrant 7 (Crash Experience) is fulfilled. Eight crashes likely to be corrected by signalization were observed during 2017, the most recent 12 months for which data are available.

APPENDIX F:
COMMENTS ON PROPOSED IMPROVEMENTS FROM
STUDY ADVISORY MEMBERS

Comments from the Town of Wenham

From: Peter Lombardi <PLombardi@wenhamma.gov>
Sent: Monday, May 07, 2018 2:55 PM
To: 'Chen-Yuan Wang'
Cc: 'Benjamin Erban'; 'Mark Abbott'
Subject: RE: Wenham Study Comments

Flag Status: Flagged

Hello Chen-Yuan,

After reviewing this with the Board of Selectmen at their meeting last Tuesday and circling back with my Dept Heads, our consensus is in line with MassDOT's and your recommendation: Alternative 4A (coordinated lights at Cherry and Arbor) is preferred. We also agree that Alternative 1 (Arbor) is the preferred location if only 1 light is installed after we go through the public process and get feedback from more residents.

Thank you again and look forward to your final report. Please let us know if you need anything else from us in the meantime.

Peter

Subject: RE: Wenham Study Scoping Meeting 2/15/2018 Draft Summary

Flag Status: Flagged

Hi Chen-Yuan,

Below are the comments from MassDOT District 4 on the Wenham Scoping meeting last Thursday.

- Alternative 4A is our preferred alternative. Alternative 4B can be installed after the intersections are signalized, if it is determined that a left-turn lane is needed for safety or operations.
- If the town decides on only one signal, the MassDOT District 4 preferred alternative is Alternative 1 (signal at Arbor Street/Friend Court)
- Short term accommodations which MassDOT can currently accommodate:
 - Signal timing changes at the pedestrian signal at Main street in front of the post office
 - Adding Pedestrian Warning Sign to both sides of crosswalks at Cherry Street and Monument Street.
- We will not be able to accommodate resurfacing on Rt 1A in Wenham this year.
 - MassDOT will develop a pavement marking plan based on the 'short-term' plan for implementation when Route 1A is resurfaced.

Please let me know if you have any questions.

Thanks!
Sara

APPENDIX G:
MASSDOT HIGHWAY DIVISION'S PROJECT
DEVELOPMENT PROCESS

Overview of the Project Development Process

Transportation decision-making is complex and can be influenced by legislative mandates, environmental regulations, financial limitations, agency programmatic commitments, and partnering opportunities. Decision-makers and reviewing agencies, when consulted early and often throughout the project development process, can ensure that all participants understand the potential impact these factors can have on project implementation. Project development is the process that takes a transportation improvement from concept through construction.

The MassDOT Highway Division has developed a comprehensive project development process which is contained in Chapter 2 of the *MassDOT Highway Division's Project Development and Design Guide*. The eight-step process covers a range of activities extending from identification of a project need, through completion of a set of finished contract plans, to construction of the project. The sequence of decisions made through the project development process progressively narrows the project focus and, ultimately, leads to a project that addresses the identified needs. The descriptions provided below are focused on the process for a highway project, but the same basic process will need to be followed for non-highway projects as well.

1. Needs Identification

For each of the locations at which an improvement is to be implemented, MassDOT leads an effort to define the problem, establishes project goals and objectives, and defines the scope of the planning needed for implementation. To that end, it has to complete a Project Need Form (PNF), which states in general terms the deficiencies or needs related to the transportation facility or location. The PNF documents the problems and explains why corrective action is needed. For this study, the information defining the need for the project will be drawn primarily, perhaps exclusively, from the present report. Also, at this point in the process, MassDOT meets with potential participants, such as the Metropolitan Planning Organization (MPO) and community members, to allow for an informal review of the project.

The PNF is reviewed by the MassDOT Highway Division district office whose jurisdiction includes the location of the proposed project. MassDOT also sends the PNF to the MPO, for informational purposes. The outcome of this step determines whether the project requires further planning, whether it is already well supported by prior planning studies, and, therefore, whether it is ready to move forward into the design phase, or whether it should be dismissed from further consideration.

2. Planning

This phase will likely not be required for the implementation of the improvements proposed in this planning study, as this planning report should constitute the outcome of this step. However, in general, the purpose of this implementation step is for the project proponent to identify issues, impacts, and approvals that may need to be obtained, so that the subsequent design and permitting processes are understood.

The level of planning needed will vary widely, based on the complexity of the project. Typical tasks include: define the existing context, confirm project need, establish goals and objectives, initiate public outreach, define the project, collect data, develop and analyze alternatives, make recommendations, and provide documentation. Likely outcomes include consensus on the project definition to enable it to move forward into environmental documentation (if needed) and design, or a recommendation to delay the project or dismiss it from further consideration.

3. Project Initiation

At this point in the process, the proponent, MassDOT Highway Division, fills out a Project Initiation Form (PIF) for each improvement, which is reviewed by its Project Review Committee (PRC) and the MPO. The PRC is composed of the Chief Engineer, each District Highway Director, and representatives of the Project Management, Environmental, Planning, Right-of-Way, Traffic, and Bridge departments, and the MassDOT Federal Aid Program Office (FAPO). The PIF documents the project type and description, summarizes the project planning process, identifies likely funding and project management responsibility, and defines a plan for interagency and public participation. First the PRC reviews and evaluates the proposed project based on the MassDOT's statewide priorities and criteria. If the result is positive, MassDOT Highway Division moves the project forward to the design phase, and to programming review by the MPO. The PRC may provide a Project Management Plan to define roles and responsibilities for subsequent steps. The MPO review includes project evaluation based on the MPO's regional priorities and criteria. The MPO may assign project evaluation criteria score, a Transportation Improvement Program (TIP) year, a tentative project category, and a tentative funding category.

4. Environmental Permitting, Design, and Right-of-Way Process

This step has four distinct but closely integrated elements: public outreach, environmental documentation and permitting (if required), design, and right-of-way acquisition (if required). The outcome of this step is a fully designed and permitted project ready for construction. However, a project does not have to be fully designed in order for the MPO to program it in the TIP. The sections below provide more detailed information on the four elements of this step of the project development process.

Public Outreach

Continued public outreach in the design and environmental process is essential to maintain public support for the project and to seek meaningful input on the design elements. The public outreach is often in the form of required public hearings, but can also include less formal dialogues with those interested in and affected by a proposed project.

Environmental Documentation and Permitting

The project proponent, in coordination with the Environmental Services section of the MassDOT Highway Division, will be responsible for identifying and complying with all applicable federal, state, and local environmental laws and requirements. This includes determining the appropriate project category for both the Massachusetts Environmental Protection Act (MEPA) and the National Environmental Protection Act (NEPA). Environmental documentation and permitting is often completed in conjunction with the **Preliminary Design** phase described below.

Design

There are three major phases of design. The first is **Preliminary Design**, which is also referred to as the 25-percent submission. The major components of this phase include full survey of the project area, preparation of base plans, development of basic geometric layout, development of preliminary cost estimates, and submission of a functional design report. Preliminary Design, although not required to, is often completed in conjunction with the Environmental Documentation and Permitting. The next phase is **Final Design**, which is also referred to as the 75-percent and 100-percent submission. The major components of this phase include preparation of a subsurface exploratory plan (if required), coordination of utility relocations, development of traffic management plans through construction zones, development of final cost estimates, and refinement and finalization of the construction plans. Once Final Design is complete, a full set of **Plans, Specifications, and Estimates (PS&E)** is developed for the project.

Right-of-Way Acquisition

A separate set of Right-of-Way plans are required for any project that requires land acquisition or easements. The plans must identify the existing and proposed layout lines, easements, property lines, names of property owners, and the dimensions and areas of estimated takings and easements.

5. Programming (*Identification of Funding*)

Programming, which typically begins during the design phase, can actually occur at any time during the process, from planning to design. In this step, which is distinct from project initiation, the proponent requests that the MPO place the project in the region's Transportation Improvement Program (TIP). The proponent requesting the project's listing on the TIP can be the community or it can be one of the MPO member agencies (the Regional Planning Agency, MassDOT, and the Regional Transit Authority). The MPO then considers the project in terms of state and regional needs, evaluation criteria, and compliance with the regional Transportation Plan and decides whether to place it in the draft TIP for public review and then in the final TIP.

6. Procurement

Following project design and programming of a highway project, the MassDOT Highway Division publishes a request for proposals. It then reviews the bids and awards the contract to the qualified bidder with the lowest bid.

7. Construction

After a construction contract is awarded, MassDOT Highway Division and the contractor develop a public participation plan and a management plan for the construction process.

8. Project Assessment

The purpose of this step is to receive constituents' comments on the project development process and the project's design elements. MassDOT Highway Division can apply what is learned in this process to future projects.

Project Development Schematic Timetable

Description	Schedule Influence	Typical Duration
Step I: Problem/Need/Opportunity Identification The proponent completes a Project Need Form (PNF). This form is then reviewed by the MassDOT District office which provides guidance to the proponent on the subsequent steps of the process.	The Project Need Form has been developed so that it can be prepared quickly by the proponent, including any supporting data that is readily available. The District office shall return comments to the proponent within one month of PNF submission.	1 to 3 months
Step II: Planning Project planning can range from agreement that the problem should be addressed through a clear solution to a detailed analysis of alternatives and their impacts.	For some projects, no planning beyond preparation of the Project Need Form is required. Some projects require a planning study centered on specific project issues associated with the proposed solution or a narrow family of alternatives. More complex projects will likely require a detailed alternatives analysis.	Project Planning Report: 3 to 24+ months
Step III: Project Initiation The proponent prepares and submits a Project Initiation Form (PIF) and a Transportation Evaluation Criteria (TEC) form in this step. The PIF and TEC are informally reviewed by the Metropolitan Planning Organization (MPO) and MassDOT District office, and formally reviewed by the PRC.	The PIF includes refinement of the preliminary information contained in the PNF. Additional information summarizing the results of the planning process, such as the Project Planning Report, are included with the PIF and TEC. The schedule is determined by PRC staff review (dependent on project complexity) and meeting schedule.	1 to 4 months
Step IV: Design, Environmental, and Right of Way The proponent completes the project design. Concurrently, the proponent completes necessary environmental permitting analyses and files applications for permits. Any right of way needed for the project is identified and the acquisition process begins.	The schedule for this step is dependent upon the size of the project and the complexity of the design, permitting, and right-of-way issues. Design review by the MassDOT district and appropriate sections is completed in this step.	3 to 48+ months
Step V: Programming The MPO considers the project in terms of its regional priorities and determines whether or not to include the project in the draft Regional Transportation Improvement Program (TIP) which is then made available for public comment. The TIP includes a project description and funding source.	The schedule for this step is subject to each MPO's programming cycle and meeting schedule. It is also possible that the MPO will not include a project in its Draft TIP based on its review and approval procedures.	3 to 12+ months
Step VI: Procurement The project is advertised for construction and a contract awarded.	Administration of competing projects can influence the advertising schedule.	1 to 12 months
Step VII: Construction The construction process is initiated including public notification and any anticipated public involvement. Construction continues to project completion.	The duration for this step is entirely dependent upon project complexity and phasing.	3 to 60+ months
Step VIII: Project Assessment The construction period is complete and project elements and processes are evaluated on a voluntary basis.	The duration for this step is dependent upon the proponent's approach to this step and any follow-up required.	1 month
